Roman Motor duo recruits dealers

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

MIAMI — Two men at the center of last year's ill-fated attempt to sell Romanian-built cars in the United States have now teamed up to recruit dealers for a $70,000 French sports car.

Ole R. Spaten and John E. Trotman, key executives in a complex web of American and European firms that tried unsuccessfully to market cars as Roman Motor Corp. in 1986 and 1987, showed their new car and tried to recruit dealers at last week's South Florida Auto Show in Miami Beach.

They are seeking $91,800 in cash and recommending $125,000 letters of credit from dealers who want to sell the Venturi, a hand-assembled product of Manufacture de Voiture de Sport, built in Cholet, France.

While only a few dealers showed up at the Miami presentation, Trotman, who had been president of Roman Motor and is now president of newly formed North American MVS, said he had four dealer applications in hand and another seven had been handed out.

"We are real pleased with the show," Trotman said. "We didn't have anybody who didn't fall in love with the car. Some of them have been driving the car, and that makes it even better."

Spaten, now chairman of North

GM'S BACK?

Profits, products, players trigger talk of recovery

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — For two years, General Motors Chairman Roger B. Smith has sounded like a broken record:

GM — amid its massive revamping — is like a hockey team in the midst of player substitutions.

"I don't see many hockey teams scoring goals when they're making player changes," Smith has said repeatedly. But just wait until all the players take the ice.

It now appears that not only are GM's players on the ice, but they have scored their first goals in sales and profitability. However, the game is far from won.

GM's vehicle sales in October were up 16 percent compared with October 1987, and GM gained a point of car market share over last October. Inventories are low in some lines. Third-quarter profits set an industry record. Costs have fallen significantly. The company's U.S. car-market share has stabilized after a few years of steady decline. And quality has improved.

The consensus of GM watchers is that the worst is over. Yet they remain cautious.

GM continues to be the high-cost producer. Further plant closings are inevitable to cut costs. Market share is far short of GM's goal and past levels. Quality needs further improvement.

A stumble in the economy could set GM back as it introduces more new products in the next couple years than at any time in history.

And it's too early to tell what roughly $10 billion worth of investments in Saturn Corp., Electronic Data Systems and Hughes

Air quality fouls NUMMI truck plan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

While Toyota Motor Co. says it will soon decide where it will build pickup trucks in the United States, the decision may in fact rest with a California air quality board.

Automotive News has learned an application submitted two months ago to the Bay Area Air Quality Management District, to build 200,000 trucks annually at New United Motor Manufacturing Inc., has been deemed incomplete and sent back to the manufacturer. NUMMI is a joint venture between Toyota and General Motors in Fremont, Calif. The addition of the truck would nearly double the plant's output.

The plan would resurrect a second line in the plant that has been unused since the two automakers revitalized the former GM facility in 1984. GM produced both cars and pickup trucks in Fremont before closing the plant in 1981.

The plant currently produces Toyota Corolla sedans and the new Geo Prizm sold by Chevrolet.

However, California's stringent regulations on air pollution control, coupled with a rising tide of "no-growth" public sentiment in the state, threatens to make the expansion proposal a battle of politics and legal maneuvering.

California law requires that industrial projects be approved by local air quality management agencies. Fremont, 50 miles from San Francisco, falls under the jurisdiction of the nine-county Bay Area Air Quality Management District, which has had the NUMMI application under review since September.

According to the agency, the application has been classified "incomplete" and returned to the company for further information.

The district is questioning NUMMI's approach to controlling paint shop emissions.

A NUMMI spokeswoman said the company's two partners were still discussing possibilities for where,

Domestics spark Oct. sales gain

By Philly Murtha

October car sales rose 4.36 percent over 1987 because of incentives, high consumer confidence levels and positive economic indicators.

Last October was virtually an incentive-free month. In the latter part of the month, the effects of Black Monday's stock market crash were being determined.

Domestic cars accounted for this year's increase; import sales were down in October.

Michael Luckey, New Jersey-based automotive analyst, predicted last week that 1988 car and truck sales may be the third highest ever, but he noted, "in the near-term there will be more incenti in-

Diamond-Star fuels Chrysler-Mitsubishi sales battle

By Lindsay Chappell and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

NORMAL, Ill. — As Chrysler Corp. Chairman Lee Iacocca and Mitsubishi Motors Chairman Toyoo Tate dedicate the Diamond-Star plant Thursday and cars begin to roll out for their respective U.S. dealer networks, the two companies will be pitt per competition than ever be-

That competition will reach into Chrysler itself as that company's Jeep-Eagle dealers will later market both two-wheel-drive and four-wheel-drive versions of the Diamond-Star sport-specialty coupe, vying for allocation against Chrysler-Plymouth dealers who will sell 2wd Lasers.

The 1990-model coupe, called the Eagle Talon, will not be offered in a base version

Chrysler optimistic, eyes more minivans

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — The usually conservative Chrysler Motors has increased its U.S. vehicle sales forecast for the 1989 calendar year by 300,000 units, citing underlying strength in the economy.

In a wide-ranging interview, Chrysler Motors Chairman Gerald Greenwald also said that Chrysler is considering increasing production capacity for minivans because the company expects demand to exceed industrywide availability for several years.

Greenwald did not rule out the addition of a third minivan plant. However, the company is known to be considering other methods of boosting production, such as the three-crew approach.

Chrysler increased its industry sales forecast for 1989 because the factors that are sustaining strong fourth-quarter sales can be expected to continue into 1989, Greenwald said.

Chrysler is now basing its planning on a 1989 calendar-year sales forecast of 10.2 million cars and 5.1 million trucks, up from its previous forecast of 10.0 million cars and 5.0 million trucks.

Accounting shift perils earnings

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Sparks are expected to fly early next year when companies respond to a proposed accounting change regarding health benefits that could slash automakers' reported earnings by billions of dollars beginning in 1991.

Automakers would be among companies hardest hit by the change.

The proposal by the Financial Accounting Standards Board would require companies to report the cost of health-care benefits for retirees as those benefits are earned. Most companies don't set assets aside to cover those benefits.

Hardest hit would be "companies in mature industries who have either a large working population and/or a large retiree base receiving good benefits," said Jeff Bergeron, who is in charge of Arthur Andersen & Co.'s audit manufacturing practice.

"We're still trying to tote up the figures. (The accounting change) will cost us somewhere in the neighborhood of half a billion to three-quarters of a billion dollars at our current level of operations," said Chrysler Corp. Vice Chairman Robert S. Miller Jr.

"When the standard is implemented, that could be closer to a billion dollars of additional reported expense, though the underlying economics will remain the same," Miller said.

"Putting the liability for all those future health care benefits on the balance sheet — and the total amount, we think, equals or exceeds the current tangible net worth of the Big 3 auto companies — we may well have the entire industry end up with zero tangible net worth," said Miller.

"That will raise a question of our credit-worthiness," he said.

"But the overriding concern is that the social implications of making this change would be to place undue pressure on companies that provide good jobs with good benefits. It would provide an incentive to move to Canada where health care benefits are subsidized by the government. It would also be an investment incentive to foreign investors, whose accounting standards are taken care of by

Ford's 3-year string of sellout launches — Taurus, Continental and Probe — is the best run Petersen can remember in his 40 years with the company

Kudos and caution

Petersen reviews Ford past, looks ahead

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — As would most any coach who has endured some dismal seasons, Donald Petersen knows the importance of keeping a streaking team on guard.

During an interview last week, the Ford Motor Co. chairman generously sprinkled his conversation with tributes to teamwork and the need for continuous improvement — two favorite themes at Ford these days. And he was careful to include a blend of back-patting and caution as he discussed Ford, the industry and the future.

For example:

- Ford's three-year string of sellout product launches — Taurus, Continental and Probe — is the best run he can remember in his 40 years with the company. Whether that continues is by no means certain; it is an "extremely important" question facing Ford.
- Ford has made huge strides in quality and other areas this decade. But that record won't be good enough. "There's far more to be mined than we've mined to date."
- He called Ford's partnership with Mazda the finest in the business. And though Ford also has formed links with Nissan and Volkswagen, it may well join forces with other companies in other ventures as it attempts to stay competitive in a global industry.
- General Motors — with its size, resources and people — will be a "formidable" competitor. But Ford will be out to prove that you don't have to be the biggest to be the best.

Petersen also offered peeks at various aspects of the future. Next year will be a good one for Ford and the industry. He predicted that Ford's transition to a new chairman in 1991 will be carried off with little more than a yawn. And he spoke enthusiastically about Ford's and the entire industry's potential through the 1990s and beyond.

"It's quite a race," he said of today's competitive automobile market. Customers "are receiving the benefits of this intense world-

Democrats attack dealer PAC outlays

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Charging that an import auto dealer political action committee has exceeded campaign spending limits in a Florida Senate race, a Democratic campaign committee asked the Federal Election Commission to pull the dealer ads off the air.

The Democratic Senatorial Campaign Committee characterized spending by the Automobile Dealers and Drivers for Free Trade PAC as "blatantly partisan" and accused it of hurting the chances of Democratic Senate candidates in Florida and four other states.

The campaign committee was expected to seek an injunction in a Florida court against the ads.

Frank Glacken, executive director of Auto Dealers and Drivers for Free Trade termed the charges "a political nuisance. The Democrats have been trying to intimidate us all week. What we have are a couple of close Senate races where our ads have been making a difference. We have closed up the race in Nevada and Florida and the Democrats don't like it. Now they are trying to take away our First Amendment rights."

Tom Nemet, a Jamaica, N.Y., car dealer and chairman of the import dealer PAC, used stronger language. "If the Democrats get a friendly judge to take our ads off the air in Florida, we are prepared to go directly to court," he said. "There is no way the FEC is going to side with them."

Nemet said Auto Dealers and Drivers for Free Trade "is a completely bipartisan organization. We have an issue, and that issue is free trade. We support candidates that support our issue."

Nemet estimated his group will have spent $1.5 million in direct campaign contributions, $1.6 million in independent expenditures and another $200,000 in "get-out-the-vote" drives by the time the 1988 election is over. He added his group may have spent an additional $500,000 on advertising in Florida over the weekend because "the Florida dealers are pissed about this and they want us to put more money in there."

According to Federal Election Commission records, Automobile Dealers and Drivers for Free Trade is an independent political action committee, not affiliated with any other dealer organization.

The Democrats charge the PAC violated an election law that allows expenditures of over $5,000 by a political action committee only if the expenditures are "made independently of the beneficiary and its agents." The complaint alleges that the dealer PAC and Republican Connie Mack's campaign used the same media buyer and direct-mail consultant to spend $300,000 in dealer campaign money.

"These shared agents present a presumption of coordination and would mean that the efforts of the foreign car dealers violate the test of independence," the Senate Democratic Campaign Committee said.

Answering the charge in a prepared statement, Nemet said, "We have consulted with our lawyers at every step and have scrupulously honored the law in every respect.

"The DSCC's action is nothing more than a politically charged effort by Democratic political bosses in Washington to intimidate us. It won't work. In fact, we may well increase our expenditures to help elect Republicans who understand the importance of free trade to our nation's prosperity."

Bob Chlopak, executive director of the Democratic Senatorial Campaign Committee, accused the import dealers of "making vast so-called independent expenditures, as much as $1 million, to elect Republican Senate candidates in five states, all of which have close Senate races. The states are California, Florida, Mississippi, Nevada and Wyoming."

Chlopak said the dealer PAC was engaged in a "massive and systematic campaign . . . to influence the outcome of close Senate races in a blatantly partisan manner." As a result of that activity, Chlopak said, "their claims of independence invite skepticism and disbelief."

Nemet disputed Chlopak's characterization, saying Auto Dealers and Drivers for Free Trade had used media buyers that are established dealer advertising firms in each state. He said dealers are well-versed in marketing practices and the PAC's activities reflect that.

Nemet also said Auto Dealers and Drivers for Free Trade had decided last week to pull ads in California "because Pete Wilson (the Republican senator up for re-election in California) is doing so well he doesn't need our help."

Don't ignore rest of world, U.S. makers told

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS, Nev. — No matter how good you think you are, there will come a day when someone will beat you, whether in business or in auto racing.

Former Formula One racing champion Jackie Stewart, speaking in his role as a consultant to Ford Motor Co., told attendees at the Specialty Equipment Market Association/Auto Internacional Association show that American cars and components are better than ever — in many cases better than the foreign competition.

But if manufacturers avoid the long-term view and ignore international markets, they run the risk of failure.

The European motor industry, Stewart said, is at risk of becoming overconfident, but the Japanese and other countries are still hungry and creative, Stewart said.

The American motor industry, he said, has a new vitality and no longer builds "the overweight, over-embellished motorcars that handled like pregnant elephants." But a lack of an international view, Stewart warned, may hurt American manufacturing in the long term.

"If you don't go out and sell your products in other markets, someone else will," he said. "The motor industry is fantastically vital in every country. Every country potentially needs what you have to sell. There are enthusiasts in every corner of the world. Wherever a wheel turns, there is a race or rally, a hill climb, a drag race or a street race taking place. The market is there. The demand is for quality."

Ford was the featured manufacturer at the show, which attracted 1,013 companies selling mostly performance-oriented automotive components for domestic and import cars.

Also at the SEMA show, Chevrolet introduced its NASCAR Winston Cup racing version of the Chevrolet Lumina coupe. The Lumina racer will be allowed to race in May 1989 when production versions of the GM10 coupe become available for sale at dealerships, according to Herb Fishel, director of Chevrolet special products. The first race of the year is the Daytona 500 in February, and racers will have to use the old Monte Carlo style body until May.

The Lumina sedan is scheduled to be available for sale in late January, Chevrolet said.

Although Lumina prices have not been officially set, a Chevrolet engineer said plans call for the base coupe and four-door sedan to be priced the same, at $200 below the base Ford Taurus, which currently is $11,778.

The Lumina will also be offered in an uplevel Eurosport version, the engineer said.

The Lumina sedan, he noted, is 10 inches longer than the Taurus and six inches longer than other GM10 models.

General Motors service parts operations announced it will distribute performance parts from all GM divisions under the GM Performance Parts logo from a new catalog.

"In addition, some groups of these parts and accessories will be made available to the aftermarket through our traditional and retail distribution channels," said Richard J. Sherman, general director of U.S. service parts operations sales and marketing.

B-O-C cuts cost $1,300 a car; goal is $2,230

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. — General Motors' Buick-Oldsmobile-Cadillac Group has slashed more than $1,300 from the cost of building each car.

J.T. Battenberg III, who was named B-O-C group executive in July, said that since 1986, the group has reached nearly 60 percent of its goal of cutting $2,230 of cost from each car it builds, putting the group ahead of schedule for meeting its 1990 deadline.

Battenberg said B-O-C has identified areas that will account for more than half of the remainder of the cut, and those cuts will be implemented in the next year.

"The job is not finished yet," Battenberg said. "It's going to be very challenging, but we feel confident that we not only can, but must, accomplish it."

Battenberg expects Attachment C of the UAW contract with GM to help B-O-C make further progress in cost and quality. Attachment C requires that plant management and local union representatives devise detailed plans for making their plant competitive in every aspect.

"They are very comprehensive, covering the whole business of the plants — from productivity, quality, enhancement of the product to the future of the organization," Battenberg said.

Battenberg and Donald Ephlin, UAW vice president in charge of the GM department, have reviewed the plans from B-O-C's 10 assembly plants and 26 manufacturing facilities. Once they are approved, implementation begins.

"There will be a continuous process of review by the UAW and management over time," Battenberg said. "We'll just continue to work through that process until we obtain the world-class standards and objectives we've established."

Each manufacturing and engineering division within B-O-C has a specific dollar goal for cutting costs; the $2,230 is an average for the four manufacturing divisions.

For example, the Flint automotive division, which Battenberg headed until his promotion in July, has attained about 60 percent of its goal of cutting $2,500 per vehicle and has identified 80 percent to 90 percent of the remainder. The Flint division produces C- and H-cars at assembly plants in Orion Township, Ypsilanti (Willow Run), and Flint (Buick City), all in Michigan; and in Wentzville, Mo.

AUTOMOTIVE NEWS/JOE WILSSENS

Battenberg: "We're setting new records each month with our customer satisfaction index"

The C-cars are Buick Electra, Cadillac DeVille and Fleetwood and Oldsmobile 98. The H-cars are Pontiac Bonneville, Oldsmobile Delta 88 and Buick LeSabre.

The Lansing automotive division, meanwhile, is halfway to its goal of cutting $1,800 from each car it produces. The division produces J- and N-cars at plants in Lansing, Mich.; Lordstown, Ohio; and Janesville, Wis.

The J-cars are Chevrolet Cavalier, Pontiac Sunbird and Buick Skyhawk. The N-cars are Pontiac Grand Am, Buick Skylark and Oldsmobile Cutlass Calais.

The B-O-C powertrain division and Cadillac, which operates both the Reatta Craft Centre in Lansing and the Detroit-Hamtramck plant, where GM's luxury cars are made, also have goals, but they have not been revealed publicly.

While cutting costs, B-O-C has boosted quality dramatically, Battenberg said. Internal audits show monthly improvement, he said. Cars produced at the Buick City complex in Flint have topped the quality list, even surpassing cars built at the GM-Toyota joint-venture plant, New United Motor Manufacturing Inc., which traditionally maintained the No. 1 ranking.

"We're setting new records each month with our customer satisfaction index," Battenberg said. "We've been seeing the improvements; now we're seeing the hard facts to support them."

Public perception of the improved quality has yet to catch up with reality, Battenberg said. However, he sees that changing.

"We are seeing the critics finally beginning to say we were right," he said. "We knew our products were improving. Now it's beginning to be documented."

Battenberg points with particular satisfaction to the most recent survey by J.D. Power and Associates of Agoura Hills, Calif. Power's highly publicized quality and customer satisfaction surveys had been a frequent reminder of GM's failings with customers.

But a Power survey published in September ranked Cadillac, Buick and Oldsmobile seventh, eighth and ninth, respectively, in product quality. The three surpassed Honda, which fell to 10th place, and were the only domestic nameplates among the top 10.

Battenberg said work on the Attachment C plans has been beneficial beyond quality and cost improvement.

"If nothing else, they've allowed everyone to talk on a common plane about the business and the degree of difficulty the business is going to face in the future," he said. "It's no longer speculative or subjective; it's objective. It reduces the business to meaningful, quantitative elements."

Through the process, the union has become a true partner in the business, he said. A UAW representative attends Battenberg's monthly staff meetings, for example.

"The whole way to run a business has changed," he said. "They are invited to participate in discussions and debate that surround the business."

Battenberg admits it is difficult for some managers to accept that new role for workers.

"It's very difficult for those who are authoritative in their style and are not used to sharing or who are not willing to use participative management," he said. "We're trying to sort those people out."

September sales rise 7% for Big 3 cars in Canada

Despite continuing predictions of a slowdown in Canadian car sales, the Big 3 posted a combined increase for September and the year-to-date period.

Big 3 car sales were up 7.19 percent for the month and 2.43 percent for January-September, compared with a year ago.

Also, total sales of domestic and imported cars and trucks rose 2.31 percent for the month and 2.90 percent for January-September.

Chrysler posted the largest car-sales gain for the month with a healthy 21.34 percent rise in its North American-built cars.

Fourteen of the 18 import car makes suffered sales declines in September. Yet, three of the importers that showed gains posted significant increases: Chrysler's imports were up 38.68 percent; Toyota, 24.02 percent; and Honda, 22.62 percent.

Among the losers in import sales, GM was down the most on both a unit and percentage basis, plummeting 59.66 percent. The decline was due largely to the expiration of a Chevrolet Sprint/Pontiac Firefly incentive program. GM's year-to-date import sales, however, were 15.55 percent ahead of 1987.

Other losers were Suzuki, down 50.98 percent for the month; Volkswagen, 36.98 percent; Subaru, 35.64 percent; Ford, 32.03 percent; and Hyundai, 29.01 percent.

Overall, sales of North American-built cars, including Honda and Volvo, increased 9.10 percent for September and 2.93 percent year-to-date. Import sales slipped 13.81 percent compared with September 1987, and 5.74 percent compared with the first nine months of 1987.

Total car sales were virtually identical to last year's figures, both for September and for ninemonths. Sales were down a miniscule 0.47 percent for September but up 0.06 percent for the year.

Total domestic and import truck sales were up a healthy 9.11 percent for the month and 8.01 percent for the year.

Domestic-truck sales continued to boom, led by Chrysler on both a unit and percentage basis. Chrysler was up 21.23 percent for September and 47.58 percent year-to-date. September was Chrysler's 19th consecutive record month.

Ford was up 6.91 percent for the month, and GM, with its best September truck month in nine years, rose 6.22 percent.

Import-truck sales were mixed, with four of eight importers reporting higher sales. Among the volume truck importers, Nissan gained 14.00 percent for September but was down 8.46 percent for the nine-month period. Toyota's sales were down 13.26 percent for September and 4.52 percent year-to-date.

cluding General Motors, have geared-up fourth quarter production schedules.

Dealers surveyed had a variety of viewpoints. Some were worried about their inventories. "Sales are fabulous, but our inventory is really low," said David Lee, general sales manager for Golden Oldsmobile, Port Richey, Fla.

Sales and inventories were off sharply in October for Fairfax Chrysler-Plymouth, Fairfax, Va., according to Tony Cueva, sales manager. And at Santa Monica (Calif.) Ford, owner and general manager Bob Karlin said he had about a 90-day supply but inventory was uneven and he needed more Mustangs and Probes.

MARKET SHARES, OCT. 1988

IMPORT	242,448	29.13
TOTAL	832,263	100.00

In October, new domestic and imported car deliveries rose 4.36 percent to 832,263 from 797,500 sold in October 1987.

Sales of U.S.-built cars climbed 12.59 percent to 589,815 compared with last year's 523,876. Six of the seven domestic carmakers reported gains. Nissan was the only loser.

Import-car sales were the inverse of domestic deliveries in October. They fell 11.39 percent to 242,448, compared with 273,624 a year ago.

The Big 3's share of the U.S. car market rose 5.22 percentage points in October. With their captives, they took 68.75 percent of the market compared with 63.53 in October 1987.

General Motors' share including captives climbed a point to 34.97 percent compared with 33.97 percent a year ago. Ford gained 3.75 percentage points to 22.42 vs. 18.67 percent in 1987. Chrysler Motors' share with captives rose to 11.36 percent vs. 10.91 percent in 1987.

Foreign carmakers' share dropped to 31.25 percent in October compared with 36.47 percent last year. The Japanese import share slipped 3.44 percentage points to 23.92 percent from 27.36 percent a year ago. European carmakers' share dipped 1.13 points to 5.38 percent from 6.51 percent and the Korean share edged down about half a point.

October began with two upbeat 10-day domestic sales periods and an overall gain of 24.51 percent. But in the final 10-day period, U.S.-built car sales slipped 4.04 percent.

For the month, the Big 3 reported healthy increases in deliveries of domestic cars.

Ford's U.S.-built car deliveries surged 24.50 percent; Chrysler's rose 9.07 percent and GM's were up 8.08 percent.

Transplants Toyota, Honda and Mazda also reported solid gains in October. Toyota sold 44.65 percent more U.S.-built cars than it did last year; Honda was up 16.64 percent; and Mazda increased its domestic deliveries nearly 20-fold. Last October, it was just starting to sell cars made in the United States.

Among the imports, Honda's upscale Acura Division sales were virtually flat, and deliveries of Honda's imported Civics and Accords dropped 28.34 percent.

PRODUCTION

Car output for month is 6-year low

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production totaled 667,208 in October, the lowest for that month since 1982 when 415,197 were built.

The 1982 total was affected by downtime at several plants for inventory adjustment and model changeover.

Last month's output was 7.16 percent more than September's 622,616 but was slightly below (0.61 percent) the year-ago month's 671,316.

Last week's scheduled assembly of 165,505 cars was 1.96 percent more than the prior week's 162,323 and 4.72 percent more than the year-ago week's 158,044.

Automakers built their six-millionth car of the year last Friday, one day behind 1987. So far this year, 6,027,376 cars have been assembled, 1.49 percent below 6,118,681 a year ago.

Companies shared last week's targeted production as follows: General Motors, 51.69 percent; Ford Motor Co., 23.53 percent; Chrysler Motors, 14.80 percent; Honda of America Manufacturing Inc., 4.53 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.45 percent; Nissan Motor Manufacturing Co. U.S.A., 1.24 percent; and New United Motor Manufacturing Inc., 0.76 percent.

October's truck output of 355,438 dipped 1.82 percent from the September total of 362,011 and fell 3.78 percent from the year-ago month's 369,394.

Last week's estimated truck build of 85,542 dropped 4.25 percent from the previous week's 89,339 but increased 11.93 percent over the year-ago week's 76,424.

Chrysler said it will end production next March of the Chrysler LeBaron and Dodge Lancer four-door hatchbacks built at its Sterling Heights, Mich., plant. The plant will continue to build the Plymouth Sundance and Dodge Shadow.

Canada notches truck record

Canadian truckmakers built 84,627 units in October, the most ever for that month. The previous record was 71,080 in 1987.

However, last month's production dipped 1.28 percent from the September total of 85,723, which was a record for that month.

October truck output increased 19.06 percent over the year-ago month's 71,080.

Last week's scheduled production of 21,350 trucks was slightly below the prior week's 21,471 but was 29.28 percent more than the year-ago week's 16,515.

Car output for October totaled 86,563, 1.79 percent more than the preceding month's 85,038 and 11.30 percent more than the year-ago month's 77,771.

Automakers targeted production of 21,071 units last week, 6.20 percent below the previous week's 22,463 but 19 units more than the year-ago week's 21,052.

So far this year, 904,301 cars have been completed, 36.64 percent more than the 661,830 built last year at this time.

Top dealer, Peugeot hurl stiff charges

Incentive fraud, sales lies alleged

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

LYNDHURST, N.J. — An attempt by Peugeot Motors of America to terminate its top dealership for collecting incentives for cars that were not sold has sparked a counterclaim that the French importer is lying about its sales figures.

Peugeot, while denying it condoned or encouraged false reporting of sales, promised in a prepared statement that it would investigate the charges.

Peugeot filed suit against Exotic Motors of Redmond, Wash., in U.S. District Court in Seattle on Oct. 18, asking for damages of more than $300,000.

The suit charges fraud, breach of contract and racketeering. It claims the dealership collected more than $100,000 in incentive rebates from Peugeot for cars that were never sold or were sold after retail delivery records had been turned in.

The defendants, Stavros Michelakis and his partner, Nick P. Diafos, filed a counterclaim, supported by affidavits from two current Peugeot dealers, alleging that Peugeot dealer representatives frequently asked them to turn in retail delivery records on cars that hadn't been sold.

Dealer representatives allegedly used the numbers to meet their sales targets, and Peugeot allegedly used the higher numbers to prop up its allocation of cars from France and to exaggerate the company's success, the defendants said.

"We always understood that the reason why our dealer representatives were recommending to us

Greenwald is Iacocca heir

Chrysler's exec shuffle sets stage for life after Lido

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — In the wake of a corporate reshuffling at Chrysler Corp. last week, Lee Iacocca said he expects to remain company chairman for three more years but will spend more time on the "people part" of the business.

"Time marches on and you've got to have a good succession plan that has got some stability in it," Iacocca said in an interview a day after the reorganization was announced.

"I think I will stay the three years and then after that I don't want to be carried out of here trying to run the company and not let the other guys take over. That's why I'm disciplining myself with the board to say here it is."

Under the restructuring announced Thursday, Gerald Greenwald, who has served as chairman of Chrysler Motors for three years, becomes the heir apparent to Iacocca when his contract expires 1991.

In a parallel move, Robert A. Lutz, named president of Chrysler Motors, is positioned to head the company's vehicle-making subsidiary in the post-Iacocca years.

Iacocca said that in his remaining years as chairman he will "spend more time on organization and people.

"Not just recruiting but communications. We've got to do better at that," he said.

"We just had an employee survey where people had a lot of questions that haven't been answered. I've just talked to 180 of our top communicators corporate-wide to give them a sendoff on what their jobs are and how important it is that people right down the line understand what we are and what we stand for," Iacocca said.

Iacocca said the corporate restructuring gives him "the next three years to try to really push down this responsibility and accountability" to a level where the people who will eventually run the company can prove themselves.

Iacocca said an internal document has been prepared which outlines "line by line" the jobs of Chrysler's top executives.

"It's defined and in the end it's to make them accountable for meeting their objectives as delineated.

"I think it will clear things up a lot and be accepted well. At the same time if they all do their homework and do well and perform

Olds truck proposal hits dealer nerve

By Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors may sell a truck-type vehicle, possibly a four-door version of the Chevrolet S-10 Blazer or a version of the Chevrolet/Pontiac all-purpose van, through Oldsmobile dealers.

No such product program has been approved yet by GM's top executives, though it is expected to come before GM's executive committee soon.

Nevertheless, discussion of the proposal already has set off a stormy protest by GMC and Chevrolet truck dealers who don't want other GM divisions selling sport-utility vehicles that compete against models they sell.

GM is considering a variety of truck-type vehicles to be sold through Oldsmobile, but those receiving the most serious consideration are a version of the four-door Chevrolet S-10 Blazer — sold as the S-15 Jimmy by GMC dealers — and a version of the APV. A four-door Blazer/Jimmy is due in the 1991 model year; the APV goes into production as a 1990 model in the spring of 1989.

Under the Oldsmobile proposal, the vehicles would not be changed substantially. They would be badged as Oldsmobiles, renamed and interiors would be upgraded to fit Oldsmobile's upscale image. The four-door Blazer, for example, would likely contain more car-like features, including leather upholstery, than their Chevrolet and GMC counterparts.

GMC and Chevrolet truck dealers have launched a nationwide letter-writing campaign to GM's top brass in an effort to keep the four-door sport-utility Blazer and Jimmy exclusive to their divisions and prevent increased competition among GM makes.

GMC and Chevrolet dealers recently received a letter from John Bergstrom, Chevrolet Dealer Council chairman; Roland Faricy, GMC Dealer Council chairman; and Larry Carter, Chevrolet-GMC line representative for the National Automobile Dealers Association. The letter urged them to write GM Chairman Roger Smith and six other top GM executives to protest the Oldsmobile proposal.

Carter, a Las Vegas, Nev., GMC dealer, said last week that the corporation "has been receiving a ton of letters" from Chevrolet, GMC Truck and Oldsmobile dealers expressing outrage at the proposed spinoff of the four-door sport-utility vehicle. Some Olds dealers

PRIZES: *Incentives play role in auction field, too*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Dealers nibbled on lobster, shrimp, oysters and clams at a special promotion hosted by the Florida Auto Auction of Orlando, while roast moose led the menu at the Southern California Auto Auction.

At the Auto Dealers Exchange in Indianapolis last month, dealers stuffed themselves on roast pig. The Harrisburg Auto Auction in Pennsylvania, meanwhile, plied nearly 900 dealers with chicken dinners — the fryers weighed in at more than three tons.

There is still such a thing as a free lunch and, sometimes, a free breakfast. They are drawing cards auctions use to lure dealers.

Yet they are small potatoes compared to the trove of giveaways offered by the industry at the weekly sales.

Drawings for cash, cars, appliances and even cowboy hats and golf clubs have become part of the carnival-like fanfare surrounding the auction industry.

Sometimes the incentives are straightlaced business deals. Alamo Rent A Car offers delayed payment for cars purchased at auctions for up to 45 days.

Even the automakers sometimes offer incentives, including transportation assistance for vehicles

Bush team awaited by auto leaders

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automakers and new-car dealers for the most part welcomed George Bush's election to the presidency last week, showing little concern for expanded Democratic majorities in the House and Senate.

"No surprises," is how Jimmy Payton described last week's election results. Payton, president of the National Automobile Dealers Association, said, "In speaking with dealers around the country, I would say that a vast majority favored George Bush. His election is welcomed by the dealers."

Two of the Big 3 also hailed the Bush victory, offering polite congratulations to the winner.

General Motors Chairman Roger Smith said, "We congratulate the president-elect and look forward to working with him and his administration on the many important issues affecting our industry.

"Now that the people have spoken, it is vital that we all work together for the good of the nation and the economy."

AUTOMOTIVE NEWS/JOE WILSSENS

George Bush: the winner

ELECTION 88

Ford Motor Co. Chairman Donald Petersen said, "We congratulate Vice President Bush and Senator Quayle on their election. We hope that one of their top priorities will be to address the budget and trade deficits as well as other aspects of international competitiveness so vital to the nation's future."

Chrysler Corp. Chairman Lee Iacocca, who has had his differences with the Reagan administration over trade policy, did not comment on the election.

The new president of Chrysler Motors, Robert Lutz, said, in Washington last week, "Despite George Bush's landslide, I think most people are more relieved that the campaign is over than they are elated or dejected about its outcome."

The UAW, which had backed Dukakis, has "mixed feelings" as to whether Bush's election represents a setback for organized labor, according to Stephen Yokich, a UAW vice president. "I think we had a mainstream message of fairness for the working man and woman and we advanced our majorities in the House and Senate," he said.

George Neild, president of the Automobile Importers of America, said his group "congratulates the winner," but has a practice of not commenting on U.S. elections.

Although the importers were circumspect in their comments on the election, clearly they favor a continuation of the Reagan administration's more relaxed attitudes on trade. Dukakis, in the closing

Diamond-Star hit could kill sedan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NORMAL, Ill. — As Diamond-Star Motors officially opened last week, company officials at the dedication ceremonies said they've informally discussed adding an engine and sub-component assembly plant at the site.

And plans to add four-door sedans at the plant may be shelved if demand outstrips planned production for the two-door sport coupe that will be sold by Mitsubisihi as the Eclipse and Chrysler as the Plymouth Laser and Eagle Talon. The Mitsubishi and Plymouth coupes bow in January.

The ceremonies for the $650 million facility set the joint venture on its long way toward building 240,000 vehicles a year.

While Diamond-Star's newly designed Plymouth Lasers and Mitsubishi Eclipses dribble out at a rate of five vehicles an hour, plant managers are speaking confidently of the new relationship. Diamond-Star President Yoichi Nakane noted that expansion plans including the engine and sub-component operations have been casually discussed.

Plans call for the plant to produce 37,000 vehicles for each parent company in the first year from Job 1. Production of Laser and Eclipse will be expanded next spring to include a four-wheel-drive version, and later in the year, both two-wheel-drive and 4wd versions will be sold by Chrysler's Eagle network as the Talon.

The 50-50 partnership will divide production evenly as the volume increases and more models are added to the line.

At the dedication last week, Chrysler Corp. Chairman Lee Iacocca hailed the operation as a new symbol of U.S.-Japanese economic cooperation. Iacocca was joined by Mitsubishi Motors President Toyoo Tate, Japanese ambassador Nobuo Matsunaga and Illinois Gov. James R. Thompson in sounding the recurrent theme of stronger U.S.-Japanese economic and cultural relations.

"We're cutting the ribbon on a whole new era for Chrysler, for Mitsubishi, for this state and maybe even for all America," Iacocca said. "Projects like this one will go a long way toward solving the problems between the United States and Japan."

"This plant is a clear testimony to the new way that international economies are moving," echoed Matsunaga.

While the company has plans to produce Mitsubishi Mirage and Eagle Summit sedans next fall, that production may be shelved if demand for Laser, Eclipse and Talon is higher than expected. Officials say the plant's top priority will be meeting the as-yet-unknown demand for the sport coupe. If necessary, Mirage and Summit production would remain in Japan.

"Flexibility is a key here," said Diamond-Star Chairman G. Glenn Gardner. "That's what we're learning from Mitsubishi. They're a smaller company. They've had to learn to operate effectively with smaller plants and smaller production runs in Japan."

While dignitaries spoke of U.S.-Japanese relations on an international level at the dedication ceremony, Gardner said his more immediate concern is mastering them on the factory level. Gardner and Nakane share in managing the venture, which will employ 2,900 when full production boosts output to 63 cars an hour. The project has introduced new philosophies to both Japanese and American managers.

"People hear me say that we share in the management, and they ask, 'Yeah, but who really manages?' " Gardner said. "Nakane and I learned very quickly that we must manage by consensus. If a decision has to be made, we reach it together."

In practical terms, consensus management means starting every day at the plant with a meeting of Diamond-Star's eight-man board of directors. The board convenes at 7 a.m., thirty minutes before work begins in the plant. All matters are opened for discussion, and all matters are discussed until a consensus is reached, the chairman said.

"It takes forever to make a decision sometimes, but then once we make one, we don't have to make it over three or four times," Gardner said. "We don't go through a lot of changeovers here."

CALIFORNIA: *Court delays insurance rollback; car sales steady — for moment*

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — California new-car dealers don't believe auto insurers' threats to withdraw from the state following approval of a rate-rollback referendum.

But they are concerned about a possible short-term sales slowdown. Collision insurance is required to get a vehicle financed.

"We haven't seen even the slightest indication that anyone isn't buying a new car because he can't get insurance, but it's early," said Jay Gorman, executive vice president of the 900-member Motor Car Dealers Association of Southern California.

Major automakers said their California dealers have not expressed any alarm, though most are tracking developments. Ford Motor Co. surveyed state dealers and checked with Ford Motor Credit Co. to determine if the referendum has had any effect on sales.

Ford initiated the survey after one dealer called, but later discovered he was the only dealer contacted who was concerned with the issue.

The California Supreme Court temporarily blocked enactment of Proposition 103 two days after California voters approved the Ralph Nader-backed measure, which forces a 20-percent cutback in all insurance rates — especially auto coverage.

Six underwriters said they would withdraw from the state, although most of the hundreds of insurers active in the United States' largest insurance market said they would continue business as usual pending outcome of the legal challenges.

"We had a normal sales day Wednesday and there have been no canceled orders today because people can't get insurance," said Doug Fuller, who operates a Ford dealership in Chula Vista. Nor has he heard of any problems — so far — from the 116 dealers who elected

GM skips seat-belt kit for some '78-'88s

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Although General Motors will offer rear-seat shoulder harnesses on all domestically made 1989 models, it will not offer shoulder belt retrofit kits for certain 1978-88 cars.

GM's decision not to provide retrofit kits for Chevrolet Monte Carlo, Oldsmobile Cutlass, Buick Regal and Pontiac Grand Prix models has drawn fire from the Center for Auto Safety.

The center says the move runs counter to NHTSA's position that a regulation requiring the belts is unnecessary because automakers offer them as an option. NHTSA also says the regulation isn't needed because virtually all carmakers say rear shoulder harnesses will be standard equipment by the early 1990s.

The consumer group criticized the GM service bulletin dated May 20, 1988, announcing the change. "GM safety engineers have concluded that in (the 1978-88 G-bodies and GM-10 cars), a rear-seat lap/shoulder belt combination would not enhance the safety offered to rear-seat occupants by the lap belt alone," the bulletin says.

Studies have shown shoulder harnesses greatly improve safety for rear-seat passengers.

All cars made since 1972 are required to have anchors for rear shoulder belts so consumers have the option of installing the harnesses. But the availability of retrofit kits, which can cost up to $300 installed, is often subject to dealer and factory inventory.

A GM spokeswoman said the decision not to provide the kits "is an engineering question."

In a letter asking NHTSA to investigate the GM decision, Clarence Ditlow, the center's director, quotes a 1987 letter from NHTSA Administrator Diane Steed that said, "General Motors is already offering such kits to the public through its dealers . . . NHTSA has encouraged manufacturers to offer well-designed retrofit kits for those customers who desire them, and we will continue our efforts in that regard."

In response to Ditlow, NHTSA Chief Counsel Erica Jones said, "The fact that retrofit kits are not available for all model lines produced by each manufacturer does not suggest some failure on the part of the vehicle manufacturers or of our policy.

"If a manufacturer makes a good-faith determination that it is not appropriate to make retrofit kits available for certain past models, that determination presumably reflects a thoughtful consideration of the characteristics of those individual models. We have no reason to question General Motors' determination with respect to a few of its past models."

Colonel Sanders out of question

LYNDHURST, N.J. — Want to equip your spanking-new Rolls-Royce or Bentley with picnic trays at the rear of both front seats? The importer will be glad to oblige, but you'd better bring your checkbook.

Picnic trays are among the few options for the ultra-luxury British motorcars. The tab is $3,050. The buyer, presumably, supplies the Moet Chandon and Beluga to grace the trays.

Convertibles can be fitted with "cocktail requisites" — a set of glasses and a tiny flask — for $1,250, and silver-inlaid waist rails for the interior of all models are $4,365. The rails are thin silver lines that follow the contours of the wood.

For that open-air feeling in a sedan, a sunroof is offered for $6,650.

And don't pass up the burglar alarm.

It's a steal at $1,110.

GM10 incentives grow

Offers aimed at T-bird, Cougar owners

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Buick, Pontiac and Oldsmobile have added more consumer incentives to their GM10 cars by offering cash rebates and low interest rates to entice Ford Thunderbird and Mercury Cougar owners.

In addition, Oldsmobile is offering two round-trip airplane tickets in the Central region and a year's supply of gasoline in the Eastern region to all purchasers of 1988 or 1989 Cutlass Supremes.

Meanwhile, Ford sweetened its consumer incentive program by including 1989 Tempo and Topaz models and increasing rebates on compact trucks.

BUICK: This month, Buick is offering a choice of $750 or 7.5 percent GMAC financing for up to 48 months on 1989 Regals to 317,000 Thunderbird and Cougar owners.

Buyers also will receive pre-approved credit of up to $13,500 or 95 percent of the manufacturer's suggested retail price toward the purchase of a 1989 Regal.

In September, Buick mailed about 350,000 incentive pieces to selected Thunderbird and Cougar owners. The mailing offered $100 to test drive a Regal and a $500 rebate on the purchase of a Regal. No dealer financial participation was required. The program ran Sept. 1-30.

Buick now is recontacting the Thunderbird and Cougar owners who did not respond to the September offer and offering them $50 to test drive a Regal. The non-respondents to the September program also will be eligible to receive the $750 rebate or 7.5 percent financing for up to 48 months. Again, there is no dealer financial participation charge. Customers must take delivery by Nov. 30.

The incentives are in addition to to a $750 consumer rebate offered to all buyers of Regals until Dec. 31. Thus, a Thunderbird-Cougar owner who buys a Regal gets a $1,500 rebate.

FORD MOTOR CO.: Ford expanded its consumer rebate program Nov. 9, adding two models to its incentive lineup and increasing incentives on selected compact trucks.

Buyers receive a $400 rebate on all 1989 Tempo and Topaz models, $400 on 1988 Topaz and $300 on 1988 Tempo. The program ends Dec. 5.

Ford increased incentives on 1988 four-wheel-drive Bronco II models to $800, up from $600, and on 1988 two-wheel-drive Bronco II models to $600, up from $400. It also raised the rebate on all 1988 Rangers to $800, an increase from $500. The higher truck rebates run Nov. 9-24.

Ford also is offering regional incentives on selected 1989 vehicles. Consumers in California receive $800 on 1989 Taurus/Sable and 1988 Sable and $600 on 1988 Taurus.

The California rebates run Nov. 9-Jan. 5. A buyer cannot receive both the California payment and the national consumer rebate on Taurus/Sable. That national program offers $500 on 1989 Taurus and Sable, $500 on 1988 Sable and $300 on 1988 Taurus.

Ford also announced that the $3,000 consumer incentive on Merkur XR4Ti will be extended from Nov. 30 to Jan. 5. No dealer financial participation is required.

OLDSMOBILE: Oldsmobile is offering regional incentives on its Cutlass Supreme.

In the division's Central region, purchasers of a 1988 or 1989 Cutlass Supreme from Nov. 9 to Dec. 10 can receive two free round-trip tickets on Delta Airlines to any city in the continental United States served by the airline. Buyers must use their free Delta tickets before July 31, 1989. Some restrictions apply. The tickets are transferrable to friends and family members but reservations must be made through Oldsmobile program headquarters.

The Central region includes all of parts of Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, Indiana, Kentucky, Ohio, Virginia, West Virginia, Michigan, New York and Pennsylvania.

In the division's Eastern region, purchasers of a 1988 or 1989 Cutlass Supreme between Nov. 9 and Nov. 30 receive a year's supply of gasoline (up to $652) at Exxon stations. Buyers receive an Exxon credit card with $652 worth of credit after purchasing a Cutlass Supreme at dealership in the region. Oldsmobile said the EPA Buyers Guide cites $652 as the average yearly cost of gasoline for the Cutlass Supreme.

The Eastern region includes all or parts of Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Vermont, North Carolina, South Carolina, Virginia, Delaware, New Jersey, Pennsylvania, District of Columbia, Maryland and West Virginia.

Both regional incentive programs can be used in addition to any other rebate on the Cutlass Supreme. The national consumer rebate program on the Cutlass Supreme offers $1,000 on any 1988 model and $500 on any 1989 model.

In each of the regional programs, Oldsmobile dealers are being asked to participate in the advertising cost through their marketing groups. Dealers who are not members of marketing groups are asked to pay a portion of the ad costs in their areas.

Oldsmobile, like Buick, is also recontacting 317,000 Thunderbird and Cougar owners with new incentives through a direct-mail campaign. Consumers who accepted Oldsmobile's September offer of $100 for test drive of a 1988 or 1989 Cutlass Supreme are being offered a $750 rebate or 7.5 percent GMAC financing for up to 48 months to purchase a 1988 or 1989 Cutlass Supreme. The offer runs from Nov. 1 to Nov. 30.

Those who did not take advantage of the September offer on the Cutlass Supreme are being recontacted and will be offered $50 to test drive a 1988 or 1989 model. They will also be offered the $750 rebate or 7.5 percent financing upon purchasing a 1988 or 1989 Cutlass Supreme. There is no dealer financial participation required.

The offer can be used in conjunction with other rebates on the 1988 or 1989 Cutlass Supreme.

PONTIAC: Pontiac is offering $1,000 rebates on 1989 Grand Prix to 410,000 Thunderbird and Cougar owners through a direct-mail program. The program began Oct. 1 and ends Nov. 30.

Coupon recipients can also receive an office-supplies holder when they test drive a 1989 Grand Prix. There is no dealer financial participation charge. Consumers must order the car between Oct. 1 and Nov. 30.

New-car inventory jumps to 65 days

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Healthy new-car deliveries in October failed to reduce inventories below the month-earlier level, although stocks were lower than last year's Nov. 1 total.

Inventories of U.S.-built cars were the lowest for any Nov. 1 since 1985.

Import-car stocks, however, were the highest for any Nov. 1 in recent history. The import average days' supply almost matched the domestic figure.

November opened with a combined inventory of 2,090,681 U.S.-built and imported cars, representing a 65-day supply. A month earlier there were 6.22 percent fewer cars in stock or a total of 1,968,288 unsold cars. That was equal to a 60-day supply.

Last year, on Nov. 1, there were 2,124,674 domestic and imported cars on hand, equal to a 72-day supply. Last year' car stocks were only 1.60 percent higher than the current total, but the days' supply was higher because last October's sales pace was slower.

In spite of a 12.59 percent sales gain in October 1988, stocks of U.S.-built cars on Nov. 1 were 7.34 percent higher than last month. There were 1,487,638 unsold domestic cars on Nov. 1, equal to a 66-day supply.

A month earlier, the domestic-car stockpile was 1,385,938 units, representing a 60-day supply. A year ago, on Nov. 1, there were 1,558,931 domestic cars in stock, equal to an 80-day supply.

Import-car stocks were elevated on Nov. 1 because October import deliveries fell 11.39 percent below last year's.

On Nov. 1, there were 603,043 unsold imported cars, equal to a 65-day supply. That was up from last month's 11-month low import inventory of 582,350 units, equal to a 59-day supply. A year ago, Nov. 1 import-car stocks totaled 565,743, a 56-day supply.

Several dealers confirmed that domestic inventory numbers were lower and import stocks were more bloated on Nov. 1.

"Import inventories are higher — in the neighborhood of a 150-day supply. Domestic inventories are low. We have about 30 days' worth," said Steve Siomkin, general sales manager for Auburn (Calif.) Nissan-Chrysler-Plymouth-Dodge.

There's an inventory imbalance, agreed Dave Clarke, vice president of sales at Wagner Ford-Nissan-Peugeot, Simsbury, Conn. He said Nissan stocks were at 70 days and Ford Thunderbird and Bronco II changeovers left a 30-day supply for those models.

On Nov. 1, combined car stock shares of the Big 3 automakers (including their captives) and three major Japanese transplants were rearranged slightly.

General Motors' combined share was down 1.78 percentage points from last November. Ford Motor Co.'s stocks were up over 3 points and Chrysler Motors' share was down nearly 3 points. Nissan's share was also down a point.

The combined car inventory shares on Nov. 1 this year were as follows: GM, 41.82 percent; Ford Motor Co., 22.08 percent; Chrysler Motors, 12.66 percent; Nissan, 5.58 percent; Toyota, 2.20 percent; and Honda, 1.66 percent. The other imports had 13.99 percent.

All six domestic carmakers began November with more unsold cars. Ford and Honda sold enough cars in October to maintain the same average days' supplies they had Oct. 1. Chrysler reduced its days-supply number.

GM's domestic stocks grew 9.04 percent to equal a 76-day supply on Nov. 1, up from a 67-day supply a month earlier. However, that was below last Nov. 1, when it had a 90-day supply.

Although Ford's domestic car inventories were up 5.12 percent from Oct. 1, it maintained an average 62-day supply. Last November, Ford had a 72-day supply.

Chryslers' domestic-car stocks edged up 2.58 percent from the previous month. Because of October sales gains, Chrysler's stocks were equal to a 63-day supply of cars vs. a 64-day supply last month. Last year, Chrysler's stocks represented a 112-day supply.

All four transplants reported more unsold U.S.-built cars on Nov. 1 than a year ago. Nissan's U.S.-built car stocks equaled a 73-day supply compared with a 40-day supply last Nov. 1.

Transplant Honda reported the slimmest domestic-car stocks. It had 16 days' worth of unsold domestic cars.

The import car and truck stockpile grew to a 66-day supply, or 746,664 vehicles on Nov. 1. Last month began with 58-days' worth of unsold imported vehicles or 723,482 units. A year ago, the Nov. 1 import vehicle inventory was 743,244 units, a 58-day supply.

Import-truck stocks, considered separately, rose to 143,621, representing a sluggish 70-day-supply this year.

Judge refers Mack-union row to NLRB

WINNSBORO, S.C. — Mack Trucks and the UAW are continuing to fight over the union's efforts to organize 900 workers at Mack's plant here and over charges of union busting and sabotage at the plant.

On Nov. 4, U.S. District Judge Edward N. Cahn filed a decision in Philadelphia that referred the issue of union representation at Winnsboro to the National Labor Relations Board.

Cahn ruled, "Representation issues are within the primary, if not exclusive, jurisdiction of the (NLRB) board."

Attorneys for both sides predicted that the NLRB procedure would take several years.

Cahn said, however, that if the NLRB delays its decision "beyond a reasonable length of time," he will decide the UAW's claim.

Separately, a Mack official at Winnsboro testified at an NLRB hearing that equipment and trucks had been routinely sabotaged at the plant.

The hearing is being conducted to determine if Mack Trucks violated fair labor laws and was engaged in "union busting" when it fired 14 employees from the plant.

Lanny Aselton, the plant's manager of human resources, testified that trucks have been found with their brake lines cut and the rooms where trucks are painted have been vandalized.

In a recent incident, a chain was jammed into the conveyer belt that moves trucks along the plant's assembly line, he said.

UAW officials who are trying to organize Winnsboro claim the employees were fired for their union activities. Mack contends it fired them because they broke company rules or had discipline problems.

Light trucks notch record for October

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic light-truck sales started the 1989 model year off with a 4.47 percent increase and a new October record, maintaining their steady, year-long string of records.

A significant, though perhaps short-lived, phenomenon last month was that Chevrolet ran just about neck-and-neck with Ford. Only 581 sales separated the two light-truck manufacturers, whereas Ford had more than a 19,000-unit lead in October last year.

Part of the closeness may have been due to greater inventory shortages at Ford, which allowed Chevrolet to close in so sharply on its major competitor. But in a general sense, Chevrolet has been narrowing the gap for most of the year.

There was a reprise of another familiar story as foreign-based light-truck manufacturers continued to slip in October.

Their sales dropped 25.45 percent from the year-earlier month, and their market share continued to plummet as well. The foreign-based segment captured 12.68 percent of October light-truck sales, a loss of more than 5 percentage points from their 17.76 percent share a year ago.

For 10 months of the calendar year, they have maintained a 14.62 percent share of U.S. light-truck sales, down from 19.04 percent last year.

October saw sharp gains by almost all manufacturers except Plymouth and Dodge, which just barely edged ahead of their year-earlier numbers.

Overall, light-truck manufacturers retailed 387,500 trucks in October compared to 370,904 in 1987.

Automotive News' tally excludes the Class 4 medium Super Duty truck model, which Ford has been reporting as part of its light-truck sales total, but which really doesn't belong in that category.

For 10 months, industry sales of 4,098,500 light trucks were up 4.38 percent from 3,926,644 in like 1987.

Jeep, as it has throughout the year, led the industry's sales gains. Its October sales of 22,435 units were up 29.70 percent from a year earlier.

Behind Jeep, Chevrolet and GMC turned in almost equally impressive sales gains, totaling 22.33 percent and 20.96 percent, respectively.

Chevrolet's sales of 114,866 light trucks in October were up from 93,898 a year ago. GMC's 28,727 sales were up from 23,749 in 1987.

Industry leader Ford, which has been producing at maximum capacity, recorded 115,447 sales last month, excluding its medium-duty Class 4 models, up 1.62 percent from 113,601 a year earlier.

Among the imports, only Isuzu showed a gain in October, on sales of 8,311 trucks that were up 17.80 percent from a year earlier.

Nissan had one of the biggest declines with sales of 11,332, off 36.98 percent from last year. The Nissan totals include U.S.-built and imported trucks.

Import leader Toyota also had a fairly sizable decline with sales of 18,160, off 18.24 percent from 1987.

For 10 months, Ford's sales of 1,224,223 light trucks were up 4.47 percent from last year; Chevrolet's sales of 1,120,287 were up 13.29 percent; Chrysler's sales of 648,088 were up 9.04 percent; GMC's sales of 297,438 were up 15.92 percent; and Jeep's sales of 209,114 were up 24.98 percent.

Among foreign-based manufacturers, only Range Rover maintained a lead over last year for the first 10 months, although its sales, too, were off in October.

Kelpie buys Mexico plant to make novel pickup for U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TORRANCE, Calif. — Australian-based Kelpie Industries purchased a 360,000-square-foot auto plant in Monterrey, Mexico, as part of its plan to enter the U.S. light-duty utility-vehicle market in the 1990 model year.

Kelpie is tooling up to begin Mexican production in the third quarter of 1989 on a restyled, plastic-bodied version of the "kneeling" pickup first shown in prototype form last fall, said Bob Honan, president and chief executive officer of Kelpie Industries U.S.A.

The Kelpie Kargo still will be based on Chrysler running gear and other components of the Dodge Dakota pickup, but it has new stepside styling and mostly sheet molded compound body panels that will give it a distinct Kelpie look, Honan said.

The heart of the exercise is still a drop-bed and tailgate design that eliminates the rear axle and allows the entire truck bed to be lowered to ground level for easier loading and unloading.

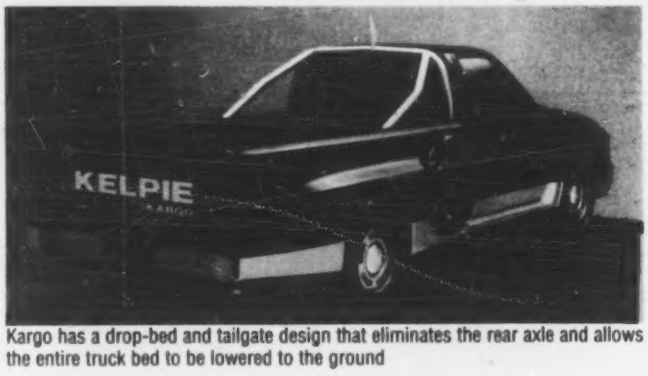
That was the idea that originally made Kelpie Industries Ltd. of Matraville, New South Wales, a successful Australian stock offering.

It also fueled the interest of Socofi SA, a Swiss banking house, which recently acquired 49 percent of Kelpie Industries' stock in exchange for $40 million in new capital. That is paying for the Monterrey plant, design revisions and tooling and preliminary engineering work on a variety of other projects, including drop-bed trailers and walk-in vans.

Kelpie is planning to produce 20,000 Kelpie Kargo pickups for the U.S. market in its first 12 months. The plant has a single-shift capacity of 30,000 units annually, but could manufacture up to 80,000 annually on a two-shift basis if demand is great enough, Honan said.

So far, 52 dealers have signed franchise agreements or set up lines of credit, Honan said. Kelpie is seeking an eventual network of 250 U.S. dealers, he said.

Because the 2.5-liter four-cylinder engine, front-drive transmission and other components are Chrysler-produced, most Kelpie franchisees will be Dodge or Chrysler dealers. "It's running about 90 percent Chrysler-affiliated so far," Honan said.



Kargo has a drop-bed and tailgate design that eliminates the rear axle and allows the entire truck bed to be lowered to the ground

To drum up dealer interest in the Sun Belt and to test consumer reaction to the vehicle, Kelpie conducted a three-week, 28-city tour from California to Florida to display the original prototype and a scale model of the revised design.

Kelpie's marketing plans are to concentrate initially on commercial customers. Chairman Robert Page originally developed the Kelpie for use in his shopping-cart-retrieval business after he got tired of lifting carts into a pickup.

Kelpie executives believe commercial truck users, who think of vehicles as tools, will be the easiest sell for a pickup that retails for $15,000-$17,800, depending on options.

"But our market research shows that there could be a significant demand for the Kelpie Kargo as a personal-use vehicle," Honan said. The 11-inch ground clearance and the ability of the truck to drop to ground level so motorcycles and all-terrain vehicles can be rolled into the bed would be appealing to outdoors types, he said.

Current specifications for the Kelpie Kargo call for a 124-inch wheelbase, 211 inches in overall length and 80 inches in width.

The cargo box is 96 inches long, 51 inches wide and 32 inches deep with 90 cubic feet of capacity and a payload of 1,800 pounds. The GVW rating is 5,200 pounds.

The powertrain, a 2.5-liter four-cylinder engine and three-speed automatic front-drive transaxle, is from Chrysler's minivan.

Because the rear axle is eliminated to allow the bed to drop to the ground, the Kelpie Kargo must have a rigid bar across the back to keep the rear wheels from warping when the bed is lowered or raised. The box is locked into place to provide structural rigidity when the vehicle is moving.

The original design was a roll-bar-like arrangement above the rear wheels. The latest design moves that forward to just behind the cab, with bars running diagonally from the corners of the roll bar through the sides of the bed to anchor at the top of the rear-wheel suspension.

Kelpie has contracted for necessary U.S. government certification testing, which will be conducted starting in February at the Transportation Research Center near Marysville, Ohio, said Bud Koch, Kelpie vice president — research and product development.

Calif. bans 'free' offers by dealers

LOS ANGELES — A new law will prohibit California new-car dealers from advertising free merchandise, gifts or services contingent on the purchase of a vehicle. The law goes into effect Jan. 1.

The law also says that the term "free" will include merchandise or services offered for sale at a price less than the seller's cost.

For example, according to an analysis by the Motor Car Dealers Association of Southern California, it will be unlawful for a dealer to advertise that a customer will receive a free television or mink coat with the purchase of a vehicle or that the customer may purchase such items for $1 with the purchase of a vehicle.

However, that section does not prohibit a dealer from advertising free merchandise, such as factory-sponsored "free options," that are provided by a source other than the dealer.

Other highlights of the law prohibit a dealer from:

- Using the term "rebate" or similar words such as "cash back" in advertising unless the rebate is expressed in a specific dollar amount and is in fact a rebate offered by the maker or distributor.
- Advertising a guaranteed trade-in allowance unless the guarantee is provided by the maker or distributor.
- Advertising a vehicle at a specified amount above, below or at the maker's or distributor's invoice price to the dealer, unless the advertisement states, "The invoice amount may exceed the actual dealer cost because of allowances provided by the manufacturer or distributor."
- Advertising any underselling claim, such as "we have the lowest prices," unless the dealer has conducted a recent survey showing that the dealer sells vehicles at lower prices than any other dealer in its trade area and maintains records to back the claim.
- Advertising any incentive offered by the maker or distributor if the dealer is required to contribute to the cost as a condition of participating, unless the dealer discloses that "Dealer participation may affect consumer cost."

John B.T. Campbell III, president of Campbell Automotive Group Inc., a chain of eight dealerships in Orange County, Calif., said he was in favor of the law.

"There has been, is and continues to be a certain amount of deceptive and misleading advertising done by automobile dealers in California," Campbell said. "I am in favor of this law because it affects those who are doing the misleading advertising and, if they continue, there will be a penalty.

"Customers are smart enough to know that if you buy a car and get a free television, it is not really free," he said. "It is built into the cost of the car someway."

Mike Miller, who owns Toyota and Chevrolet dealerships in Culver City, Calif., said "I think it is about time. We don't advertise that way. It is wrong, and I agree with cleaning it up."

Bud Barish of Barish Chrysler Plymouth, Los Angeles, also endorsed the law. "I get upset whenever I see something that says it's free and you know it is included in the price of the car," he said. "It's a gimmick and the fewer gimmicks we have in the automobile business, the better."

INCREASE YOUR PROFITS WITH NU*STAR

European car sales strong; VW closes in on Fiat for lead

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Despite predictions of a decline in 1988, European new-car sales rose 5.3 percent during the first three quarters and remain on target for another record year.

Meanwhile, Volkswagen A.G. is narrowing the gap between itself and sales leader Fiat, according to industry estimates compiled by Automotive News.

In line with the nine-month trend, September sales in 17 Western European countries rose 5.2 percent to 988,200. Nine-month sales totaled 9,999,100 cars, which was ahead of the 1987 pace that resulted in a record 12.4 million sales for the year. Automakers and industry analysts generally had forecast a drop of about 5 percent this year, but most major markets have remained buoyant.

Fiat, including Lancia and Alfa Romeo, led the European rankings through the first nine months. But VW, with Audi and Seat, appears on the verge of regaining first place and finishing No. 1 in Europe for the fourth straight year.

Fiat sales totaled 1,466,200 through September, a 6.7 percent increase over 1987. Alfa Romeo, which came under Fiat ownership last year, was up 14.3 percent for the year to 166,000 units and has boosted its share of the European market from 1.5 to 1.7 percent with introduction of its new 164 sedan.

The combined Fiat group share was 14.7 percent, while VW, which outsold Fiat by more than 20,000 units in September, held 14.5 percent on nine-month sales of 1,454,500 cars. VW sales were up 3 percent over 1987.

Peugeot S.A., including the Peugeot and Citroen brands, had a firm grip on third place through the first three quarters. The French group posted sales of 1,263,000, an increase of 14.1 percent and a 12.6 percent share. Most of the gain is attributable to the Automobiles Peugeot Division, which boosted sales 18 percent to 792,800 units. From a percentage standpoint, that was tops among volume makers in Europe and was second only to BMW overall.

Fourth-place Ford was hurt by a strike in the United Kingdom earlier this year while capacity was already limited. Ford held 11.6 percent of the market through September on sales of 1,161,400, an increase of just under one percent.

General Motors has been picking up steam in recent months as supplies of the Corsa small car improve with the addition of a third shift at its Zaragoza, Spain, plant. Fifth-place GM was up 4.3 percent for the year to 1,065,400 units, a 10.7 percent market share.

In September alone, GM sales improved 11.3 percent, an increase second only to Peugeot's 11.9 percent gain among the six volume manufacturers.

Renault sold 992,200 cars through September, an improvement of 1.8 percent and good for 9.9 percent of the market.

Helped by strong sales in Britain, Austin Rover moved past Mercedes-Benz into the No. 7 position in Europe. Rover sales improved 9.9 percent to 367,300 units and a nine-month share of 3.7 percent share. Mercedes held 3.5 percent with sales of 345,000, a gain of 1.8 percent for the year.

BMW has made a strong gain in 1988 with the introduction of its new 5 series. Sales for the German maker totaled 275,900 during the first nine months, a pickup of 23.4 percent. BMW sales jumped 86.4 percent to 33,100 units in September, registering big gains in all major markets.

Japanese manufacturers, who raised ire in Europe during 1986 and 1987 by increasing their market share, have kept pace with the overall market in 1988. Combined sales increased 4.7 percent to 1,136,000 through September and the Japanese share of 11.4 percent was unchanged over 12 months.

Nissan remained tops among the Japanese in Europe with nine-month sales of 301,200, an increase of 6.3 percent and a 3 percent share.

West Germany is Europe's largest market, but remains 2.1 percent behind last year's record pace, which resulted in 2.9 million sales for the full year. Sales totaled 2,138,900 through the first three quarters. In September, West German sales increased 1.8 percent.

All of Europe's other major national markets will apparently set records this year. The United Kingdom, Italy and France should all exceed 2 million units, and Spain will almost certainly go over one million for the first time.

The United Kingdom rose 7.7 percent in September and 11.6 percent for the first nine months to 1,826,800. Italian sales totaled 1,661,000 through September, a 7.4 percent jump over the same period last year. September sales rose 4 percent in Italy.

New-car sales in France improved 6.6 percent for the year to 1,564,000 and rose 13.2 percent in September alone. The Spanish market is still booming, with sales up 31.5 percent in September and ahead 17.5 percent to 804,100 for nine months.

Strikes settled; Korean makers face big backlog of home orders

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Korean companies are faced with a huge backlog of orders in the home market as a result of strikes earlier this summer.

Hyundai Motor Co., Kia Motors Corp. and Daewoo Motor Co. have orders for nearly 90,000 vehicles, the equivalent of two full months of domestic sales.

Growth in the domestic demand for new vehicles has been outstripping supply, a situation made worse by the industry's insistence upon meeting export commitments first.

Production was restricted in September and October because of several major holidays. Furthermore, plants had to slow production of some models because of a shortage of auto glass that resulted from a strike at Hankook Safety Glass. That strike has been settled.

The order backlog will begin to shrink this month, analysts say, and domestic supply could return to normal by early 1989.

Kia Motors' backlog includes 4,200 passenger cars and 24,400 commercial vehicles. Daewoo Motor has orders for 8,600 cars, 2,000 trucks and 1,400 buses. It can turn out about 15,000 cars, 300 trucks and 500 buses per month.

As of mid-October, Hyundai Motor had a backlog of 30,700 passenger cars and 17,000 commercial vehicles. It will take months to fill some orders since the company can produce only 450 trucks, 500 buses and 330 special vehicles a month.

Meanwhile, about 45,500 vehicles were registered in Korea during September, about 2,000 fewer than in July and August.

Sales in the domestic market totaled 360,000 vehicles in the first nine months of this year, an increase of 24.1 percent over the same period last year.

Car output climbs 5% to 165,790

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 165,790 cars last week, 5.36 percent more than the previous week's 157,360 and 7.85 percent more than the year-ago week's 153,721.

So far this year, 6,185,021 cars have been assembled, 1.43 percent below the 6,274,893 completed last year at this point.

Last week's targeted output was split this way: General Motors, 52.80 percent; Ford Motor Co., 23.14 percent; Chrysler Motors, 14.48 percent; Honda of America Manufacturing Inc., 4.52 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.92 percent; Nissan Motor Manufacturing Co. U.S.A., 1.24 percent; and New United Motor Manufacturing Inc., 0.90 percent.

Truck output was estimated at 89,524 units last week, 1.91 percent more than the prior week's 87,848 and 4.44 percent more than the year-ago week's 85,722.

Year-to-date, 3,610,849 trucks have been built, 7.34 percent above last year's 3,363,849.

GM said it will increase its capacity to build Cadillac Fleetwood models at its Orion Township, Mich., assembly plant in January.

Fleetwood coupe and sedan production will be increased from 40 cars per day to 100 cars per day due to an increase in market demand. However, GM may cut output of the DeVille by as much as 60 cars per day, a spokesman said.

GM slated overtime last Saturday at 10 plants: Janesville, Wis.; Lansing, Mich.; Lordstown, Ohio; Van Nuys, Calif.; Oklahoma City; Wilmington, Del.; Tarrytown, N.Y.; Baltimore; Fort Wayne, Ind.; and Shreveport, La.

Ford scheduled Saturday overtime at its Norfolk, Va., and Lorain, Ohio, plants.

All Ford car and truck plants are slated for daily overtime this week.

GM plant down; Canada slips

Targeted production of cars in Canada last week dipped from the prior week's build as General Motors halted output at one of its plants for model changeover.

Scheduled production of 17,527 cars fell 16.02 percent from the previous week's 20,870 and also dropped 23.55 percent from the year-ago week's 22,925.

So far this year, 921,627 cars have been assembled, 35.12 percent more than the 682,070 completed last year at this point.

Truckmakers estimated production at 20,041 units last week, 4.80 percent below the prior week's 21,051 but 15.66 percent more than the year-ago week's 17,327.

Year-to-date, 808,792 trucks have been built, 13.09 percent more than the 715,147 assembled last year at this time.

GM halted Regal output at its Oshawa (No. 2), Ontario, plant last week to prepare for production of the Chevrolet Lumina, which is scheduled to be introduced in the spring. The plant will build both Regal and Lumina when it returns to work Jan. 3.

Squeezing turnips at Ford

Production strategy getting put to test

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

One of the most pressing questions facing Ford Motor Co. — whether to build a new assembly plant — is taking on new urgency as Ford winds up another successful year.

Continued demand for Ford cars and trucks has put the company's production strategy to a test. With the addition of a second shift at its Michigan Truck plant this month, Ford has moved a step closer to filling up its existing plants.

As it weighs its decision, Ford is confronted with a host of questions regarding quality, worker well-being and other issues that have helped define the company.

Arguing against a new plant is the specter of laid-off workers and idle facilities in the next downturn. Such a scenario would also challenge Ford's cherished status as the Big 3's low-cost producer.

Yet its current course hasn't silenced dealers' cries for more product. Ford is building nearly 20 percent of its vehicles on overtime, a practice that is straining workers and, in the view of some analysts, jeopardizing strides in quality.

The demand for more product is most acute on the truck side. Ford officials admit that shortages probably have cost the company market share. Some constraints have begun to ease as supplies of automatic transmissions and other components have increased.

As it struggles with demand from its own dealers, Ford will have to identify additional assembly space as it prepares to build

Chrysler prepares for '90s

Iacocca outlines product piorities, global plans

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — To position itself for the 1990s, Chairman Lee Iacocca said Chrysler Corp. has established its three top product priorities for the early 1990s, that it will attempt to become a global player, and is likely to invest in non-automotive acquisitions, especially defense.

Iacocca said in an interview that he would like to see a doubling in size of the company's component-making Acustar subsidiary.

Iacocca also said he is hopeful Chrysler's relationship with Fiat will expand beyond the marketing of Alfa Romeo vehicles in the United States and that ventures with Renault are likely to include production of Jeeps because of demand in Europe.

Renault and Chrysler have been studying a plan to build a new four-wheel-drive sport-utility vehicle smaller than current Jeeps, according to company sources in Europe and the United States. Still to be settled is whether the vehicle would be built in Renault's Portugal factory, in another Renault facility or by another joint-venture partner.

In addition, Iacocca said Chrysler is readying a move into South America, probably with joint ventures assembling Jeep kits.

Iacocca also said Chrysler is considering a third minivan source and is studying the possibility of adding "brick and mortar" to the St. Louis No. 2 assembly plant, which produces 160,000 minivans annually.

He also said Chrysler is considering adding a second plant for Jeep Cherokee and mentioned the former American Motors plant in Bramalea, Ontario, which is now underutilized with Eagle Premier production. Cherokees are currently built in Toledo, Ohio.

"When we bought American Motors, they were concerned about staying in business, so they weren't thinking about a second Cherokee plant. We are Bramalea, for example," Iacocca said.

He also said Chrysler at one time tried to purchase from Renault only Jeep, not the entire AMC.

"We once asked them, would they sell us Jeep alone, and they said no," Iacocca said. "Then they said, maybe Jeep and Mack truck combined. Mack they own also. We played around with that."

Chrysler ended up purchasing AMC in August 1987.

Iacocca said that General Motors appears to be regaining its former strength.

14% hike set in car build for early '89

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers will begin the new year with a hefty first-quarter production schedule of 1.94 million cars — 14 percent more than they built during the first quarter of 1988.

Their first-quarter optimism accompanies an increase by Ford Motor Co. and, to a lesser degree, by Chrysler Motors in their production schedules for the remainder of this quarter. Even General Motors, which typically dramatically scales back its rosy production schedules as each quarter progresses, cut its fourth-quarter production plan only 2 percent from its late-September projection.

The industry's fourth-quarter schedule now stands at 1.91 million cars — 9 percent more than all domestic cars produced in the last quarter of 1987.

The nine U.S. automakers now expect to build 7 [illegible] million cars this calendar year — virtually the same number as last year.

Most bullish about the first quarter of 1989 is GM, which has scheduled 21 percent more cars than it built in the 1988 quarter.

FIRST QUARTER AUTO PRODUCTION
1989 forecast vs. 1988 actual

	1989	1988	% change
GM........	931,000	771,829	+20.62
Ford......	474,000	479,268	− 1.10
Chrysler .	272,000	261,436	+ 4.04
Honda....	99,400	92,156	+ 7.86
NUMMI ..	45,000	41,738	+ 7.82
Nissan ...	30,000	20,334	+47.54
Mazda....	61,500	16,362	—
VW........	0	17,284	—
Toyota ...	22,000	0	—
Diamond-Star ...	10,000	0	—
Industry .	1,944,900	1,700,404	+14.38

Its current schedule for the fourth quarter will leave it with at least a 90-day supply on Jan. 1, predicted auto analyst Mike Luckey of Luckey Consulting Group Inc., Cresskill, N.J. That means it will have to cut its current first-quarter forecast, offer major incentives or do both, he predicted.

Thomas O'Grady, Integrated Automotive Resources, said GM's first-quarter production forecast indicates the company "appears to be on the verge of a market-share attack."

O'Grady said he expects GM to cut back a bit from this early schedule but that GM will continue an ag-

SPAIN: *Car sales double since '85 in 'California of Europe'*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

In the last three years, the new-car market in Spain has grown at a rate unprecedented in the global auto industry since Word War II.

Modern plants, a successful export program and a car-hungry population have fueled the boom.

Since 1985 Europe's fifth largest car market has nearly doubled from just over 500,000 units to about a million expected in 1988.

Most European observers expect the market to grow another half-million by 1995, an increase of a million or 200 percent in 10 years.

But some think the real surge in Spain will come in 1992 when Spain's new Common Market status spawns wide-open competition in a long-insulated market. Some analysts think the market will settle in at 2 million units annually.

To prepare, importers today are eating Spain's high tariffs in an effort to build market share and dealer networks.

Japanese makers, all but barred from the country by tight import restrictions, are considering manufacturing bases in low-cost Spain, and Spanish carmakers are gearing up to become major exporters.

And there are still other visions of Spain's role in the European auto industry.

Leaders see '89 sales dip, but no panic

AUTOMOTIVE NEWS ROUNDUP

New-car and -truck sales in the United States in calendar year 1989 will decline from 300,000 to 900,000 units, based on forecasts by officials of U.S. auto companies, the National Automobile Dealers Association and the UAW.

Forecasts for next year range from 14.9 million to 15.3 million units. Calendar-year 1988 sales are expected to come in at 15.6 million to 15.8 million units.

The officials, who delivered their forecasts in exclusive interviews in

Trade pact hinges on Canadian voters

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automakers are keeping a close eye on today's parliamentary election in Canada. Canadian voters will decide whether to approve a sweeping Free Trade Agreement with the United States, or tear it up.

Also watching the vote closely will be Michigan Gov. James Blanchard and the UAW, following last week's rejection by the U.S. Trade Representative of Blanchard's trade case over Canada's duty-remission program.

The issue has dominated the debate between the Progressive Conservative government of Brian Mulroney and the Liberal and New Democratic opposition. It was approved by the U.S. Senate earlier this year.

Mulroney calls the pact a tremendous economic opportunity to expand U.S.-Canadian trade and the Canadian economy, while his detractors have accused the prime minister of signing away Canadian sovereignty. U.S. automakers see the Free Trade Agreement as an important resolution to a major trade complaint against the Canadian government.

Because U.S. negotiators were able to win Canadian concessions in the Auto Pact governing motor vehicle trade — the phased elimination of tariffs on auto parts and an agreement to limit transplant participation in duty-free trade between the two countries for 10 years — the Big 3 decided to drop their demands that Canada end a duty remission program of benefit to foreign-based automakers investing in Canada.

The program allows Canadian transplants to earn tariff rebates in exchange for using Canadian-value-added content and for exporting Canadian production.

The program, which is viewed as an illegal government subsidy by the U.S. industry, was challenged by Michigan's Blanchard. The complaint was thrown out last Wednesday, according to James Callow, a legislative aide in Blanchard's Washington office.

"They gave us two reasons," Callow said. "First, the governor did not have standing and second, they said the Free Trade Agreement took care of the issues addressed in the complaint."

Callow said Blanchard hasn't decided what he will do and that a decision will most likely be made after the Canadian election.

The UAW said it was willing to sign on to the Blanchard complaint if it was rejected on the grounds that the governor did not have standing to bring the action.

However, the union had not done so as of last week.

"As you know, the UAW has never been happy with the FTA," UAW economist Steve Beckman said. "Both sides should realize we have had trade problems with Canada in the past, we have trade problems with Canada now ~~and~~ we will have trade problems with Canada in the future. The FTA is not going to eliminate trade disagreements between our two countries."

If such a trade case is successful, it could result in the imposition of penalty tariffs against Canadian imports to the United States, or quotas on Canadian imports here.

U.S. auto parts producers oppose the Free Trade Agreement because it does not immediately eliminate the duty remission program.

"If the FTA is ripped up as promised, we will have a vastly changed situation," said Steve Collins, director of international affairs for the Motor Vehicle Manufacturers Association. Collins, who advised U.S. negotiators on the automotive sections of the Free Trade Agreement, said Canada's failure to ratify the Free Trade Agreement might cause one of the Big 3 to join the Michigan complaint.

While Collins said that such an outcome was uncertain as of last week, he said U.S. automakers will have to reassess their relationship to Canada if the Free Trade Agreement is scrapped.

"If the Big 3 sign on to the duty-remission complaint, it is going to be very difficult for the U.S. government to ignore," Collins predicted.

Campbell: "Over the next three to four years, you will see three shifts"

Fiero plant may live

Campbell cites bid for Camaro/Firebird

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — General Motors has turned down all proposals from outsiders to resurrect the assembly plant that once produced the Pontiac Fiero, but the plant remains in the running for a future GM product.

David Campbell, vice president of manufacturing at the Chevrolet-Pontiac-Canada Group, said the Fiero plant, in Pontiac, Mich., is among four bidding for production of the next-generation Pontiac Firebird and Chevrolet Camaro. Also in the bidding is GM's plant in Van Nuys, Calif., which now produces those models.

A number of outside companies had presented proposals to acquire or operate the Fiero plant and build a vehicle based on the Fiero's space-frame body.

A decision on where the 1992 Firebird and Camaro will be built will be made in March, Campbell said. Only one plant will be needed.

He said the decision will be based on each plant's record of quality and quality improvement, productivity improvement and its union-management relationship.

The Fiero plant, which was closed in August because of slumping sales, had been held up as a model of union-management relations, and it consistently scored high in GM's internal audits for product quality.

Freight also has become a key factor in product-sourcing decisions because of skyrocketing rail rates, Campbell said. "A plant like the Fiero plant has a tremendous advantage over Van Nuys in freight, because it's located not just in the center of GM activities but also in the center of the supplier base," he said.

Working against the Fiero plant is its capacity. When running flat

Megadealers queried on loan packaging

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TORRANCE, Calif. — Several megadealers may band together to package their own consumer auto loans into investment-grade commercial paper.

First Boston Corp., a New York-based investment bank, pioneered the public sale of $100 million worth of 48-month consumer car loans in 1986, packaging paper issued by major automakers' financial arms much the same way individual home loans are packaged by federal agencies.

Now, First Boston is considering setting up a dealer acceptance corporation with a board of megadealers, Ed Pasini, a partner at Peat Marwick Main & Co., said at a Society of Automotive Analysts meeting.

Most dealers don't carry their own paper but sell it to a third party, often the financial arms of major automakers such as General Motors Acceptance Corp. or Ford Motor Credit Co., which administer loans and collect monthly payments.

"First Boston's experience is that very large amounts of 48-month loans are very predictable and can be sold as AA or AAA paper," Pasini said.

The appeal to dealers is having a guaranteed availability of credit to consumers. Pasini said the possibility of setting up a system is being eyed as a means of avoiding a repeat of 1981-82 when many banks pulled back from auto financing.

He also said there is appeal for multi-brand dealers because it eliminates having to deal with many different financing companies.

However, the dealer-run acceptance company probably would negotiate a fee for automaker financing arms to administer the loans.

Peat Marwick, a public accounting firm, and First Boston surveyed about 25 of the largest multi-point auto dealers with net sales of $250 million or more to see if there was an interest in accounting and financial services for dealers who might be going public. Pasini said the dealer acceptance corporation idea was warmly received.

Giving credence to Pasini's theory was last week's announcement by First Interstate Bank of California that it is phasing out car loans offered through dealers.

A spokesman said the bank will continue to make car loans directly to consumers. But, he said, it is getting out of the business of so-called indirect loans because competition from finance companies associated with the big automakers has made it unprofitable.

Over a period of about two years, First Interstate will close 14 centers throughout the state that offer dealer loans, first consolidating the business at its Pasadena center and eventually phasing out the operation. The bank has a portfolio of $1.6 billion in loans made through dealers.

In recent years, low interest rates offered as sales incentives by such automaker-affiliated companies as GMAC have hurt the profitability of the First Interstate operation, a spokesman for the financial institution said.

GM alters salaried pay plan

Forced ranking discarded for '89

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will retain the performance-based pay structure for its 110,000 U.S. salaried employees, but will scrap the employee-ranking process that went along with it.

F. Alan Smith, GM executive vice president, said establishment of the so-called forced-ranking system that was used to determine salaried pay increases did not foster the spirit of teamwork GM's top executives had hoped to achieve.

"It had the opposite effect we intended," Smith admitted.

Under the 1988 ranking system, 10 percent of the employees within each unit didn't quality for a pay raise. Included were those who already were at the top of their pay range. Another 10 percent were eligible for top pay increases. Another 25 percent were grouped in the next highest category, and 55 percent received a basic pay hike.

Salaried workers, many of whom are organized into teams, complained about the forced ranking, charging that it failed to reward a team of workers for achieving or exceeding a set goal.

In 1989, the forced-ranking structure will be discarded.

Salary ranges for GM's eight pay levels for non-executive employees, based on the comparisons with pay at other companies, will be maintained, Smith said.

Managers will be encouraged to keep most employees toward the middle of the ranges. They also will be required to make sure salary levels within their organization are competitive.

"What we're really doing in changing the system is providing more leeway to the individual unit manager to decide what is appropriate for his business," Smith said. "It may be very different in Kokomo, Ind., making electronic chips than in Rochester, N.Y., making injector valves. Central office will not try to administer it and force everybody to fit into the structure."

Smith said there are no inherent flaws in the system, but that GM tried to institute it in too short a time: "I would say what we did not do very well last spring was to shift gears with our employees. We didn't discuss it long enough, thoroughly enough or well enough."

The two proponents of the 1988 plan, including the forced-ranking system, have left GM. Former Executive Vice President Elmer Johnson, whose responsibilities were assumed by Smith, and Roy Roberts, vice president for personnel, both left GM last summer. Johnson returned to his Chicago law firm; Roberts resigned to take an executive post with Navistar.

GM will announce its 1989 salary pay structure to employees by year-end. It has not said how much money has been set aside this year for pay raises.

In 1988, GM set aside 2.5 percent of its salaried payroll for merit increases plus 3.5 percent for recognition awards. GM does not disclose dollar amounts.

U.S. takes a look at Japan quota's impact on U.S.

WASHINGTON — The U.S. International Trade Commission will investigate the economic impact of Japan's voluntary restraints on auto exports as well as other trade restrictions on the U.S. economy.

The fact-finding investigation is being conducted at the request of the Senate Finance Committee and will focus on the effects restraints have on consumers, the output and profits of U.S. corporations, the income and employment of U.S. workers and the net economic welfare of the United States.

The study will be reported in phases. The first phase will deal with manufactured products and is scheduled to be completed next fall. Two other reports will follow: one on agriculture and natural resources, the other on services.

Car sales in high gear; up 33% for Nov. 1-10

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Early-November domestic-car sales climbed 33.63 percent over last year's weak 10-day period.

Deliveries also surpassed early-October's sales surge of 21.60 percent.

Six of the seven U.S. carmakers reported hefty increases in early November, bolstered by a new batch of incentives ranging from round-trip airline tickets to a year's supply of gasoline. Only Nissan reported lower sales of its U.S.-built cars.

Last year's lackluster Nov. 1-10 sales period reflected the end of cleanup incentives and more cautious spending patterns following the Oct. 19 stock market collapse.

DOMESTIC SALES

	Nov. 1-10, 1988	Nov. 1-10, 1987
Eagle	1,396	450
Chrysler	5,840	7,397
Plymouth	7,457	6,249
Dodge	12,119	7,725
Chrysler Motors	26,812	21,821
Ford	40,136	27,424
Mercury	11,163	9,736
Lincoln	5,977	3,717
Ford Motor Co.	57,275	40,877
Buick	14,695	10,005
Cadillac	6,637	5,822
Chevrolet	33,254	24,725
Oldsmobile	16,010	12,970
Pontiac	17,642	13,842
General Motors	88,238	67,364
Volkswagen	—	641
Honda	10,699	6,425
Nissan	1,475	1,723
Toyota	1,421	656
Mazda	601	68
U.S. Industry Total	186,521	139,575

This year, the domestic industry delivered 186,521 cars, up from 139,575 in 1987. The daily selling rate for the period was 20,725, or 18.79 percent ahead of the 17,447 rate last year at this time. This year's period had nine selling days; there were eight a year ago.

In the first 10 days of this month, Ford Motor Co. sold 40.12 percent more cars than one year ago, and Ford Division sales rose 46.35 percent.

General Motors delivered 30.99 percent more cars than it did a year ago, with each of its car divisions reporting increases. Buick delivered 46.87 percent more cars and Pontiac's sales climbed 27.45 percent over last year's equivalent 10 days.

Chrysler Motors sold 22.87 percent more domestic cars in the period, although Chrysler Division car sales dropped 21.05 percent compared to a year ago.

Honda's transplant sales surged 66.52 percent in the 10-day period, and Toyota's transplant sales more than doubled. Mazda, which began reporting sales of U.S.-built cars late last year, sold 601 cars in the first 10 days of November, compared with 68 a year ago.

Only Nissan reported a decline. Its U.S.-built car sales were off 14.39 percent from a year ago.

U.S.-built light-truck sales totaled 109,229 in early November, up 22.61 percent from 89,090 last year. All four producers advanced. GM reported the biggest sales gain, 38.64 percent, while Ford had the smallest gain: 10.02 percent. Chrysler delivered 16.61 percent more trucks and Nissan's transplant truck deliveries rose 23.27 percent.

Sales of U.S.-built cars and light trucks for the first 10 days of November were 295,750, up 29.34 percent from last year's 228,665.

General Motors sold a third more cars and light trucks in the first 10 days of November this year. GM dealers reported their best model-year start in four years, according to C.N. "Bud" Moore, vice president — customer sales and service staff. He said light-truck deliveries broke a record set 10 years ago.

Ford Motor Co.'s combined car and truck deliveries were up 26.64 percent. Chrysler Motors' car and light-truck sales rose 19.83 percent. The combined car and light-truck sales from Nissan's Smyrna, Tenn., operation gave the Japanese transplant a 3.68 percent edge over the equivalent year-ago period.

minicomputers
ort your growth?

Puny minicomputers.

They're getting pretty useless to growing dealers who need more from a system. The truth is, unless you've got some new "use" for a few awkward chunks of metal, you might as well toss those expensive minis you've outgrown into the dumpster out back.

And replace them with a UCS system.

UCS dealership computer systems never let you down. No matter how much you grow. Because UCS systems run on the powerful IBM® 9370. UCS lets you plug into systems ranging from 30 to 1,200 ports–so you can run anywhere from 20 to a phenomenal 1,000 active terminals simultaneously with quick response time. Even from multiple, remote sites.

And your growth will never bust your memory banks. Because UCS can put up to a remarkable 39,600 megabytes of storage at your command. In a single processor. No costly system conversions. And no cute little minis to add to your stack, as with other vendors.

To put all this power to work for you, UCS brings you the most innovative software available. We listen to and act on your ideas. So we can enhance our current programs and continually develop unique new ones.

IBM
Authorized Industry Remarketer

Always fully integrating every department in every one of your dealerships. UCS backs all this with comprehensive training plus all the personal and technical support you need to fully utilize your system.

Everything we do at UCS reflects our simple promise: the first system you buy is the last system your dealership will ever need. It's the *only* system you'll never outgrow. Even if you never stop growing.

So if you're finished toying with minicomputers that can't support the growth of your dealership, call UCS at 1-800-231-6347. In Texas, call (713) 688-7238.

1988 called year of major gains for specialty equipment

By Wes Raynal
AUTOMOTIVE NEWS STAFF REPORTER

AUTOMOTIVE NEWS/WES RAYNAL

This Trans Am has appearance and performance components like those available in the aftermarket

The specialty equipment market, spurred by consumer demand, is expected to grow more than 14 percent this year and maintain that level in 1989.

That is the prediction of the 1989 Market Study by the Specialty Equipment Market Association.

It said the industry sold $1.7 billion worth of specialty equipment in 1985, $1.9 billion in 1986 and $2.1 billion in 1987. SEMA predicted that 1988 sales will total $2.4 billion.

Auto manufacturers, likewise, expect to see more aftermarket-based equipment appear on production vehicles, further increasing demand.

Richard Amacher, manager of special product development for Chevrolet, said the aftermarket industry is important to automakers. "It's egotistical for us to think we can do it all," he said.

Amacher said the growth of the aftermarket industry will continue because it uses production vehicles as a base. If a consumer likes an item for a Chevrolet better than a similar item for a Ford, it may influence his purchase decision.

He said the automakers will continue to tap that market.

Chevrolet is particularly interested in the specialty equipment industry, he said, because much of the money spent by car enthusiasts is for equipment for Chevy's small-block V-8.

Mark Reynolds, Mopar Performance manager of service and parts operations at Chrysler, said exhaust headers are a good example of an aftermarket product now seen on many production vehicles.

Production models like the Pontiac McLaren Grand Prix Turbo, the Ford Mustang GT, the Chevrolet Beretta GTU and the Toyota Corolla GTS feature performance, appearance or handling products that were offered in early aftermarket body kits.

Low-profile tires, sunroofs, power windows and cruise control — now common in dealership showrooms and repaired in service departments — all started in the aftermarket. Light- and medium-duty trucks also feature performance and off-road equipment that began in the aftermarket.

"The aftermarket can often come to market with a product faster than we can because of shorter leadtimes," Reynolds said.

He also noted that quality can suffer because of those shorter leadtimes.

"We (the auto manufacturers) must make our products last; the aftermarket sometimes does not meet the durability requirements we have," he said.

The SEMA study said performance tires designed to improve vehicle performance, appearance or handling have been the hottest-selling specialty equipment product in 1988. Custom wheels are second, and tire and wheel combinations together account for almost 40 percent of all specialty equipment sold.

Engine parts for both performance and appearance are third in 1988 sales.

Just as manufacturers are adapting aftermarket-based equipment to new cars, SEMA's study shows that vehicles less than two years old are generating a great deal — 16.4 percent — of aftermarket performance purchases.

Vehicles 11 years old or older generate the lion's share — 50.3 percent — of specialty equipment purchases, although less than 10 percent of all vehicles registered in the United States are that old, according to SEMA.

SEMA's study also found that the amount of money spent on specialty equipment for imported vehicles doesn't reflect the number of imports on the road.

The study said that one in five vehicles registered in the United States is an import, while just 12.1 percent of the money spent for specialty equipment is for imports.

The study said that purchase motivation comprises a number of factors. Where the product is made, brand name and price are all important to the consumer.

A "Made in U.S.A" label was found to be important to specialty equipment buyers. SEMA said that 86.3 percent of buyers called that label important or very important in product selection.

SEMA said that U.S.-made products increase in importance as the amount of equipment purchased increases. Consumers who spend the most money on aftermarket equipment are those who believe that it is important to purchase U.S.-made products.

The brand name of a product is a significant purchasing factor, more so among those buying specialty equipment than those buying in the overall aftermarket. SEMA classifies specialty equipment as products that are purchased on a discretionary basis (such as aluminum wheels) while the overall aftermarket consists of parts purchased in order to keep a vehicle operational.

Reynolds said the demographics of the SEMA study fit exactly what Chrysler is trying to accomplish.

"What drives these buyers, things like brand loyalty, buyers shopping not based on price only, is great for us (Chrysler). We want people to buy our products because we made them, because people believe we make quality products, not because we're cheapest," he said.

Specialty equipment customers are getting older and more affluent, according to SEMA. These older buyers, it said, are generally not do-it-yourselfers and want equipment to be installed by technicians.

SEMA asked specialty equipment manufacturers what is needed to increase competitiveness and expand in their market. The manufacturers said their biggest challenges are keeping product quality high and maintaining innovation.

Surveyed manufacturers also were concerned with keeping their prices competitive and improving manufacturing and distribution efficiency.

The SEMA Market Study findings were compiled from an analysis of consumers, retailers, performance warehouses, manufacturers and market trends.

SEMA used mail questionnaires, telephone surveys, personal interviews and background research. Lang Market Resources Inc. conducted the research and wrote the report. A total of 151 manufacturers were surveyed, and 1,000 consumers responded to questionnaires.

Shop volume rises after dip in July

Upturn in August termed 'seasonal'

By Wes Raynal
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume at new-car dealerships was down in July but rebounded in August compared to the year-ago months.

In July, shop volume was down 0.7 percent compared to July 1987, according to the Automotive News Service Index. Shop volume in August was up 11.2 percent compared to August 1987.

Dealers cited seasonal reasons for the August uptick. A dealer in the Northeast was one of many who said his volume was up in August because the unusually hot weather prompted an increase in cooling-system work. A dealer in the Northwest said he serviced more cars for tourists in August.

Gross profit in July was up 0.2 percent compared to July 1987 and up 15.7 percent in August compared to August 1987.

The number of repair orders written was down 8.0 percent in July but was up 2.7 percent in August compared with the 1987 months.

Labor sales (customer paid and warranty) were down 3.0 percent in July and up 8.0 percent in August compared to 1987.

Shop parts used on repair orders were up in both months, 5.0 percent in July and 14.0 in August.

Finally, sales of all parts and accessories were up 2.2 percent in July and 15.8 percent in August compared to the 1987 months.

SERVICE INDEX
99.3*

	July, '88 vs. July, '87	7 mos., '88 vs. 7 mos., '87

Shop Parts Sales (Customer & Warranty)	+14.0%	+7.0%
Sales of All P&A	+15.8%	+8.0%

* Survey by Automotive News shows that dealers' service and parts business in August 1988 was 111.2 percent of business in August 1987. Service business in the first 8 months of 1988 was [illegible] percent of business in the corresponding period in 1987.

GM picks Techline as shop-systems tag

SHOP TALK

WES RAYNAL

General Motors' new service technology group will market its Computerized Automotive Maintenance System and other advanced diagnostic service and service information retrieval systems under the trade name Techline.

Techline equipment will be offered as a series of tools ranging from the Tech 1 hand-held diagnostic tester to the top-of-the-line $20,000 CAMS diagnostic terminal, now labeled Tech 100.

In addition, a basic service information retrieval system, which allows GM service personnel to look up service bulletins electronically, will be marketed to independent repair shops by Sun Electric Corp., Crystal Lake, Ill., under the Expertec name.

Sun will also market related training materials to independent repair shops.

Crane acquires Allison

Crane Cams of Daytona Beach, Fla., manufacturer of aftermarket auto parts, has purchased Allison Automotive of Monrovia, Calif.

Financial details were not disclosed.

Allison Automotive manufactures ignition systems, timing control computers and spark plug wires for use in drag racing, stock car racing and high-performance street models.

At the recent Specialty Equipment Market Association show, Crane introduced its new Engine Management System. Company officials said it can be used to replace the original-equipment engine control computer, allowing higher performance while maintaining legal emissions levels.

Crane also introduced Compu-Cam, a line of computer compatible camshafts designed specifically for cars equipped with engine control computers.

The camshafts provide better performance while allowing the engine to maintain proper manifold vacuum pressure and idle speed, the company said.

Allison entered the market in 1971 when it introduced the XR-700 ignition system, an electronic system for high-performance applications.

Allison's ignition systems include XR-1000, XR-2000 and XR-3000, all for high-performance street applications. Allison also makes the DMS-6000, a system strictly for racing, and the DTC-2000, a driver-adjustable timing-control unit.

IBM and Ford link

IBM has developed a fully automated manufacturing process to assemble instrument clusters at Ford Motor Co.'s Saline, Mich., plant.

It was developed by IBM's systems integration division.

The process is called the Automated Logistics and Production System.

IBM said it can assemble 5,000 instrument clusters a day.

The clusters are assembled at 10 work stations in two assembly modules.

A worker loads the cluster backplates onto carriers that transport them to a stacker. The stacker keeps count of the inventory of backplates while transporting them to the robotic workstations for assembly.

Next, robots insert light bulbs and clips into the backplate; another robot installs fuel, speed and engine temperature gauges; yet another robot attaches the lenses; and a final robot screws the cluster together.

The robots use integrated and tactile sensors that can "see and feel" parts.

The system can be programmed to handle the manufacture and testing of other assemblies as well.

New leak detector

Spectronics Corp., inventor of fluid-leak detectors, has introduced a new leak-detection device called Spectroline ALD-80.

The ALD-80 uses Spectroline's new black light, the BIB 120. Spectronics says that the ALD-80 weighs 2½ pounds and has a self-contained power unit.

Traditional black lights normally use an external transporter for power and are heavier.

The kit retails for $279.

Trucks hit Oct. record

Makers are on road to new yearly high

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

U.S. retail truck sales in October recorded a new monthly high, with all industry weight classifications except one showing gains over last year.

The October performance also kept the industry on track for a new calendar-year high.

Retail truck sales totaling 418,495 in October were up 5.79 percent from 395,563 a year earlier.

For the 10-month period, the industry total of 4,384,816 was up 5.10 percent from 4,172,020 in like 1987.

For the month, Class 1-3 light-duty sales of 388,270 were up 4.49 percent from 371,575 a year ago, according to Automotive News' tabulations based on manufacturers' reports.

Class 4-7 medium-duty sales of 15,802 were up 22.18 percent from 12,933 last year, according to the Motor Vehicle Manufacturers Association.

Class 8 heavy-truck sales of 14,423 were up 19.64 percent from 12,055 a year earlier, MVMA said.

In the medium segment, Class 4, bolstered by Ford's Super Duty models, continued to score the biggest gains. Class 4 sales totaled 2,187 compared with only 142 in the same month a year ago.

Class 5 sales, bolstered by newer Japanese entrants, nearly doubled. They totaled 777 compared with 421 in the like year-earlier period.

Class 6 sales came in at 4,018, up from 3,393 in like 1987.

Class 7 was the only segment recording a decline in October. The segment has been particularly disappointing in view of the new "Baby 8" models introduced within the past year, which, thus far, haven't done much to move the sales needle.

The segment produced 8,820 sales in October, down from 8,977 a year ago.

Class 8 heavy-truck sales surged ahead in October, after being somewhat restricted in the earlier sales period by the Ross steering gear recall. Generally, manufacturers had held up shipments on some new models in order to give priority to replacing defective components in trucks already on the road.

October's Class 8 sales of 14,423 surged 19.64 percent ahead of the 12,055 sales in the year-earlier period.

For the 10-month period, the industry retailed 4,104,960 Class 1-3 light-duty vehicles, a 4.38 percent increase over the 3,932,703 of like 1987.

During the same period, medium-duty sales of 158,014 were up 21.92 percent from 129,609 last year.

Class 8 sales of 121,842 were 11.06 percent higher than the 109,708 a year earlier.

David Healy, an analyst with Drexel Burnham Lambert, estimated Class 8 sales of about 145,000 for this calendar year and a drop to the 140,000-unit level in calendar 1989.

Healy also sees Classes 6-7 in the medium segment coming in at 156,000 this year, declining to 150,000 in calendar 1989.

GM's medium-duty truck for the '90s POPULAR MECHANICS/JIM DUNNE

All-new styling, with a more rounded front end, characterizes General Motors' 1990 medium-duty trucks, which go into production next fall. The Chevrolet Kodiak, shown here, and comparable GMC Top Kick have doors that wrap higher into the roof and more-slanted, aerodynamic windshields. They apparently will also have some plastic body panels. Among the engines offered will be Caterpillar's 3116 diesel, according to GMC.

Truckers seek axle rule change

The National Motor Carrier Advisory Committee has asked the Federal Highway Administration to consider truck manufacturers' recommendations to exclude the steering axle from calculations when applying the Federal Bridge Formula-B to vehicle combinations.

The committee advises the U.S. Department of Transportation on trucking industry issues.

The change would allow better placement of steering axles in short trucks hauling heavy loads, some truckmakers say. The advantages include a shorter wheelbase and improved steer angles, improved operator and service access, smoother ride and increased load-carrying capacity.

Ernst G. Stoeckl, Freightliner president and chief executive officer, said the object of the amendment is to allow operators to benefit from the selection of a steering axle placement that would optimize vehicle performance without changing the current bridge formula and avoid any detrimental affects on roads and bridges.

U.S. truck design and operations have been constrained since 1974 when the Federal Bridge Formula-B was enacted, forcing the steering axle to an extreme forward position to reach the allowed 80,000-pound GVW limit.

The Surface Transportation Assistance Act of 1982 liberalized overall length on federal highways but did not change the Federal Bridge Formula-B guidelines.

Manheim spends $7 million on auction in namesake city

Groundbreaking ceremonies were held recently for the construction of a $7 million facility in Manheim, Pa., for the Manheim Auto Auction.

The facility will house administrative offices, a cafeteria and 12 auction lanes northwest of the existing facility. It also includes an eight-lane drive-through registration area.

Manheim Auto Auction has operated continuously at this 69-acre site since 1948. A total of 28 acres is being improved to accommodate the new operation.

When completed next summer, there will be 45 acres of paved parking within the complex.

Greg Gehman, general manager, said the expansion is long overdue. "We are bursting at the seams under our current situation," he said. "This new facility will serve our expected increases in volume well into the next decade."

AUCTION BRIEFS

CHARLES THOMAS

ServNet elects officers

Alexis Jacobs, owner of Wednesday Auto Auction in Columbus, Ohio, has been elected president of ServNet, a nationwide cooperative advertising network of independent auto auction owners.

Also elected were Larry Tribble, owner of Southern Auto Auction, East Windsor, Conn., vice president; Chet Goins, owner of Auto Dealers Exchange of Indianapolis, vice president; Jeff Barber, owner of State Line Auto Auction in Waverly, N.Y., secretary; and Jake Hershey, owner of Pennsylvania Auto Dealers Exchange in York, Pa., treasurer.

ServNet was formed to provide a national network for independently owned auto auctions. It allows them to compete with auction chains.

Omaha auction debuts

Anglo American Auto Auctions has dedicated its new $8 million facility in Omaha, Neb. It will employ 165 people and have consignments of about 50,000 vehicles annually.

The new Omaha Auto Auction has five lanes, a restaurant, a 40,000-square-foot vehicle reconditioning center and 47 acres of vehicle storage lots. Cost of the facility is $8 million, and it is part of a $40 million construction and renovation program under way at several Anglo facilities across the nation.

Michael J. Richardson, Anglo American president, said the Omaha operation's profitability had warranted the investment.

Like all Anglo auctions, the Omaha facility protects dealers against false odometer readings. The plan guarantees that if a vehicle's mileage reading has been reduced, the selling auction will give the buying dealer a choice of a full refund or a cash settlement.

Smith opens auction

Dealers Auto Auction in Oklahoma City has opened under the ownership of Gary D. Smith, former owner-manager of Denver Auto Auction before its sale to GE Capital Auto Auctions.

The $5 million facility has four selling lanes, 30 paved acres and a reconditioning center. It opened earlier this month with 600 vehicles consigned and a selling rate of more than 50 percent.

Smith also owned the Dallas Auto Auction, Grand Prairie, Texas, before selling it to Anglo American Auto Auctions. Smith said he plans to keep his newest auction.

CalWest in business

CalWest Auto Auction held its grand opening last week with more than 500 cars consigned.

GE Capital purchased the two-lane auction in San Jose, Calif., in early September from a limited partnership that had turned the former truck depot into an auction.

Makers face higher California air cost

SACRAMENTO, Calif. — Costs of complying with California's clean-air programs are likely to increase dramatically for carmakers and car owners under legislation that goes ito effect July 1.

The state will collect as much as $4.5 million from carmakers to help administer the new auto-related smog programs that seek to reduce smog 5 percent per year.

A spokesman for the California Air Resources Board estimated that in the first two or three years, the assessment could be as high as $3 per car sold. After that, it should decline because a number of the projects will be concluded.

Based on registration data for 1987, a $3-per-car assessment would have cost General Motors more than $1 million; Ford Motor Co., more than $950,000; and Chrysler Corp., almost $400,000.

Currently, the Air Resources Board collects the board's actual costs for assembly-line and in-use testing of a maker's cars. GM said it paid the board $82,900 in 1987 for the testing program; Ford said it paid $42,000; and Chrysler reported paying $57,125.

DEALING WITH DEALERS

FROM PAGE 66

announced plans for a complete renovation of the BMW dealership in Honolulu.

CITIZENSHIP

Continuing its commitment to helping San Diego's homeless and jobless, **Bob Baker Enterprises and Automotive Group** once again donated $12,000 to the Rev. Joe Carroll's St. Vincent De Paul/Joan Kroc Center for the homeless. This brings megadealer Baker's cumulative donation and future pledge to the center to more than $150,000. Baker also donated a 1988 Ford Crown Victoria to Carroll. Baker's $12,000 donation to the St. Vincent de Paul/Joan Kroc Center was generated by a Labor Day weekend promotion. During the second annual promotion, Baker contributed $100 for each car sold during that weekend. The car, a check for $12,000 and a $30,000 pledge were all presented to Carroll by Baker during a news conference in which Carroll unveiled an award he recently received from the Archbishop of Canterbury for the "best shelter for the homeless in the world."

Gerald and Gail Roberts, Roberts Chevrolet-Oldsmobile, Green Cove Springs, Fla., celebrated the 50th anniversary of their dealership by presenting $50 checks to each of 50 charitable organizations. Later this year, the Oldsmobile dealership will be moved to a new facility in Orange Park. The Chevrolet dealership will remain in Green Cove Springs.

Bjorn Sefeldt, general manager of Nils Sefeldt Volvo, Houston, donated $500 to Houston's Discovery Zoo. The donation represents a portion of the proceeds from the dealership's first "garage sale." Volvo owners came to the sale to buy parts and accessories for their cars at reduced prices. "Our customers were pleased with their savings, and we were delighted to contribute to the children's zoo program. We're tentatively planning another such sale periodically," Sefeldt said.

ADVERTISING

The **Heart of Michigan Oldsmobile Dealers** selected J. Wilson & Associates, Albuquerque, N.M., as its agency. The 13-member group will be handled by Wilson's Detroit office. The agency now represents 22 dealer advertising groups, including 19 Oldsmobile dealer advertising groups.

The **North Mississippi GMC Truck Advertising Association** and the **GMC Truck Force**, Jackson, Tenn., have selected Geoff Sutton Advertising, Cordova, Tenn., as their agency. The agency handles 14 dealer advertising groups, including six GMC groups.

The Lubbock, Texas-based **$1 Chevy Team Dealer Association** has awarded its $350,000 advertising account to Strong Automotive Merchandising, Birmingham, Ala. The group has 17 dealer members.

The New York City-based **4-Star Chevrolet Dealer Association** has selected McCaffrey & Ratner, New York, as its advertising agency. The association, which is made up of Chevrolet dealers in New York's five boroughs, has an estimated $1 million advertising budget.

The Tri-States Pontiac Connection Dealers in Georgia, North Carolina and Tennessee has hired Terry L. Butz Creative, Waterloo, Iowa, as its ad agency. Tri-States Pontiac Connection officers include: **Richard Fortney**, Heritage Pontiac, Athens, Tenn., president, and **H.N. Long III**, Trotter Pontiac, Chattanooga, Tenn., treasurer.

The **Northwest Chevrolet Dealer Association**, Portland, Ore., awarded its $2 million account to Strong Automotive, Birmingham, Ala. The association has 14 dealer members.

Dorschel Chevrolet, Charlotte, N.C., and **Lou Bachrodt Chevrolet**, Rockford, Ill., have named Lewis & Freese Advertising, Virginia Beach, Va., as their advertising agency.

The Institute of Outdoor Advertising said a billboard from **Lathrop Jaguar**, Groton, Conn., placed in the top 10 percent of all of its entries for outstanding outdoor advertising. The billboard was created by VanEs Advertising, North Haven, Conn. The billboard depicts a large leaping Jaguar and the only words are Lathrop Jaguar, Groton.

The **Palm Beach Chevrolet Dealers Association** and the **Richard Kelley Organization**, a multi-franchise dealer group operating stores in Florida, Alabama and South Carolina, named Bateman, Bryan and Galles/Competitive Edge as their agency of record. The accounts are valued at $2.5 million in annual billings.

ALSO OF INTEREST

A new showroom display created for **Peugeot dealers** nationwide won a Gold Outstanding Merchandising Achievement Award from the Point of Purchase Advertising Institute, Jean-Philippe Fournier, national marketing manager for Peugeot Motors of America Inc., announced. Peugeot took top honors for best permanent display and storewide program in the transportation category. Said Fournier, "The contemporary, high-tech design of Peugeot's new showroom display reflects the sleek lines and high performance of the new Peugeot 405. This specially designed display also creates a highly visible Peugeot dealership within a multi-franchised store." Peugeot's compact showroom display units are constructed from extruded aluminum and finished in metallic charcoal gray. A free-standing information center presents model colors, trim levels and sales brochures. Separate information pylons placed near the cars highlight individual models. A video cabinet and radio display also are available. Peugeot's new showroom display was designed and created by DCI Marketing, Milwaukee, in conjunction with Peugeot Motors of America.

James Schouten and **Terry Gober**, formerly of the Crownrich Cos., have formed Automall Design Inc., Dallas. The firm specializes in automobile dealership facilities and is providing architectural services, construction management, dealer equipment, interior furnishings, executive recruiting and planning for auto malls, auto parks and single-point dealerships.

Study charts cost to own, operate cars

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

It will cost about $3,800 more a year to own, operate and maintain a 1989 Cadillac DeVille than it will a 1989 Ford Escort. Those figures are from a recent study by Runzheimer International, a management consulting firm based in Rochester, Wis.

"Larger high-priced luxury cars will obviously cost more for all associated transportation costs," said Mike Bassi, marketing vice president of the company's transportation division. Higher-priced cars depreciate more each year and owners pay higher taxes and steeper operating and maintenance costs, he said.

Imported luxury cars also cost more to own, operate and maintain. For example, total costs for a 1989 BMW 325 are about $8,429 annually.

Lower-priced compact imports are less costly. For instance, the total costs of a 1989 Honda Accord DX a[illegible]d at $5,025 and a Toy[illegible]s annual costs are estim[illegible]5,112. Each costs about [illegible] than the BMW 325 to o[illegible]in and operate. The Hond[illegible]d's estimated annual total costs are $25 less than those of the Ford Escort.

Another finding in the study is that total costs of a minivan are less than those of many compact cars. Also, some imported compact cars have lower total fixed and operating costs on a yearly basis than many U.S.-built compact cars, according to the projected cost analysis.

Luxury cars cost substantially more to own, operate and maintain. At one end of the spectrum, the 1989 Cadillac DeVille has annual fixed and operating costs of $8,881, the study found. That is 76 percent more than a subcompact Ford Escort with fixed and operating costs of $5,050.

It isn't only size that affects fixed and operating costs, however.

A standard-sized Chevrolet Caprice V-8's annual costs totaled $6,454. That's an annual difference of $2,427 or 27 percent less than the Cadillac.

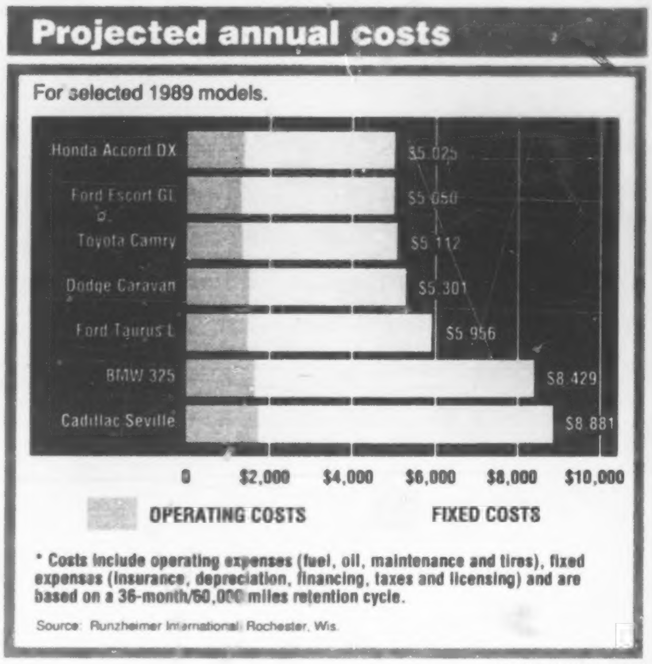
The fixed and operating costs of an intermediate Cutlass Ciera V-6 are almost as high as those of the Caprice. Its total costs are estimated at $6,216, only $238 or 3.69 percent less than the Caprice.

Total costs for other selected intermediate cars are about $200 a year less than those of the Ciera. The Chevrolet Celebrity V-6 has estimated annual costs of $6,095 a year, while a Ford Taurus V-6 costs $260 less a year to own, maintain and operate. Its total costs are about $5,956 annually.

Total estimated costs for two compact cars are each about $500 less than the least expensive intermediates. A 4-cylinder Ford Tempo GL has total costs of $5,500 per year and a 4-cylinder Chevrolet Cavalier's total costs are about $5,420.

Runzheimer analyzes fixed and operating costs of more than 200 models each year to set reimbursement standards and per-mile rates for many private businesses.

Operating costs include fuel, oil tires and maintenance; and fixed costs are a composite of insurance, depreciation, financing, taxes and licensing costs. Calculations are based on a 36-month, 60,000-mile trade-in cycle.



Projected annual costs

For selected 1989 models.

* Costs include operating expenses (fuel, oil, maintenance and tires), fixed expenses (insurance, depreciation, financing, taxes and licensing) and are based on a 36-month/60,000 miles retention cycle.

LEASING AID: *California firm's dealer plan runs from used cars to exotics*

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — International Bankers Acceptance Corp., a recently formed financial service firm, is offering lease financing programs to selected dealerships in California for new cars and for used cars up to five years old.

In addition, the company provides leasing programs for luxury automobiles, as well as exotics, classics and collector cars, according to S. Vernon Rodriguez, executive vice president.

The firm is a member of the Los Angeles-based Brittingham Group of financial service companies. Brittingham was founded in 1963 and today is active in luxury new- and used-car leasing, limo and daily car rentals and deluxe European motoring vacations.

"IBAC believes that both used-car leasing and luxury-automobile leasing are marketing niches of opportunity in the automobile leasing industry," Rodriguez said. "IBAC offers closed and open-end consumer leases via an indirect-leasing program."

While Brittingham does some individual leasing, Rodriguez said, the company decided to expand its operations about a year ago and established International Bankers Acceptance Corp., essentially as a lender for lease financing.

Rodriguez said the company offers the investment community short-term, high-quality automobile lease receivables in portfolios as low as $100,000. The receivables in the portfolio package consist of new- and used-car residual-value lease contracts acquired from franchised car dealerships and leasing firms.

"Under our program, the dealer is approved to work with IBAC," Rodriguez explained. "When a consumer decides to lease a new or used car, the consumer fills out a credit application that is telefaxed to our office.

"We check it out and when we determine that the consumer is a credit-worthy lessee, we approve and underwrite the contract and notify the dealer. The dealer then signs up the consumer, knowing IBAC has approved the deal."

After the transaction is completed, the dealer sells the total contract to International Bankers Acceptance, Rodriguez said.

"We buy the whole package, which also means buying the automobile and the contract, including the dealer's profit," he said. "The dealer no longer has anything to do with the contract or consumer. Disposal of the automobile at the end of the lease also is handled by IBAC.

"We have the contract, which is collateralized by the automobile, and we in turn sell it for a yield to our investor."

Although many dealers keep leasing contracts, Rodriguez said some prefer to sell contracts to sources such as his company because they do not have sufficient credit lines to keep the paper or they do not have enough working capital to hold the paper and remain liquid.

"Also, there are consumers who have difficulty qualifying creditwise, and dealers usually want to keep only the best paper, which is called A Credit Paper," Rodriguez said. "Since we have a source for B Credit Paper, we can take a little more of a risk than a dealer can."

Although one-stop leasing service is new to Western dealers, especially in California, Rodriguez said International Bankers Acceptance has approved some 150 dealers in California since it was organized "in a formalized fashion" last May. He said those dealers are now submitting lease contracts on a daily basis.

Rodriguez said the program covers luxury used cars because their potential demand is tremendous.

According to International Bankers Acceptance, new-car manufacturers traditionally have been the principal funding source for automobiles. However, because they are concerned with the movement of new vehicles, not the turnover of used cars, their leasing programs have been unavailable to their dealers' used-car departments, Rodriguez said.

"The potential demand for used-car leasing is tremendous," he said. "In 1985, consumers acquired nearly 16 million used autos, representing some $100 billion in sales."

U.S. cuts deficit in auto trade

August imbalance shows 6.5% dip

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in cars and light trucks improved 6.5 percent in August compared to the year-earlier month.

The improvement was the result of a 31.8 percent increase in export value and a 2.3 percent decline in the value of imports.

August's drop in the automotive trade deficit followed a decline of 20.7 percent in July.

When the 12-month period ended Aug. 31 is compared with the year ended Aug. 31, 1987, the automotive trade deficit shows a 5.1 percent improvement.

As of August, the United States was running an annualized trade deficit of $43.21 billion in passenger cars and light trucks. That compares with $45.49 billion a year earlier. The annual totals reflect a 5.5 percent decline in the number of vehicles imported to the United States over the most recent 12-month period. Exports jumped 15.7 percent during the period.

Trade numbers released by the U.S. Commerce Department show a trade deficit for cars and light trucks of $3.17 billion in August. Total car and light-truck exports had a value of $599.40 million during the month, and monthly car and light-truck imports were valued at $3.77 billion. The automotive trade deficit for August 1987 was $3.39 billion.

Passenger-car exports reached 47,824 vehicles in August, with an estimated value of $486.70 million. Light-truck exports for the month totaled 11,462 vehicles, having an estimated value of $112.70 million.

Passenger-car exports were up 18.0 percent to Canada and 302.2 percent to Japan.

On the import side, Japan continued to show a downturn in both the quantity and value of vehicle shipments during the month. Car shipments also declined from West Germany, Sweden, Yugoslavia, the United Kingdom and Italy.

Meanwhile, imports from Canada, Brazil, South Korea, Mexico, France and Brazil showed growth in August.

Total vehicle imports in August were valued at $3.76 billion, down 2.3 percent from $3.86 billion in August 1987. There were 393,113 finished vehicles imported to the United States in August 1988, compared with 408,118 last year.

Passenger-car imports reached 335,975 units for the month and had a value of $3.34 billion. Light-truck imports totaled 57,138 units, with a value of $426.88 million. The value of imported trucks increased 5.0 percent in August, although shipments fell 12.6 percent. That same phenomenon occurred in June and July, indicating that reduced sales of imported trucks are having little effect on the overall trade deficit because of higher prices.

Japanese car imports dropped 19.0 percent for the month while the value of the shipments fell 14.9 percent. Japanese truck imports were off by 21.8 percent and their value was down 12.7 percent. Japan shipped 178,475 cars to the United States in August, down from 220,229 cars a year earlier. Truck shipments totaled 39,596 units, down from 50,664 in 1987.

Canada shipped 39,927 cars to the United States, a 37.6 percent increase. South Korean shipments staged a slight recovery in August, increasing 8.0 percent. Korean shipments have been depressed for several months due to strikes.

Mexico shipped 13,330 passenger cars to the United States in August, up 27.9 percent from a year earlier. Brazilian automakers exported 5,630 cars to this country, up 30.3 percent.

West German shipments for the month fell 35.7 percent from August 1987. Sweden's exports dropped 30.1 percent.

Yugoslavia shipped 1,000 vehicles in August, according to the Commerce Department, compared with 3,400 cars a year earlier.

Imports face struggle for big bucks

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LAGUNA NIGUEL, Calif. — Next fall's entry of two Japanese high-end brands into an already crowded luxury-car market will quickly "make upscale cars almost commodities," with styling and image key competitive elements.

Toyota's Lexus and Nissan's Infiniti divisions will enter the market in the 1990 model year, and improving U.S. competitors will create "an upscale battleground like the low-end car and small-truck segments are now," said David E. Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan.

Cole spoke at a BMW Technical Symposium here, less than a hour's drive from the U.S. headquarters of BMW's newest Japanese competitors.

"You can't differentiate on features (in the 1990s) on high-end cars," Cole said.

"Styling will be critical. It's already been demonstrated that the Japanese can move very quickly."

In a reference to long European product cycles compared with much shorter Japanese cycles, Cole added, "Ten years is an eternity when dealing with the Japanese."

However, while shorter product cycles will help the Japanese make adjustments in a new segment, they reduce profitability, noted Hans-Herman Braess, vice president of research for BMW AG, in reaction to Cole's keynote speech.

Braess acknowledged that the largest vehicles from Lexus and Infiniti, which used the BMW 735i as a design target, will press BMW at the upper end of the market much as the Acura Legend sedan and coupe have at the lower end of BMW's range, the 3 series.

"We may lose some sales to them," Braess admitted.

Parts group fights Clarion's subzone plea

WASHINGTON — The Motor and Equipment Manufacturers Association is opposing a request for a Foreign Trade Subzone filed with the U.S. Commerce Department by Clarion Manufacturing Corp.

Clarion has an assembly plant for automotive audio equipment in Walton, Ky. The company supplies original equipment to several Japanese automobile manufacturers in the United States and is a major aftermarket supplier.

Foreign Trade Subzone status would allow Clarion to pay lower tariffs on components it imports for final assembly and sale in the United States.

An increasing number of automotive suppliers have begun petitioning the Commerce Department for Foreign Trade Subzone status now that most automobile assembly plants are covered by the reduced-tariff program.

Although U.S. auto part manufacturers have opposed the Foreign Trade Subzone program for several years, the Commerce Department's Foreign Trade Zones Board has yet to deny an application for an automotive-related subzone.

IACOCCA

FROM PAGE 1

Asked if GM has turned the corner, the Chrysler chairman said, "Turning the corner means do they have their costs in line with the volume they can expect? That last phrase is the key phrase.

"If they want to continue to say we're going to get 40 (percent market share) at all costs, they are not going to turn the corner. Forty-five is a dream. Thirty-five, if they accept that, and do what we had to do — pare down the company, that means all areas are in line with that objective — then they've turned the corner."

"GM is a good company. I've watched them for 40 years. They're good on product and sure, they make some mistakes, like I do all the time. But I think they're on their way to being what they've been — the premier car company in the world."

Iacocca also said that as Chrysler revamps its two product hits for the 1990s — the minivan and Jeep Cherokee — he wants to avoid the mistake made at Ford Motor Co. in its handling of the 1964 Mustang.

"I got burned so bad on the Mustang I could write another book on how it happened," Iacocca said of the instantly successful Mustang, which by 1970 suffered plummeting sales after several reworkings.

"The truth is, we blew it. We kept killing it little by little, and we ended up with a camel done by a committee. Everybody got into the act because they know how to change a winner."

Iacocca said Chrysler executives are aware of that history as the minivan and Cherokee are restyled for the early 1990s.

"The big argument now is the new Cherokee because the other one is almost like a cult," Iacocca said. "We keep researching it with all the Jeep owners, and they say, 'Drop dead.' It's tough. It's like the first Mustang."

About the Cherokee, Iacocca said, "I have a feeling that you can't horse around too much with what appeals as an accepted no-nonsense durable car/truck/station wagon. We've researched the new one. It's great with a body of owners that never had a Cherokee. But if you had a Cherokee, it's tough to satisfy. That's a crapshoot. I don't know quite yet what to do."

Asked if a similar pitfall might exist with a minivan restyling because Chrysler pioneered the segment, Iacocca said, "Don't worry, I'm worried about that too."

"It's tough to do, yet you must keep aggressively modernizing it. Get the repairs per hundred down on a continuing basis, add interior things the women want, maybe give 10-year rust warranties if you can do it."

Even though competitors in the minivan market will be "coming in right through the woodwork" in the coming years, Iaccoca said Chrysler is considering additional production capacity.

"We're looking at a possible third minivan source. I guess we believe in it," he said.

Iacocca said a determination would be made "in the next two years."

One possibility, Iacocca said, is to add "brick and mortar" to the St. Louis plant. Chrysler also builds minivans in Windsor, Ontario.

AUTOMOTIVE NEWS/JOE WILSSENS

Iacocca: "I got burned so bad on the Mustang I could write another book"

"When we went for the second source of the minivans, we did it a little bit tentatively because we knew Windsor was at 270,000 units," Iacocca said. "So we took St. Louis 2, which we knew wasn't going to get much over 160,000 units. We're missing 100,000 just by mistake. If we had put in a bigger plant, we'd be selling them right now."

Iacocca said he believes in the strength of the minivan market because the vehicle appeals to four-door sedan buyers.

"Ninety percent are bought by car buyers. I'm selling virtually one-for-one Caravan/Voyager against Taurus/Sable. But they say (Ford) hit a four-door market. Well, I've got these rich cars, and they've got four doors, but one slides and one opens funny.

"With all these new (minivan) entries, all you are going to do is cannibalize the four-door sedan market. No question about that."

Iacocca said that after launching the new Cherokee and minivan in the 1990s, the company's next product priority is the LX/LH car platform, which will debut in the fall of 1991.

The platform is expected to be larger than Chrysler's existing K-platform and variations.

Iacocca indicated all three Chrysler franchises, including Jeep-Eagle, will likely receive products from the new platform.

"All three franchises and three brands will make their distinctions as they see fit," he said.

Iacocca said Chrysler's product line is well-positioned for the coming decade, although he expects it to take five years to establish the Eagle car brand created from the purchase of AMC.

He also suggested that the subcompact Dodge Omni/Plymouth Horizon may remain in Chrysler's product lineup longer than anticipated. Iacocca previously suggested the model would be phased out by late 1991 or early 1992.

"We have to stay with the Omni/Horizon a little longer than maybe we wanted to because we have no possibility to source (a replacement) unless we looked at the Koreans, the Malaysians and the Taiwans."

Asked if such sourcing is likely, he said, "Maybe. We're always talking, but nothing is happening.

"We had always felt in this company that Mitsubishi could always supply us with a little car. But now they're saying to me 'We're thinking of going to Korea or Malaysia.'"

Iacocca also said that he is not interested in marketing a minicar that would be "an entry-level vehicle against the used-car market."

"The next generation of Chrysler executives might want them, but I don't want them," he said.

Iacocca said Chrysler will use as image builders Chrysler's TC by Maserati and vehicles obtained through its purchase of Lamborghini.

This fall Chrysler curtailed its plans with Maserati and formed a relationship with Fiat. The TC coupe is expected to be introduced in 1989, although its debut initially was planned for early 1987.

"You either have to control a plant in Europe or you have to have a company like Fiat backing you," Iacocca said, explaining the troubled TC launch.

"Too much is done on the basis that we build cars only by hand in Italy and we don't worry about quality," he said. "That's okay if you're building an exotic sports car. But if you're starting a production line, you don't have the quality and the safeguards to make sure the car is right.

"We had all kinds of start-up problems being on a foreign shore and having a labor force that was not run by us. We put in the paint system but beyond that, it was in the hands of other people.

"We said it just would not meet the quality standards of Chrysler, and we couldn't put our name on it."

Iacocca said the car is now being shipped following a production revamping led by Richard E. Dauch, Chrysler Motors executive vice president of manufacturing.

The new relationship with Fiat, by which Chrysler will market Alfa Romeo models, is expected to grow.

Iacocca said he hoped the linkup with Fiat "would bode well for something more because they are a powerful worldwide company."

Asked if future deals might include joint production, he responded, "Who knows? Maybe."

Chrysler's dealings with Renault, which began with the purchase of AMC, are also likely to expand, and Iacocca described the relationship as "twofold now."

In addition to the componentry Chrysler is buying from the French automaker, Iacocca said Renault is likely to handle Jeep distribution in additional European markets, and it may be involved in Jeep production ventures.

"We have given them France and Italy for Jeep distribution," he said. "They are doing a good job — so good I think we are about to give them Spain and Portugal.

"But we have a lot of new Jeep stuff coming, so our discussion with them tends to be all involved around the total Jeep line worldwide."

Iacocca said discussions included possible joint production because Jeep is developing a cult following in Europe.

Iacocca said he may visit Brazil in February as part of an expanded program in South America. Chrysler currently produces Jeeps at a plant in Valencia, Venezuela, which it inherited with AMC.

"The idea is to joint-venture with a number of South American companies beyond Venezuela," Iacocca said. "Probably you start with Jeep. Like any emerging country, you start with knock-downs until there is an infrastructure of parts there."

Iacocca also said that although the First Automobile Works in Changchun, China, did not select the Dodge 600 for car production, Chrysler expects eventually to complete a vehicle project in China. With its AMC acquisition, Chrysler received part ownership in Beijing Jeep Corp., which produces a Cherokee and another utility vehicle.

Iacocca, who recently returned from a trip to China, said First Automobile Works is considering adding an axle line. Chrysler sold tooling and machinery to First Automobile Works to produce 2.2-and 2.5-liter four-cylinder engines.

"I think when they see the help we have given them with the engine line and the other help they have asked us for, we will probably do some kind of a car/truck program with them in the immediate term," Iaccoca said. "I don't know when."

Iacocca also said while future joint ventures are likely, Chrysler is unlikely to make any additional significant automotive purchases.

However, investments are likely in nonautomotive areas, as the Chrysler Technologies subsidiary grows and seeks defense business.

Iacocca said Chrysler Technologies Chairman Paul E. Wright, who was appointed in September, "will probably come up with some acquisitions of smaller subsuppliers rather than prime suppliers to the Pentagon."

Iacocca's goal is to double the size of Acustar, the $3 billion component manufacturer that Chrysler tried to sell earlier this year. The sale was aborted after the UAW protested.

"With currency straightened out at least for now, they should be good contenders. They've got some great plants. It's up to them to go after the world componentry business."

Chrysler, Renault agree to drop Eagle Medallion

PARIS — Renault will not resume production of the Medallion, a car sold by Chrysler Motors' Eagle dealers.

Renault decided against moving production of the American version of the Renault 21 to another plant and Chrysler approved the decision, according to sources at the French automaker and in the United States. The announcement is expected this week.

The decision to discontinue the line was predicated on the dollar's low value, the modest sales performance — only 12,731 in the first 10 months of 1988 — and Renault's need to use the capacity for production of its new Renault 19 and for the 21, which is a strong seller in Europe.

American Motors first introduced the compact sedan at the Chicago Auto Show early in 1987. Production had begun in October 1986 but was halted because of market uncertainty [illegible] Chrysler acquired AMC in Augu[illegible] Chrysler resumed sales of a modif[illegible]n, which stayed in production until the end of July 1988. Altogether, 36,000 have been exported to the United States.

FORECAST

FROM PAGE 1

gressive production schedule.

Both analysts predicted that an aggressive GM could force Ford and Chrysler back into the incentive wars, leaving the two smaller makers short of inventory in the first quarter.

If GM sticks to its latest estimate for the first quarter, it will end March with about 80 days' worth of cars on hand and at dealerships, Luckey predicted. Typically the domestics run in the 60s at that time of the year.

But even with its revised plans for the last quarter of this year, GM's production for the quarter is scheduled to run nearly 13 percent ahead of last year's pace. And that means GM is scheduled to fall only 1 percent short of its total 1987 car production total.

*Updated

Ford expects to assemble 474,000 cars in the first three months of next year, a dip of 1 percent from the beginning of 1988. Its latest fourth-quarter plan is to build 457,000 cars, off 1 percent from the 1987 quarter but up nearly 6 percent, or 25,000 cars, from what it had scheduled in its September forecast.

Ford's updated fourth-quarter schedule means it would end this year less than 1 percent below its total production for 1987.

Chrysler projects it will build 272,000 cars during 1989's first quarter, 4 percent more than in 1988. Its fourth-quarter 1988 schedule has been hiked 1 percent from its September forecast, but more than 4 percent from the number it actually built in the last quarter of 1987.

If its fourth-quarter plan holds true, Chrysler will build 4 percent fewer cars in all of 1988 than it did in 1987.

All of the transplant companies scheduled increases for the first quarter compared to the comparable period of this year.

Honda of America Manufacturing Inc., targets production at 99,400 cars for the first three months of next year, an increase of 8 percent. However, it reduced its fourth-quarter schedule 2 percent, or 1,500 units. That would still give Honda a 7 percent increase over actual production in the fourth quarter of 1987 and a 12 percent increase over full-year 1987.

New United Motor Manufacturing Inc. expects to assemble about 45,000 cars in the beginning of 1989, 8 percent more than the 41,738 built during this year's first quarter. Its estimated fourth-quarter schedule is running 54 percent behind the 1987 quarter, which would mean that NUMMI plans to end this year 31 percent behind its full-year 1987 output.

Nissan Motor Manufacturing Co. U.S.A. projected first-quarter output of about 30,000 cars, 48 percent more than the comparable period in 1988. Its fourth-quarter schedule is unchanged from its previous estimate.

Truck build is highest since May

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled U.S. truck production of 92,188 units was the highest since the week ended May 21, when 92,256 trucks were built.

U.S. truck output last week was 2.17 percent above the prior week's 90,233 and 10.17 percent above the year-ago week's 83,679.

Year-to-date, U.S. makers have built 3,703,736 trucks, 7.20 percent more than the 3,454,873 completed at this point last year.

Total planned domestic auto production last week was 163,466 units, 1.52 percent below the previous week's 165,997 but 8.56 percent more than the year-ago week's 150,582.

So far this year, the industry has assembled 6,348,694 cars, 1.19 percent below the 6,425,405 completed by this time last year.

Last week's scheduled U.S. car output was shared as follows: General Motors, 50.16 percent; Ford Motor Co., 24.34 percent; Chrysler Motors, 16.00 percent; Honda of America Manufacturing Inc., 4.59 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.49 percent; Nissan Motor Manufacturing Co. U.S.A., 1.26 percent; New United Motor Manufacturing Inc., 0.16 percent.

GM's Detroit truck plant was closed last week for schedule adjustments. The plant is expected to reopen Nov. 28.

GM's Reatta Craft Center in Lansing, Mich., shut down last week to prepare the body shop for convertible output and to make paint shop changes. The plant is expected to resume operations Nov. 28.

Overtime was slated last Saturday at these GM plants: Lordstown, Ohio; Shreveport, La.; Moraine, Ohio; and the Pontiac West truck facility in Pontiac, Mich.

Ford scheduled overtime last Saturday at its Edison, N.J., and Lorain, Ohio, plants.

Daily overtime is slated at all Ford plants today, tomorrow and Wednesday.

All car and truck plants will be idle Thursday and Friday for the Thanksgiving holiday.

Car production rises in Canada

Canadian automakers scheduled assembly of 17,883 units last week, up 10.34 percent from 16,207 the prior week, but 8.82 percent below the year-ago week's 19,613.

So far this year, 938,190 cars have been produced, 32.97 percent more than the 705,565 completed at this point last year.

The industry scheduled 21,453 trucks last week, 8.46 percent above the previous week's 19,780 and 20.48 percent more than the year-ago week's 17,806.

Year-to-date, 829,984 trucks have been assembled, 13.10 percent more than the 733,876 built by this time last year.

General Motors' Oshawa (No. 2), Ontario, plant remains idle for model changeover. The plant is expected to resume production Jan. 3, building the Buick Regal and Chevrolet Lumina.

Tale of two cities

One plant dies; one blossoms

Chrysler contrast: Kenosha, Normal

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

This is the tale of two cities that share a car-building story.

Though similarities exist between the two, they do not share the same fate.

Those who have lived in these cities have encountered and endured pendulous economic, social and psychological extremes.

And they've survived.

These cities have something else in common. They are divided by the same employer, Chrysler Motors.

Separated by 150-odd miles as the corporate jet flies, Normal, Ill., and Kenosha, Wis., are geographically close. Yet consider their juxtaposition: For some 42 days this year, the plants in these two cities will most vividly illustrate the passing of auto manufacturing's guard, as Chrysler builds cars in one of the country's most antiquated auto plants and, via Diamond-Star, in the newest.

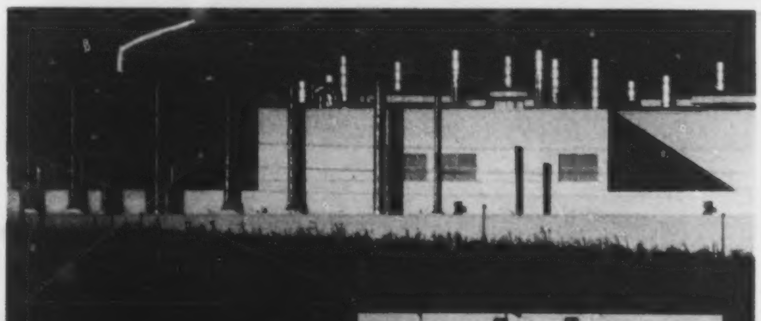
And, thanks largely to the changing way in which industrial America conducts its business, Dec. 22 will mark the end of another era, as Kenosha's car plant closes.

This is a tale of how the art of automobile manufacturing affects the people in that car-building story.

The trip to Kenosha is 55 minutes of driving along toll roads and Interstate 94 from Chicago's O'Hare airport. The city lies seven miles north of the Illinois border on Lake Michigan.

The gauntlet up I-94 outside the city is flanked with factory outlet shopping arcades and an occasional adult book store. A coal-fired power plant is five miles south of town and a nuclear power plant sits a bit further downstream.

Blues songs are written about places like this.



WELCOME TO

AUTOMOTIVE NEWS/JOE WILSSENS PHOTOS

Industry's two faces show varied expressions with Diamond-Star Motors, above, and Kenosha's nearly 100-year-old lakefront plant

WELCOME TO
Port of Kenosha

It's 6 a.m., and it's cold and dark. A handful of first-shift workers, carrying lunchboxes and mini-coolers, stamp out breakfast cigarettes in a gravel parking lot. As they cross the street, they appear resigned not to try and race the blustery winds that gust in front of Gate 26 at Chrysler's main Kenosha plant.

A man of medium build, dressed in a navy blue UAW baseball jacket, climbs out of his American Motors Concord sedan. As he walks through the gate, the light from the plant's halogen gas lamps outlines his military style flat-top haircut.

On the bumper of his car is a black-on-white sticker. It reads, "Iacocca Is A Liar."

Makers trim health costs, spur conflict

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

In their drive to cut the costs of treating workers with psychiatric and substance abuse problems, automakers are in the thick of a nationwide controversy over "managed care," a system that restricts and monitors treatment.

A federal judge in Flint, Mich., will decide this week whether to dismiss a suit against Blue Cross and Blue Shield of Michigan brought by physicians caring for General Motors workers. The Flint-area workers are in a pilot psychiatric managed care program administered by Preferred Health Ltd., Wilton, Conn.

The 10 physicians seek an injunction to stop the pilot. They charge that the program unlawfully interferes with the physician-patient relationship under Michigan law.

The pilot began in January and is scheduled to run until June 1989. It covers about 125,000 GM workers, retirees and dependents who are covered by traditional Blue Cross insurance, as opposed to a health maintenance plan.

According to a Michigan health-care provider, approximately 7 percent of those covered, or about 8,750 persons, would be expected to use the program during a calendar year.

The physicians filed suit in February.

In September, Chrysler Motors became the first automaker to launch a managed care program for its entire workforce. It, too, is managed by Preferred Health. The program is expected to cut $10 million next year in the cost of care for psychiatric and substance abuse problems, Chrysler said.

This year, the cost of caring for workers with those problems will total $40 million to $50 million, Chrysler said.

The cost of mental health benefits at GM rose 18.5 percent between 1984 and 1987 — to $83 million, though the number of people eligible rose by only 5.7 percent, GM said.

In the lawsuit against Blue Cross, the psychiatrists said in affidavits that monitoring done by telephone by case managers at Preferred Health undermines treatment. They said the monitoring has made care difficult and at times inadequate, in one instance for a psychotic and potentially dangerous patient.

Some doctors' affidavits also charge that Preferred Health case managers, who are not physicians, suggest more aggressive drug therapy "in an effort to promote

Japan's yen for flexibility

Small production savings mean big gains in currency upswing

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — At Akebono Brake, the boxes carrying parts to the assembly line have been reduced in size. That makes it easier for workers to move between them. The saving: a tenth of a second.

Some machinery was narrowed by one foot. Workers save a half second.

Those fraction-by-fraction moves toward higher efficiency are taking place throughout the Japanese industry. While starting with a need to cut costs in the face of the yen's escalation in value, the net result is a high degree of flexibility. If the auto industry is racing toward many niches requiring low-volume lots, as many analysts predict, then the Japanese are first out of the blocks.

Masayoshi Ikeda, professor of economics at Chuo University, cited flexibility as the key asset of the Japanese makers. That flexibility means shorter development times for new models. All companies are trying to reduce that leadtime, and the Japanese have been highly successful.

For instance, Honda has reduced its leadtime to 39 months. Toyota may cut that to 24 to 36 months.

Ikeda said the most important factor in speeding up the process is improved efficiency of suppliers.

Three years ago, when the Japanese companies were reeling from the effects of the yen's ascent, most makers laid out ambitious goals to cut costs. To do so, they overhauled their production systems and leaned heavily on their suppliers to do the same.

In the fall of 1986, after Nissan Motor Co. recorded — to much embarrassment — its first operating loss, the company called for a major effort to increase productivity by 30 percent and, in essence, cut costs. That goal was largely accomplished when the company reported it reduced operating costs by about 94 billion

Buffalo car dealers start own auction

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

It took just 20 minutes for members of the Niagara Frontier Automobile Dealers Association in Buffalo, N.Y., to snatch up $550,000 of Class A stock at $5,000 per share to build the Greater Buffalo Auto Auction.

Next month, the dealer group is expected to make a second stock offering to its members to raise $1 million to partially finance construction of the proposed $7 million facility.

In a novel business venture for dealer associations, the Buffalo group is building its own five-lane auto auction complete with a car wash, reconditioning center and restaurant on 150 acres on the outskirts of Buffalo in Alden, N.Y.

LOW COST

O'Connell vows GM will be best

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

O'Connell says belt tightening will continue to meet 1992 goal

AUTOMOTIVE NEWS/JOE WILSSENS

DETROIT — General Motors' chief financial officer predicts that the automaker will reverse its position as the high-cost domestic producer and become the lowest-cost domestic producer by 1992.

GM already has realized some benefit from its massive belt-tightening, said Robert O'Connell, who in July was named executive vice president in charge of the finance group and General Motors Acceptance Corp.

"The benefit will accumulate, and I think the 1990-1992 era has a real potential for GM to be the low-cost domestic producer," he said.

Auto analysts generally agree that GM's strong third quarter showed that it has turned the corner on the profit front, but the company remains the high-cost domestic producer.

O'Connell contends that key factors in GM's cost structure will show dramatic improvement by the 1990-1992 time frame.

GM has promised its shareholders that its North American factory utilization rate will rise to 100 percent by 1992. GM's truck plants are already there but the utilization rate is only 80 percent at its car plants, O'Connell said.

He didn't confirm that more plants must be closed to reach the 100 percent goal. However, other GM executives, including Chairman Roger B. Smith, have acknowledged that more plants will be idled. Analysts expect GM to close as many as four more assembly plants in the coming years.

Through attrition, GM will eliminate 20,000 hourly workers annually, O'Connell said.

"We want to take a very prudent approach to this, one that is market sensitive and employee sensitive, and do this right in terms of improving our capacity utilization to 100 percent," O'Connell said.

In addition, he said industry sales could be stronger than anticipated, giving GM the potential to improve market share. GM would have an advantage in some product lines over capacity-constrained Ford Motor Co. And stronger GM sales would immediately boost the automaker's factory-use rate.

"We think that our product program is very strong relative to the competition," he said. "Our primary objective is to profitably raise our market share, and that applies to keeping costs under control, improving our efficiency from a variable cost standpoint and also working on our fixed costs in terms of ongoing improvement in our cost structure."

GM guaranteed its shareholders that it would cut $10 billion from its 1986 cost structure by 1990 and has since upped the ante to nearly $13 billion.

O'Connell said the cut in the number of models offered, increased sharing of components among models and a reduction of possible build combinations, now numbering in the millions at some GM plants, will help GM reduce costs significantly.

"We started many efforts toward that, but it will be the 1990 time frame when it starts to get into that powerful level," O'Connell said.

Product simplification can reduce costs by $200 to $250 a vehicle, for a savings of more than $1 billion annually, O'Connell estimated. Analysts suggest the savings to GM could exceed $2 billion.

GM has cut the number of models offered to 140 this fall, 20 percent fewer than in 1986. The goal for 1992 is 120 models.

Capital spending is slowing, and this year's total is expected to be less than last year's $7.1 billion. GM's all-time high was $11.7 billion in 1986.

O'Connell said that overseas operations are expected to be a continued strength for GM, just as they have been for two years, following the sell-off of unprofitable businesses and the restructuring of remaining operations.

He also said that GM's acquisitions, Electronic Data Systems and Hughes Aircraft, will be major contributors to GM's earnings.

In addition, Delco Electronics, the other part of GM Hughes Electronics, predicts significant growth with the increase in vehicle electronics.

O'Connell said EDS has potential for more GM business and "limitless potential for outside business," even though EDS founder H. Ross Perot is bidding against the company for a key Texas Medicaid contract.

In the short term, opinions vary widely among analysts as to how GM will do in 1989. Some predict GM will earn more than in 1988; others predict the opposite. The analysts' scenarios for the overall economy run the gamut.

While O'Connell is prohibited from forecasting earnings, he does predict a mild slowing in the economy's growth rate but with continued expansion. GM's forecast for 1989 new-car and truck sales is 15.0 million, down from 1988's expected 15.6 million.

O'Connell, like other GM executives and some analysts, predicts GM will boost its market share. GM hopes to gain one more percentage point of the car market and one extra point of the truck market.

"Our improvement in market share would more than offset any mild softening in the overall market, so we are looking for a very good year in 1989," O'Connell said.

Such strong expectations have prompted some auto analysts to suggest that GM boost its dividend minimally or offer an extra year-end dividend.

However, O'Connell said GM won't raise the dividend until it knows that the higher level can be sustained. GM will watch how the total economic picture develops in 1989 before it hikes the dividend, he said.

"We do have a fundamental improvement in the basic earnings of the corporation," O'Connell acknowledged. "That is a strong supporting factor, but it has to include the total outlook for the company, which includes the economy and the overall conditions in the automobile industry."

Earlier this month, GM declared a dividend of $1.25 a share on its common stock, the amount it has paid since the second quarter of 1984. Dividends for the Class E and Class H stock were increased to 17 cents a share and 11 cents a share, respectively, to reflect the growth in profitability at EDS and GM Hughes Electronics.

As chief financial officer, O'Connell will be a key player in turning the GM ship around. Should that effort be successful, O'Connell, now 50, may well be in line to become a future company chairman. The chairman customarily has been the chief financial officer, and O'Connell's predecessor, F. Alan Smith, is among those mentioned as a potential successor to Chairman Roger B. Smith, who retires in 1990.

O'Connell was named executive vice president in July when F. Alan Smith became executive vice president in charge of the operating staffs and public affairs group.

'88 sales climb for Campbell

First disclosure by public dealer

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — In the first public disclosure of quarterly earnings by a U.S. car dealership, Campbell Automotive Group said its sales for the first nine months of 1988 rose 3.01 percent to $109.4 million.

The eight-dealer chain, which is half-owned by Lex Service PLC, a publicly owned British auto retailer, said 1987 sales for the same period totaled $106.2 million.

While vehicle sales revenue rose a scant 1.47 percent, to $89.8 million from $88.5 million, parts sales were up 9.52 percent, to $11.5 million from $10.5 million.

However, the fastest growing revenue center was service and body shop operations, up 12.33 percent to $8.2 million from $7.3 million.

The company said it plans to expand gradually, using the $13.5 million in cash generated by the Aug. 9 sale of a half interest to Lex.

John B.T. Campbell, president of the group, said his organization will concentrate on the southern California market for dealership acquisitions. Campbell said that restricting expansion to one geographic area allows group executives to keep a close eye on operations.

The group's business plan calls for controlled growth and a low debt-to-equity ratio of 0.85-to-1, Campbell said, despite a recent offer from a bank to lend the company capital for expansion at a ratio of up to four to one. That means the bank was willing to lend the company three additional dollars — for a total of four dollars of debt — for every dollar of equity.

Campbell, who recently spoke to a West Coast meeting of the Society of Automotive Analysts, predicted that public ownership of dealerships will grow slowly.

"This is not the beginning of a wave, but the beginning of a trickle," Campbell said.

He said that five conditions must be met for a public offering to

Big-truck dealers tally 9-month profit boom

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Profits of medium- and heavy-truck dealers have rebounded strongly this year.

And the prospects for dealers to continue improving their profitability in 1989 are very good if they can further tighten control of their operations, Bob Young, manager of the American Truck Dealers Consulting Services, told an ATD committee meeting in Orlando, Fla., recently.

The ATD is a division of the National Automobile Dealers Association. Consulting Services is the new name for its Dealer 20 Group activity. The name change reflects ATD's intention to expand beyond 20 Groups into one-on-one consulting services for individual dealerships.

For the first nine months of this year, dealers' sales and profits indicators were up, according to ATD's critical variables analysis, based on the average of its 20 Groups. ATD has 11 of these 20 Groups, five more than last year. They represent at least 150 dealerships.

Fixing the precise number of dealerships in the groups is difficult, Young said, because of the large number of megadealers represented. A group might have 14 members, but they could own 30 dealerships among them, he added.

At any rate, dealer net profit as a percentage of sales climbed to 2.5 percent during the first nine months of calendar 1988, up sharply over the 1.8 percent net profit showing of the similar 1987 period, according to ATD's critical variables analysis.

Young called the 39 percent improvement "very encouraging," though obviously the net profit still doesn't compare to some other automotive dealer segments.

Again, dealers' return on assets increased to 10.7 percent this year from 6.6 percent in the year-earlier period.

Dealers' return on equity improved to 34.5 percent from 24.9 percent last year, and expenses as a percent of gross profit also dropped.

Dealers spent only $88.70 for every $100 of gross profit this year compared to an outlay of $94.80 in the year-earlier period.

Their new- and used-truck gross profits, along with their parts and service receivables, were up modestly from last year.

They averaged $291,500 a month on parts sales this year compared to $268,000 a year ago, while retaining the same 25.1 percent gross profit on such sales, Young said.

Increasing their parts sales while holding the line on gross profits "means that they didn't have to give the store away to get the additional business," Young said.

He conceded that medium/heavy-truck sales might "drop off a bit" next year, "but the rest of the business should hang in there pretty strong. And it's the other part of the business that's carrying the dealership anyway."

Industry analysts, like Drexel Burnham Lambert's David Healy, predicts calendar 1988 Class 8 sales of about 145,000, dropping to about 140,000 in 1989. Ford truck operations and Volvo GM Heavy Truck officials generally concur with those projections.

Ford sees the overall Class 4-8 medium/heavy segment, which it projects at 330,000 sales this year, dropping to 320,000 in calendar 1989.

RECREATION ON WHEELS

Chevrolet signs 103 converters

As of mid-November, Chevrolet had signed 103 new converters, giving it a total of 167 approved for its pool system.

With those signings, Chevrolet's main focus will be on the marketing side of its van program and in getting dealers more involved in retailing those units, said Thomas Pfingst, Chevrolet's assistant director of fleet and special vehicle sales.

Chevrolet is currently introducing a new dealer booklet that includes a listing of all its van converters. The book provides ad space for upfitters to depict their products. It is set up to include new companies as they are signed up.

Separately, some Elkhart, Ind., van converters reported an overabundance of van chassis equipped with Chevrolet's 305-cid V-8 engine and a real shortage of 350-cid V-8 models.

Pfingst said he was unaware of the imbalance. Chevrolet has no plans to provide incentives on the 305 V-8 engine chassis.

Meanwhile, Elkhart converters also reported a real scarcity of GMC compact Safari van chassis.

Detroit's Class A's

General Motors and Ford both missed out on their original November introduction date for their new Class A motor home chassis.

RV TRENDS

JOSEPH BOHN

The companies have, however, begun taking orders for the units, which they now expect to begin producing in January.

Chevrolet said it looked forward to its third consecutive 100,000-unit-plus RV sales year in the 1989 model year. That figure includes van conversion products, as well as its current 14,500-pound GVW Class A and the new 16,000-pound GVW unit and its Class C cutaway chassis.

Chevrolet will offer a toll-free telephone number as a "security blanket" for buyers of its new Class A, which puts them in touch with Chevrolet dealers and independent RV centers capable of servicing the chassis. Appliances added by motor home manufacturers are not included in the program.

Ford is raising production of its small 11,500-pound GVW Class A and its Class C cutaway chassis, as well as gradually phasing in the new 16,000-pound GVW Class A.

It expects to produce 100 to 200 of the new Class A's initially and is planning to produce and sell 12,000 to 15,000 yearly, once it gets to full production by next summer, according to Jerome Mittman, Ford Division RV sales manager.

Aviator turns to pickups, strikes conversion gold

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WAKARUSA, Ind. — Aviator Conversions is one of the van converters that gravitated toward pickups when van chassis were tight — and struck pay dirt.

This year, with its booming pickup business and a rebound in van chassis availability, the company has signed 200 new dealers and is moving full speed ahead in both segments of its conversion operation.

It plans substantial production increases for van and pickup conversions.

Aviator got its feet wet with large-scale pickup conversions last year when it did a special Winchester promotional truck for GMC. Earlier this year, it began doing a Tony Lama special edition vehicle for Chevrolet.

The Lama pickup, designed under an exclusive licensing agreement with Tony Lama Co. of El Paso, Texas, features the company's logo, graphics and monogram on the interior and exterior, and special interior and exterior trim. It also provides complimentary snakeskin boots to retail customers.

Chevrolet is running a national sweepstakes called Truck 'N Boot through Dec. 31. Two full-sized Lama pickups, plus a variety of Tony Lama lizard, rattlesnake, antelope and cowhide boots and wallets are being given away at Chevy dealerships.

Earlier this year, Aviator had been working with local and regional dealer associations and ad groups, promoting Lama edition pickups at state fairs and agricultural shows.

Larry Laguardia, Aviator vice president and general manager, pointed to the considerable amount of effort involved in putting together such promotional vehicles, often requiring production of a large number of specially tailored vehicles in a short time.

Having done a good job for the ad associations on pickups has helped Aviator sign new dealers for its van conversions.

"We found out that, as a result of our truck programs with GMC and because of the way we handled them and the quality of our product, many of those dealers came back and bought vans from us," LaGuardia said.

It turned out to be an important factor in Aviator's success in signing so many new dealers within such a short time.

LaGuardia credits a large part of the pickup programs' success to the liberal attitude of Utilimaster, its parent company, in allowing it to get into new ventures. Utilimaster not only endorsed the program, but provided considerable engineering and other support work.

Aviator has never sought to be the low-price competitor in the van conversion market. LaGuardia said it seeks to be as competitive as it can, but maintains certain standard requirements that preclude taking production short cuts.

He said he believes Chevrolet's new requirement of adding at least $3,000 of value to a conversion is valid because some manufacturers have been taking short cuts to lower prices, detracting from the quality and longevity of the vehicles in the process.

He said he doesn't mind competing with quality converters and, in fact, likes being on a dealer's lot with other major conversion manufacturers, but he takes exception to "junk that is just sold as a price piece."

The company has moved away from the base van concept for 1989 and put together a "complete van at every price level," from the entry level through high-line models. All its vehicles have a roof rack, running boards, four captain's chairs, and other standard features.

LaGuardia said he believes that simplifies ordering and retailing by eliminating a lot of variables.

Aviator this year is also offering a lot of "quick spec" packages that bring together the most popular options into groups.

Good Times Vans sold

Texas converter now part of Coachmen

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Coachmen Industries Inc. of Elkhart, Ind., has purchased the assets of Bentley Corp.'s Good Times Van in Grandview, Texas.

Aside from creating a more formidable van conversion competitor, the deal was significant because it stemmed largely from GM's consignment pool change.

Bentley's sale of Good Times' assets, including its building and materials, was due primarily to new financial requirements it would have had to fulfill as a large Chevrolet bailment pool account, said Bill Snook, president of Coachmen Vans and newly named president of Good Times Van.

"They (Bentley) needed tremendous credit lines to satisfy the (new) GMAC credit requirement. They would not have been in a comfortable position to do that without other guarantees, letters of credit and guarantees from the owner," Snook said.

The Good Times acquisition roughly doubles Coachmen Van's dollar and unit sales. It also provides some financially beneficial economies of scale, though the two van operations will operate separately.

Good Times and Coachmen Vans, including its Consolidated Leisure Van operation, each did about $20 million in sales during the 1988 model year, Snook said. Coachmen Industries overall is a $400 million company.

Snook is looking for each of the van operations to sell about 2,100 units in the 1989 model year, or 4,200 units in total, up about 20 to 25 percent from last year.

Coachmen is increasing its van conversion capacity in Elkhart by 50 percent this year by moving van campers out of a facility that currently does both van conversions and van campers. It will produce van campers in another facility.

"It's a good growth year for both products. As you can see by our acquisition, we're particularly optimistic about the van conversion outlook," Snook added.

The Good Times acquisition also gives Coachmen some additional advantages.

"There will be some products actually produced down there (Texas)," Snook said. "They are sophisticated ABS plastic producers. They manufacture their own door panels in ABS.

"We should be able to use some of those. We also have better buying power. Both companies buy similar materials."

He added, though, "Our intention is to leave both companies as stand-alone companies. We feel their product was designed in the South for that market. It has been very successful.

"We would like to continue what has been developed by those people. And we will continue up here (Elkhart) our line for the Midwest market. Both will be separate profit centers."

Good Times Van, employing about 150 people, supplies Chevrolet and Ford van conversions, pickup trucks and Suburban conversions throughout the Southwest. The company will retain its established trade name, Good Times. It will operate as a separate subsidiary of Coachmen under the Transcoach Inc. designation.

Gene Stout, executive vice president of Coachmen, said Good Times will not only expand Coachmen's market base into the Southwest and Southern California but also will be its entry into the pickup truck and Suburban conversion business.

"In turn, Coachmen's financial capacity and chassis pools with Chevrolet, Ford, GMC and Dodge will allow Good Times to expand its dealer base and achieve additional growth in the future," Stout added.

Small converter blames politics for loss of Chevrolet business

DEARBORN, Mich. — D.J. Ven Huizen, president of Cypress Van Conversions in Muskegon, Mich., represents many smaller converters who believe the non-bailment segment was treated unfairly in Chevrolet's new program.

Ven Huizen, though, feels the real reason non-pool converters lost out is because they were too quiet and too uninvolved in what was going on to make their case before it was too late.

"The bailment companies had more backing, more money. They were more active in the Recreation Vehicle Industry Association. When the issue with Chevrolet came up, there was no one there to balance out the non-bailment companies' side of the issue," he said.

Underscoring their lack of voice, Ven Huizen said that even though non-pool converters comprise more than half of RVIA membership, they don't have fair representation on any of its major committees.

He said he is the only non-pool converter member of RVIA's custom van conversion committee, for example.

Even more indicative, he said, is the fact that when RVIA's automotive liaison committee had its annual meetings with auto company executives in Dearborn in mid-November, there was not one representative of the non-bailment segment on hand. None are members of the committee.

"The non-pool converters have requested representation on the various RVIA committees that affect our segment of the industry, to no avail," Ven Huizen said.

He believes non-pool companies have repeatedly been "portrayed as the bad guys. In fact, we are entrepreneurs who are responsible for purchasing tens of thousands of chassis per year."

"We have a fierce pride in our units and must serve our smaller customer base," he added, pointing out that small converters have to work harder to keep their dealers and the retail customers happy because they don't have the benefit of a broad distribution system.

Ven Huizen said that Chevrolet pool converters "were successful in eliminating half their competition through politics, not by building a better product."

He said non-pool converters must become more involved in the political side of their business, principally through the RVIA, if they are to survive.

October sales dip 5% in Europe; Fiat clings to '88 lead

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales dipped in October, as much as 12 percent in Europe's largest market, West Germany. It may signal the start of a longer-term decline predicted by some industry executives.

Overall sales in Western Europe were off 5 percent and the West German market slumped 12.7 percent, according to industry estimates compiled by Automotive News.

The German decline enabled Fiat to cling to first place over Volkswagen AG, which has been narrowing the gap in recent months.

Sales in 17 European markets totaled 1,025,700 units in October, compared with 1,079,700 in October 1987.

Analysts attributed part of the decline to booming fourth-quarter sales last year fueled by tax cuts and incentives in France and Germany. The 14.4 percent drop in France's October sales was blamed on a 1987 cut in the value-added tax that sparked extra sales.

In Germany, sales rose in the fourth quarter of 1987 because of the reduction of tax incentives on catalytic-converter-equipped cars that took effect in 1988.

Indeed, not all analysts are convinced that Europe's boom is over.

"I'd like to first see a few more months' results," said Phillips & Drew's Stephen Reitman.

But most industry executives continue to plan for a new-car market in 1989 that is down at least slightly from what promises to be record sales year of close to 13 million units in 1988.

Sales through October totaled 11,045,900, an increase of 4.5 percent over last year's record pace, which resulted in 12.4 million sales.

Fiat Group, including Alfa Romeo and Lancia, has held first place all year. But VW, with Audi and Seat, has rapidly closed the gap in recent months, outselling Fiat by more than 20,000 units in September.

VW outsold Fiat again in October, but by less than 2,000 cars, 158,000 to 156,300, as the Italian market continued to rise. For the year-to-date, Fiat held a slender sales lead of 15,600 cars.

Fiat's 10-month sales of 1,633,700 cars amounted to 14.8 percent of the European market and a volume increase of 7.2 percent. Alfa Romeo, with its new 164 sedan in Italy, has increased sales 13.1 percent, or more than 20,000, units, to 181,500.

VW, Europe's sales leader for the past three years, held 14.6 percent of the market through October with sales of 1,618,100 units, up 2.9 percent.

VW's hottest brand is the Spanish subsidiary Seat, which is up 10.6 percent to 230,200 units. Helped by a boisterous new-car market in Spain and expanding exports, Seat is the only major brand in Europe without an all-new model to achieve a sales gain of at least 10 percent in 1988.

Peugeot S.A., including Peugeot and Citroen, held a 12.7 percent market share through October on sales of 1,403,800 cars. The French group's increase of 12 percent was the best performance among Europe's six big groups. However, October's weak French market, in which the company was down 12 percent, caused its total European sales to decline 3.3 percent.

Ford, which suffered product shortages following its February strike in the United Kingdom, was in fourth-place with sales of 1,263,600 units and an 11.4 percent share. Ford's 14.3 percent decline in October was traced to a 34 percent fall-off in West Germany.

Fifth-place General Motors has boosted share in recent months with better availability of the Corsa small car from Spain. Sales ran flat through the early part of the year, but were now up 3.5 percent to 1,171,700 for the 10-month period. That was despite a 3.9 percent decline in October.

EUROPEAN SALES

Manufacturer	10 months 1988	1988 share*	10 months 1987	Volume Change '88 vs '87
Fiat Group**	1,633,700	14.8	1,524,000	+ 7.2

* Does not add to 100 because of rounding
** Includes Alfa Romeo
*** Peugeot, Citroen, Talbot
**** Opel, Vauxhall, Isuzu, GM-U.S./Canada

Sixth-place Renault was hurt by the weak French market in October and dropped 18.7 percent overall in Europe last month. For the year, it had 9.9 percent of the market with 1,097,900 units, down less than one percentage point.

With its new 5 series, BMW remains the hottest single brand in Europe this year. Sales are up almost 23 percent to 305,300, and it managed to stay even in Germany last month while the rest of the market was off.

Elsewhere, BMW gained 31 percent in the United Kingdom in October, 110 percent in Italy and 23 percent in France.

Mercedes-Benz was down 10 percent in Europe last month as it came under increasing pressure from BMW's 5 series and two-year-old 7 series. Mercedes' 10-month sales were 381,000, up 1.6 percent and good for 3.4 percent of the European market.

Japanese makers continue to avoid political fallout by following overall market growth in 1988. Combined sales for 10 months totaled 1,253,600, an increase of 4.2 percent and a steady 11.2 percent share of the market.

Among national markets, West Germany was down 2.6 percent for the year to 2,379,100. In 1987, it set a record with 2.9 million car sales.

The United Kingdom was up 10.9 percent to 1,974,600 for the 10-month period. It will surpass 2 million units for the second straight year and establish a record. However, sales in October were up only 2.6 percent.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	Jan-Oct. 1988	Change on 1987
West Germany	2,379,100	− 2.6
United Kingdom	1,974,600	+10.9
Italy	1,852,400	+ 8.2
France	1,761,900	+ 3.7
Spain	886,500	+16.3
Netherlands	444,700	−13.1
Belgium-Luxembourg	408,200	+ 4.7
Sweden	280,700	+10.5
Switzerland	275,900	+ 5.3
Austria	222,200	+ 1.0
Portugal	165,900	+64.4
Finland	151,800	+14.8
Denmark	78,800	−27.3
Norway	58,400	−40.2
Ireland	57,300	+12.4
Greece	46,800	+ 8.0
Total	11,045,900	+ 4.5

The Italian market is also approaching 2 million cars. Sales were up 8.2 percent to 1,852,400 for the first 10 months, and volume improved 8.5 percent in October.

France's 14.4 percent decline in October left total sales at 1,761,900 cars for all of 1988, a 3.7 percent gain over 1987 when full-year sales were a record 2 million.

Spanish sales rose 15.7 percent in October, in line with the 10-month growth rate of 16.3 percent. Ten-month sales totaled 886,500 units as Spain stayed on course to go over one million sales for the first year ever.

Your Customers will Love Our Curves!

Curved, automotive glass is a GEM TOP MFG INC exclusive! Now, Rovel® Navajo's and steel GEM TOP's have these standard features:

- Curved dark automotive glass and black frames.
- Curved bay and sliding side windows.
- Conform to curved sides of truck cab.

Ferrari look-alike draws lawyers

Australian company drops Ferrino name, prancing horse logo

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — Plans to launch a Ferrari look-alike in Australia have been altered after attorneys representing the Ferrari importers visited the stand during the recent Sydney Motor Show.

Colin Wilson, a leading Holden dealer, had planned to call his new sports car Ferrino, but after conferring with lawyers the name has been changed to Cerino. Also dropped was the logo, which resembles a prancing horse. The car, however, retains a shape that resembles a Ferrari 308-GTB.

Manufactured in Adelaide, the fiberglass body is fitted with Toyota Celica components, including a 1.6-liter, twin-cam engine. Buyers have a choice between a kit costing about $5,000 ($4,000 U.S.) and a complete, ready-for-the-road car for $22,000 ($18,200 U.S.).

Wilson said he will make at least 30 complete cars annually and as many kits as there are orders for. He said the complete car has been approved under Australia's design rule requirements.

Cerino seats four and has rear-wheel drive and a five-speed manual transmission.

Wilson adopted the styling from Geoff Heard of Creative Cars, who provided the original name, Ferrino. Wilson initially acquired the distribution rights and later took over the project and revamped the coupe to make it a four-seater.

He said Cerino is the first of a number of cars that will be built and marketed by his Warilla Speciality Vehicle Division.

PEDR DAVIS

Ferrino moniker has been dropped, in favor of Cerino

COMING EVENTS

General

Nov. 29-Dec. 2 — National RV Trade Show, Kentucky Fair and Exposition Center, Louisville, Ky.

Nov. 30-Dec. 2 — National Conference on Technical and Skills Training, Indiana Convention Center, Indianapolis, (703) 683-8174

PRODUCTION

Turkey Day slashes car, truck output

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic car and truck production dipped considerably from the prior week's as assembly plants worked only three days due to the Thanksgiving holiday.

Scheduled output of 88,033 cars fell 46.07 percent from the previous week's build of 163,245 and dropped 4.45 percent from the year-ago week's 92,130.

The year-ago week also included the Thanksgiving holiday.

So far this year, 6,436,506 cars have been assembled, 1.19 percent below the 6,513,808 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 51.34 percent; Ford Motor Co., 26.35 percent; Chrysler Motors, 12.04 percent; Honda of America Manufacturing Inc., 4.90 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.27 percent; Nissan Motor Manufacturing Co. U.S.A., 1.40 percent; and New United Motor Manufacturing Inc., 0.70 percent.

Truck output also dropped sharply last week, as the manufacturers scheduled assembly of 51,331, 44.68 percent below the previous week's 92,784 but 2.90 percent more than the year-ago week's 49,886.

Year-to-date, 3,755,663 units have been assembled, 7.20 percent more than the 3,503,467 built last year at this time.

GM closed its Doraville, Ga., plant last week until Dec. 5 due to bloated inventories of the Oldsmobile Cutlass Supreme. The company also closed the Fairfax, Kan., plant, which builds the Pontiac Grand Prix, until Dec. 12.

A GM spokeswoman said Fairfax was shut down because of a parts shortage. The closure of the two plants will idle 7,600 workers.

GM's Reatta Craft Centre in Lansing, Mich., resumed work today after a two-week shutdown to prepare the body shop for convertible output and to make paint shop changes.

Ford has scheduled overtime next Saturday at Lorain, Ohio; Wixom, Mich.; Wayne, Mich.; Kansas City, Mo.; Norfolk, Va.; and Louisville, Ky.

All car and truck plants were closed last Thursday and Friday for the holiday.

No holiday; Canada steady

Last week's scheduled Canadian auto output totaled 17,527 cars, 1.18 percent below the previous week's 17,737 and 22.75 percent below the year-ago week's 22,690.

So far this year, 955,571 cars have been assembled, 31.57 percent more than the 726,261 completed last year at this point.

Truck output was slated at 20,703 units last week, 5.24 percent fewer than the the 21,848 built in the previous week but 14.92 percent more than the 18,015 assembled in the year-ago week.

Year-to-date, 851,082 trucks have been built, 13.25 percent more than the 751,532 assembled last year at this time.

Mall fight a warning for Saturn

Tennessee refuses added dealer site

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A two-year-old fight between a Memphis Oldsmobile dealer and the Tennessee Motor Vehicle Commission over the dealer's expansion plans may soon escalate into a string of lawsuits.

It also may sound the opening salvos of impending legal battles in several states around the South for General Motors' Saturn Corp. project and other franchises searching for new sales outlets in shopping malls or satellite locations.

Martin Pryor, president of Pryor Oldsmobile in Memphis, has attempted since 1986 to win the Tennessee Motor Vehicle Commission's approval of a plan to open a minidealership in a local shopping mall. The state body has vetoed his plan twice — the second time in defiance of a chancery court decision in his favor — and, according to Pryor, he is now being advised by attorneys to sue the 12 members of the commission individually.

The commission, which is composed of eight auto retailers from around the state and four consumer representatives, maintains that Pryor's plan constitutes a request for a new dealership license. Under Tennessee law, dealerships must be physically separate from other businesses and must consist of a full sales, service and parts facility.

Pryor's proposed mall dealership would use a store location in The Mall of Memphis as a showroom

Trotman, left, and Lataif: Ford of Europe's strategists are taking at least a cursory look at several product niches, including the minicar segment beneath the Fiesta

Ford Europe wants minivan

May team with parent, go it alone or try joint deal

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

WARLEY, England — Ford of Europe may team up with Ford's North American automotive operations to develop a minivan for the European market.

Ford of Europe is anxious to fill what is seen as an expanding niche in Europe. It would look first to the United States for product help and likely opt for a version of its next-generation minivan rather than import and re-badge the current Aerostar in large volume, according to Ford of Europe President Louis Lataif.

Failing that, it might develop its own minivan or develop one in cooperation with another manufacturer in Europe, Lataif said.

In a joint interview, Lataif and Ford of Europe Chairman Alex Trotman said the company's European strategists are taking at least a cursory look at several product niches, including the minicar segment beneath the Fiesta.

Such a car could be produced in Europe in association with another carmaker, though "we're not staying up all night worrying about the sub-B car," Trotman said.

"We stay up at night worrying about the minivan a little," Lataif said.

Industry analysts view the small van segment as a growing one in Europe. Renault has never been able to supply enough of its low-volume, Matra-built Espace van, and Chrysler Corp. is now importing its North American-built Voyager.

Fiat, General Motors and Volkswagen are all reputedly working on European minivan projects. Fiat is thought to be developing an Alfa Romeo small van on a Tipo platform and considering selling Chrysler's Voyager with a smaller engine in Italy. GM is studying a Kadett-based, high-roof vehicle that would be produced in Brazil, and VW is reportedly examining small-van concepts based on the next-generation Golf or Passat.

Talk of Ford-VW cooperation on a VW-designed minivan using a Passat floorpan has circulated for months. There is no evidence, however, the project has advanced to approval stage.

Ford charts radical path in truck field

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has on its drawing board a radical approach to developing light trucks that could result in most of Ford's lineup being built off a common, "flexible" platform within the next decade.

Industry sources familiar with Ford's plans say the project, if carried to its potential, would be staggering in scope and quite possibly a landmark in auto history.

However, Ford is said to have reached a point where it is closely scrutinizing the cost of the program. The company could scale back plans or blend them with conventional approaches if ambitions prove too costly to implement, sources said.

A separate team has been assigned to manage the program and is sharing information with existing truck engineering staffs. The goal, said one Ford insider, "is to make this thing the best vehicle in the world."

At its heart is a platform that can be adapted to fit two wheelbases — 114 inches and 126 inches. The width could also be adjusted to allow the platform to carry a range of distinct products. In the process, Ford would expect to gain strategic advantages through engineering and manufacturing flexibility.

"If it works, it would be the singularly most important concept of the rest of the century," said William Pochiluk, president of Autofacts Inc., a consulting firm in Paoli, Pa.

Products slated to be replaced under the program include the Aerostar minivan, F-150 pickups, full-sized Bronco sport-utility and the Ranger compact pickup. Also in the plans are an intermediate-sized pickup. It is believed other products could also be spun off to fill special niches.

While the program is known by the code name PN38, each model is being designated internally by a sequence of three letters followed by the number 38.

One of the first models is expected to be the next-generation Aerostar, which has been targeted for debut around 1993 or 1994. Other entries would follow during a span of about five years.

Suppliers said they expect delays, however, because of the scope of the project, potential hurdles with technology, and the length of time between now and pro-

Al Febbo is guiding GE's marketing push to attract more automotive business

Giant GE trains its might on host of auto activities

By Charles M. Thomas
and David Versical
AUTOMOTIVE NEWS STAFF REPORTERS

General Electric, the high-rolling corporate powerhouse that seems to continually shuffle its portfolio of businesses in pursuit of hot markets, is stalking the auto industry.

And if GE brings the same relentless commitment to automotive that it has to other ventures, its rivals had better beware. For in an industry known for its almost glacial sluggishness, GE plays with a distinctly different style.

Since Chairman Jack Welch took over nearly eight years ago, GE has shed hundreds of mature or low-margin operations in favor of scores of others with greater profit potential, particularly in technology and services.

Under Welch, GE has percolated an odd brew of unlikely business entities that includes broadcasting giant NBC and brokerage house Kidder Peabody & Co. It is a dominant force in global medical systems and jet engines.

Now it has launched an aggressive, multi-layered blitz on the auto industry. Its auto-related activities include: fleet leasing; direct customer leasing in a joint program with American Express; auto

Senate boss is tough foe on clean air

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Senate Democrats last week chose a leader who has a reputation for being uncooperative toward the auto industry on environmental issues. Nonetheless, the car companies are optimistic about working relations.

New Senate majority leader George Mitchell, D-Maine, has been a prime mover behind clean-air legislation in Congress, and the stringent new controls he wants on tailpipe emissions have been fought tooth and nail by the automakers for several years.

Now that Mitchell has the top party post in the Senate, automakers are bracing for a battle in 1989. Although Mitchell is a self-described liberal Democrat, environmental specialists for the auto industry say he may work well with President-elect George Bush.

Bush has indicated that, as president, he will place a high priority on environmental matters and is especially anxious to find a cure for acid rain.

A Ford Motor Co. spokesman said, "Mitchell was the obvious choice of the Democratic majority in the Senate. We look forward to working with him as closely as he desires."

General Motors' Washington office had no official comment, but expressed hope for clean-air legislation that will not weaken the American automobile industry.

Robert G. Liberatore, Chrysler Corp. director of public policy, said, "Chrysler feels Senator Mitchell can make a real contribution to the public policy process."

Liberatore was staff director for the Democratic Policy Committee before joining Chrysler in 1985.

"Mitchell is a liberal, but I wouldn't say he is anti-business," Liberatore said. "I think he will be relatively aggressive on issues like child care, mandatory health insurance and the minimum wage, but he is a reasonable man. He has an open mind on trade and that has great appeal to us."

The National Automobile Dealers Association is particularly concerned about the mandated benefits issues mentioned by Liberatore because of the financial impact they would have on car dealers. Like the automakers, however, NADA believes it can work well with the new majority leader.

AMAIZING: *Saturn's 1st born is field of corn*

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — The factory walls are still going up at Saturn Corp.'s massive plant, but one thing is already clear: Cars aside, the operation has a heck of a future in crop management.

About 500 acres of the Saturn site were planted with corn this year. Since the summer drought wiped out more than a third of the Iowa/Illinois corn crop, the national supply was down, prices were up and General Motors was on the spot.

Saturn-employed farmers harvested some 20,000 bushels of corn — all of it snapped up by one dairy farmer in Alabama.

The drought cut GM's yield from last year, but not the price. Corn prices in 1987 hovered in the range of $1.65-$1.75 a bushel. A bushel this year fetched about $3.15, representing an 80 percent increase in gross margins. Saturn's proceeds from the venture: $63,000.

Had the entire 2,450-acre tract been planted, the corn raiser/carmaker might have earned about $300,000.

The company also has 400 acres under winter wheat, 180 acres under barley and almost 400 acres under soybeans. Soybean prices, incidentally, are up 75 percent compared with last year. Imagine boosting Grand Am prices 75 percent.

Ed Killgore, Saturn's manager of site facility, said the farming operation is primarily a function of land maintenance.

"We want to keep the land the way we found it," he said. "That means more than having a bunch of industrial buildings on it. We want to blend into the neighborhood.

"It's definitely good land," Killgore added. "We made out pretty good."

Easy credit hikes GMAC, Ford repos

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Easy credit intended to sell more cars and trucks has inflated loan delinquency and repossession rates at the captive finance arms of General Motors and Ford Motor Co.

A new study released here by the American Bankers Association shows that General Motors Acceptance Corp. and Ford Motor Credit Co. — at one time among the most conservative lenders in the United States — now have higher — and worsening — repossession and delinquency rates than do commercial banks on comparable loans.

GMAC's repossession rate rose to 2.1 percent during the first nine months of this year from 1.7 percent during the same period a year earlier. Ford declined to release quarterly figures, but the No. 2 carmaker said the rate was troublesome enough that Ford stepped up collections, cracking down on customers with late payments in an attempt to reduce the repo rate.

In comparison, the American Bankers Association survey showed that commercial banks had a third-quarter 1.2 repossession rate on loans made directly to retail customers and a 1.9 repossession rate on indirect loans made through new-car dealers.

Both quarterly figures were up from the prior quarter and the corresponding year-ago period, but remained lower than the GMAC rate.

Another indicator of potential losses is delinquencies. GMAC's delinquent loan rate, payments that are at least 31 days overdue, was 2 percent for the first nine months, compared with 1.9 percent during 1987.

Although the American Bankers Association survey rates are based on per-1,000 loans and the GMAC rates are stated as a percent of outstanding loans, the bankers' group and GMAC agree the rates are comparable.

Ford Credit's late loans were also on the upswing during the first nine months, although the finance unit refused to release specific data.

The increase in problem loans — although a seemingly small shift of a few percentage points — also has sent earnings plummeting and has made both giant financial institutions seriously re-examine their lending practices.

Both GMAC and Ford Credit now admit that in their zeal to attract new buyers, especially students and customers with questionable credit ratings, they may have loosened credit standards too much.

"We made some bad loans, it's easy to see in the long term," said Don Cook, executive vice president of Ford Credit. "But we can see the trends and we can do something about it."

But there's little that either company can do to reduce the percentage of higher-risk loans already on the books. And ultimately, GM and Ford dealers who use the captive finance arms will feel the pinch.

About 30 percent of Ford Credit's loans are with recourse, Cook said. A recourse loan provides that the dealer shares the risk and forfeits a portion of his profit for arranging the loan — typically more than for a non-recourse loan — if it goes bad. GM said 21 percent of its loans are with recourse.

The consequences of easier credit are only beginning to show up. Banking experts said it takes at least 15 to 24 months for an average car loan to go bad. Now, nearly two years after credit requirements were eased in late 1986, both GMAC's and Ford Credit's late payment rates and repossessions are up.

The most dramatic barometer of bad loans is repossessions. Taking back a car is considered a last resort by the captive financial institutions because of the ill will that is created by a repossession. GMAC often attempts to work out extended credit payments and change the terms of a loan to avoid a repossession, said a GMAC spokesman.

But while GM and Ford delinquency rates were up for the first nine months, the percentage of late payments on bank car loans dropped, according to a survey by the American Bankers Association.

Late direct car loans fell to 1.77 percent in the third quarter from 1.89 percent three months earlier, and delinquent indirect loans decreased to 2.31 percent from 2.33 percent in the second quarter.

So what happened at GMAC and Ford Credit? The companies say they changed credit policies to go after new customers and, ultimately, to help their dealers sell more cars.

see REPOS, page 43

Big truck makers expect price hikes to stick

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Strong sales and inflation give heavy-truck manufacturers a greater opportunity and more incentive to make their first real price increase in several years stick.

Manufacturers have boosted prices an average of 3 to 3.5 percent for the 1989 model year. Such an increase would hardly raise an eyebrow in most industries, but it is big news for the cutthroat Class 8 market.

For several years, heavy-truck manufacturers have attempted to raise prices at the start of each model year — but quickly undercut them with huge price concessions when the bidding battle for retail orders got under way.

There has been practically no bottom to manufacturers' price-cutting, some dealers said.

As Owen Hildreth, owner of Owens International, a South Holland, Ill., Navistar dealership pointed out, prices were determined on a deal-by-deal basis. The bottom was determined when the hungriest manufacturer sewed up the deal.

Added Joseph Rossetti, executive vice president of sales and marketing for Mack Trucks, "Every deal stands on its own today. There is no consistency in pricing strategies. There is still a lot of discounting. To raise the book price is one thing. To collect it is another."

But this time around, Rossetti and other industry officials are optimistic about making a 3 to 3.5 percent price increase stick.

The industry is under pressure from several years of cost absorption and from recent dramatic increases in the cost of such basic materials as steel and aluminum and componentry. In October, for example, Cummins and Caterpillar, which supply nearly 80 percent of the Class 8 market's engines, both raised their prices nearly 3 percent.

Larry Oliphant, Volvo GM Heavy Truck vice president of sales and marketing, said "it nets down to just what the market will bear

'89 price ladder: $4,349 to $205,500

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

New-car buyers in the United States can select 1989 autos ranging from a Yugo hatchback at $4,349 to a Rolls-Royce Corniche II convertible at $205,500.

In between are some 600 imported and domestic models, nearly all of them a lot closer to the made-for-misers Yugo than to the made-for-millionaires Rolls ragtop.

Looking at domestic cars alone, the spread is considerably narrower. The 1989 price leaders among the U.S.-built models are the Dodge Omni America/Plymouth Horizon America five-door hatchbacks at $6,595. At the top of the list is the Cadillac Allante convertible at $57,183, fol-

Mid-month sales dip 7%; fewer selling days

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Mid-November sales of U.S.-built cars fell 81 percent below last year's comparable 10-day period, although the daily selling rate inched up 3.72 percent this year.

The mid-month sales total was only slightly behind (4.05 percent) the Nov. 1-10 domestic 10-day delivery figure, when the Big 3 launched a plethora of attractive incentives.

All four transplant automakers reported 10-day gains while the Big 3 shared losses in November's second 10-day period.

There were 159,082 domestic cars sold Nov. 11-20 compared with 172,552 a year ago. However, there were eight selling days this year and nine in 1987. The daily selling rate was 19,885 or 713 units higher than last year's 19,172.

In the second 10 days of November, Nissan delivered 29.50 percent more U.S.-made cars than it did last year. Honda's transplant sales rose 23.73 percent.

Mazda's sales quadrupled this year — to 675 from 163. It started reporting sales of cars built at its Flat Rock, Mich., plant last November.

Toyota sold 1.26 more transplant cars than it did a year ago.

Although General Motors delivered 5.38 percent fewer cars in the period this year, Oldsmobile's sales were slightly stronger and Pontiac's sales were off only about 200 units from last year's mid-November period.

Ford Motor Co. sales dropped 12.84 percent in mid-November. Mercury sales slumped 21.99 percent.

Chrysler Motors sold 13.41 percent fewer domestic cars. Dodge deliveries rose slightly.

Mid-November light-truck and car sales declined 8.05 percent to 261,075 units compared with 283,928 last year. Nissan was the only car-truck maker to report a gain, and that resulted from its car sales increase; trucks were down.

Domestic light-truck sales in the second 10 days of November were off 8.42 percent from last year. The four U.S. light-truck producers delivered 101,993 units Nov. 11-20 compared with 111,376 a year ago.

Chrysler sold 11.49 percent fewer trucks in the period. Ford's truck sales were down 9.36 percent and GM sold 5.76 percent fewer light trucks. Nissan reported its transplant light-truck sales were off 4.56 percent.

Former exec of AMC buys design firm

TROY, Mich. — A group led by John Mowrey, former American Motors vice president of supply and sourcing, has purchased Time Engineering, ranked by Crain's Detroit Business as the 13th largest automotive engineering firm in the Detroit area.

The 31-year-old firm is involved in product design and engineering and robotic application systems. Time Engineering has 400 employees and reported revenues of $18.5 million in 1987, down from $26 million in 1986.

The group purchased Time Engineering from Edac Technologies Corp. Mowrey will initially own 70 percent of the company but has an option to purchase the remaining 30 percent later.

Mowrey, who is president and chief executive officer of Time, said he plans to expand Time's automotive and non-automotive business.

Study to focus on auto women

ANN ARBOR, Mich. — The Office for the Study of Automotive Transportation at the University of Michigan's Transportation Research Institute is undertaking a study of professional women employed by the Big 3 automakers and the U.S. offices of Toyota, Honda, Mazda and Nissan.

The study will identify a profile of the women in managerial positions in the automotive industry. Through questionnaires and interviews, it will attempt to discover what the women's primary issues, concerns and agendas are and their perception of how they are faring in the industry.

In keeping with institute policy, all company and individual names will be confidential.

Women who want to be part of the target group should write: Office for the Study of Automotive Transportation, 2901 Baxter Road, Ann Arbor, MI 48109-2050, or call (313) 764-5592.

Ford gives college $2,500 for field trips

ST. LOUIS — Ford Motor Co. has donated $2,500 to Washington University's field science program.

The money will help provide trips to the university's Tyson Research Center for elementary and high school classes.

SOME LIGHTING SYSTEMS JUST LIGHT UP YOUR LOT.

ELSCO SELLS YOUR PRODUCT!

Let's face facts. A well lit merchandise area is a must when it comes to selling automobiles. If it looks good it sells! That's why it's important to have Elsco's Auto King VI lighting on your lot.

Energy efficient and cost-effective, Auto King VI operational characteristics contribute to greater profitability with performance second to none.

Whether you're building a new location or retrofitting an existing one, you'll see why Auto King VI is setting the standards for quality, performance, efficiency, and design.

To learn more about the amazing Auto King VI call or write Elsco Lighting Products, Inc.

Manufacturing plants in Stockton, California; Mississauga, Canada; and Hong Kong. Offices in all principal cities.

PRODUCTION

Car output hits 163,622 after holiday

By Karen Detkowski
SPECIAL CORRESPONDENT

Last week's targeted domestic auto production totaled 163,622 units, 82.50 percent above the Thanksgiving week's 89,654 and 6.31 percent above the year-ago week's 153,907.

Companies split last week's estimated output as follows: General Motors, 46.61 percent; Ford Motor Co., 25.86 percent; Chrysler Motors, 17.60 percent; Honda of America Manufacturing Inc., 4.47 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.96 percent; Nissan Motor Manufacturing Co., U.S.A., 1.26 percent; and New United Motor Manufacturing Inc., 1.24 percent.

Truck output was estimated at 96,823 units last week, 87.29 percent above the holiday week's 51,696 and 13.90 percent above the year-ago week's 85,007.

GM's Doraville, Ga., plant resumed output of the Oldsmobile Cutlass Supreme today. The Fairfax, Kan., plant remains closed and is scheduled to resume production of the Pontiac Grand Prix next week. Both plants were closed because of parts shortages.

GM slated overtime last Saturday at its Lansing, Mich., (Pontiac Grand Am) plant. Friday overtime was scheduled last week at the Janesville, Wis., plant for both car and truck assembly lines, which are on a 10-hour/4-day schedule.

Also slated for Saturday overtime last week were the following GM truck assembly plants: Baltimore; Pontiac, Mich., East and West; Shreveport, La.; and Moraine, Ohio.

GM's Lordstown, Ohio, truck plant closed Nov. 21 to change the paint system. It will return Jan. 3.

Daily overtime is scheduled at all Ford assembly plants this week.

Ford slated Saturday overtime last week at its Wixom, Mich., car plant and five truck plants: Kansas City, Mo.; Norfolk, Va.; Lorain, Ohio; Louisville, Ky.; and Wayne, Mich.

Saturday overtime is scheduled at Ford's Twin Cities, Minn., and Lorain truck plants this week.

Chrysler's Kenosha, Wis., plant resumed output last week after a break for hunting season.

The Kenosha plant will close Dec. 23. It assembles the Plymouth Gran Fury and Horizon, Chrysler Fifth Avenue and Dodge Diplomat and Omni. The Omni and Horizon will be moved to the Detroit Jefferson plant in January. Gran Fury, Diplomat and Fifth Avenue will be dropped.

Canadian cars edge upward

Canadian auto production was scheduled at 17,853 units last week, slightly above the prior week's 17,710 but 11.77 percent below the year-ago week's 20,234.

Estimated truck output of 20,654 units last week was 1.36 percent below the prior week's 20,939.

General Motors' Oshawa (No. 2) plant remains closed for model changeover. The plant is expected to resume production Jan. 3.

Navistar's Chatham, Ontario, plant remains closed until Dec. 12.

Industry predicting softer '89

Global makers eye new markets

Overseas auto industry executives, while seeing a softening in the global auto market in 1989, are generally optimistic on the prospects for their individual companies in the years ahead.

While satisfied with the performance in their home markets, they are also sniffing out new opportunities in emerging markets and are keeping a keen eye on Europe as it heads toward market unification in 1992.

That overview comes from a series of exclusive interviews with top automotive executives around the globe.

Participating in the Overseas Focus section that begins on page 29 are Ford of Europe Chairman Alex Trotman and President Louis Lataif; Toshihiro Tajima, president of Fuji Heavy Industries; Xavier Karcher, chief executive of Automobiles Citroen; Burkhard Welkener, commercial executive director and deputy managing director of Shanghai Volkswagen; Tadashi Kume, president of Honda Motor Co.; John Smith, executive vice president of GM overseas operations; and Toyoo Tate, president of Mitsubishi Motors Corp.

While focused on competition within their home markets, many makers are increasing their dependence on exports and transplant operations.

Honda, for instance, is counting on its U.S. assembly operations in Ohio as a base for exports of some product to non-North American markets.

GM is counting on Europe for more exports and sees opportunities for an increased market presence in Taiwan, Japan and South America.

Mitsubishi is relying on its recent public offering to fund new products, recruit new talent and strengthen its position as a supplier to local automakers in Southeast Asia.

Fuji Heavy Industries is looking to France as a site for vehicle production, and is hopeful that its tie-up with Isuzu for joint production in the United States will lead to future projects between the two.

Meanwhile, China is set to grant one of three automakers there a contract to construct and operate a 300,000-unit assembly plant as the first step in the country's goal to produce a million units annually by the end of the century.

But the big prize remains Europe. Despite predictions of a slight downturn in sales next year, European demand is for more than 12 million cars per year.

World sales dip in '89

Study forecasts declines in big markets

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Worldwide new-car sales will fall in 1989 as Europe and Japan suffer their first declines since 1984 and the United States market slips from this year's level.

In its World Automotive Forecast Report, the London-based DRI-Europe research group projects world car demand at 33.09 million units in 1989, down 3.5 percent from the record 34.28 million projected for 1988.

DRI-Europe forecasts that in 1990, the world market will recover 1.2 percent to 33.49 million car sales, based on renewed growth in Europe and Japan.

Other economists and automotive analysts said last week that they, too, look for a softer year ahead in the United States, although most predicted the market will not bottom until 1990.

World demand this year is expected to rise by 5.0 percent from 1987 levels as auto markets in all major regions of the world grow. But next year's decline in the three main market areas — the United States, Europe and Japan, will offset continued growth in Latin

Rebate snafu leaves GMC buyers waiting

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

GMC truck buyers are waiting up to five months to get payments from a summer ad campaign that promised them $300 on S-15 pickups and Jimmys and $500 on new Sierras.

GMC is mum on the number of customers who are still waiting for their GMC Truck Cash Back Bonus payments, but a company spokesman conceded the campaign was so popular that it caused the company more than a few headaches.

The bill to GMC could reach into the millions of dollars, however. GMC reported sales of more than 45,000 units for the three vehicles from May 23 to July 31 — the period specified by various ads as the time during which delivery must have been taken to be eligible for the factory-direct rebates. If GMC were forced to pay rebates on all those vehicles, the cost would surpass $17 million.

The ads did not specify a date by which a customer must request the rebates; however, a recorded message now playing when a person calls an 800 telephone number listed on the ads tells customers that the promotion expired Aug. 21. It tells callers to dial a second telephone number if they are having difficulty receiving their bonuses.

The ads also gave an address in Clifton, N.J., to which customers could write for the rebate certificate.

Clifton Postmaster Joseph M. Gondola said the box was rented by LCS Industries in Clifton and terminated Oct. 11 without a forwarding address. Any letters arriving at the post office box after Oct. 11 have been returned to sender or put in the dead letter file, he said.

LCS was the firm hired to administer the program.

Part of the delay in issuing rebate checks involves an investigation into which customers are entitled to bonus checks because some dealers reported the trucks sold on the wrong dates.

"There were questions about trucks and dealer manipulation of data," said Ed Bachman, division president — lead fulfillment at LCS. "Dealers may or may not have entered a sale in a given month or registered information properly."

New York-based McCann-Erickson, GMC's advertising agency, deferred questions on the promotion to its client.

McCann-Erickson also declined to say how many buyers applied for the bonus certificate from LCS or how many buyers have failed to receive their checks.

"There are delays that are no way the fault of GMC dealers," said a GMC spokesman.

The promotion has been troubled for several months due to the huge response by customers, he said.

"An outside firm was administering the program, and the response was triple to quadruple what was anticipated," the GMC spokesman said. "As a consequence, there were unforeseen problems administering it."

Customers called the toll-free number or wrote to the box num-

Soviets sign pact to export to U.S.

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Amid the hoopla surrounding last week's summit meeting between President Reagan and Soviet Premiere Mikhail Gorbachev, a Soviet trade show opened showing two vehicles that may someday be sold in the United States.

And the first vehicle contract between the two countries was signed sending 25 Soviet-built mining trucks to a U.S.-based distributor.

Gorbachev was scheduled to open the Soviet Export Goods Exhibition but cut short his visit due to the disastrous earthquake in Soviet Armenia. The trade show and truck contract signing between New York-based Global Technology Group and the Soviets had been moved up a week to coincide with the summit.

NEWSPAPER

U.S. vehicle sales rise 7% in Nov.

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

U.S. car and light-truck manufacturers finished November with a strong sales performance and a 7.21 percent gain over last year.

Combined U.S.- and import-car sales rose 8.02 percent ahead of last November, overshadowing U.S. and import light-truck gains of 5.54 percent above November 1987. The seven U.S. automakers reported a 13.60 percent surge in domestic-car sales, offsetting a 2.99 percent decline in import-car sales for the month.

Stepped-up incentives, restyled 1989-model cars and trucks, and fresh advertising and marketing programs were among factors that led to the November sales upswing.

"I think we will begin to see more new incentives and more trimming of production schedules. Ford just sent out a sheet that showed about 70 percent of its products had incentives. They seem to be matching GM's incentives with cash rebates," said David Healy, analyst, Drexel Burnham Lambert, New York.

Another auto analyst, Ted Sullivan, Wharton Economics, Bala Cynwyd, Pa., said the market will continue to heat up with incentives. But he cautioned: "We have recalculated our forecasts and have sales dropping. Except for the last 10-day rates, we think they will continue to worsen." He predicted, however, that gradually rising incentives will put a floor on how much sales will drop.

Commenting on the need for incentives, Ford Motor Co. analyst Ray Windecker said incentives have "virtually become a way of life."

"My only concern is in regard to the emotional impact of questions like: Are the auto manufacturers being too ambitious? Will there be a slowdown? Technically, there is no bad news yet," Windecker said.

This year, November's combined car and light-truck sales of 1,166,806 surpassed last year's total of 1,088,353 by 78,453 units.

Domestic carmakers delivered 552,049 cars, up from 485,968 in 1987. General Motors was a top performer for the month, although

Young represents the all-important "voice of the consumer"

GM's image architect

Young molds identity for each car family

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' car-making divisions have begun to clarify their brand identities and further differentiation among the divisions is expected to come from new products in the 1990s.

But, the architect of GM's brand equity plan stresses that all GM divisions must concentrate on differentiating core products first, rather than trying to develop exclusive, image-type vehicles to make a statement about the division.

Shirley Young, GM's new vice president of consumer market development, is in charge of the plan to determine and build upon the unique identity of each division.

"There has to be a clarity of vision and an organization of understanding; they (the divisions) have gone to that level of understanding," said Young, an articulate, Shanghai-born New Yorker.

She represents the all-important "voice of the consumer" in GM's four-phase product development program and reports directly to GM's executive committee.

Young should know. She arrived at GM five years ago to help the corporation sort out its branding problems at a time when Cadillacs didn't look like Cadillacs and consumers saw little difference between an Oldsmobile and a Buick.

It was Young who proposed in 1986 a brand equity program by which each division would search its roots for a identity. GM's executive committee listened to her and later Young's plan became the basis on which all future products were based.

In June, GM hired her as their vice president of consumer market development, a new position. Instead of spending one day a week at GM as a consultant, Young is a full-time employee.

Young also works on special marketing projects for the divisions, including brand positioning, and helps the corporation in price marketing, including promoting option packages.

Since her 1986 brand equity presentation, Young has seen her vision pay off. She points to Buick as one example of how the idea has worked. Buick, according to Young, had a difficult time finding a position relative to the other divisions.

"It said 'I'm not going to be the most expensive or the most exciting, I'm not going to be the standard of the world,'" said Young, noting Buick's product lineup at that time ranged from "hot" looking Grand Nationals to conservatively styled Rivieras.

Buick went back to its roots to find its premium American road car image, a position Young calls "a courageous and correct position" for Buick.

"They captured something less

Big 3 abandoning ESOP programs

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Nearly 800,000 salaried and hourly U.S. auto workers will lose their Employee Stock Ownership Plans (ESOP) established under the 1975 Tax Reduction Act next year when the Big 3 terminate the programs.

The stock plans are being disolved because the federal government has phased out ESOP tax advantages for corporations.

"The federal government, through changes in the tax laws, has made ESOPs obsolete as an employee benefit," said a General Motors spokesman.

Automakers have notified employees of plans to halt the ESOPs and will ask them to decide among several options, including cash payouts or rolling their shares into other employee stock programs.

In a letter to employees last week, GM cited repeal of several provisions for payroll tax credits in the Tax Reform Act of 1986 as the reason for halting the program.

By terminating the program in 1989, employees who take cash payouts will be exempt from a 10 percent additional tax on distributions. The companies said the number of shares due each employee differs due to length of employment and other factors, so it is difficult to compute an average.

"We recognized that it had to happen due to the tax law changes and asked the companies to do it at the most advantageous time for employees, and it appears that they have," said a UAW spokesman.

A GM spokesman said 544,000 workers will be affected by termination of the ESOP. The automaker announced Friday that employees will receive roughly $51 million in cash dividends based on current holdings of $877 million in GM common stock purchased for them by the company. There is just under 12 million shares of GM stocks in the ESOP.

Following the distribution of ESOP assets next year, GM officials say that payouts and cash dividends to hourly and salaried workers will probably exceed $1 billion.

Ford Motor Co.'s ESOP has current holdings of $800 million on 16 million shares, with a distribution to employees set for the second quarter of 1989. A company spokesman said 171,000 employees will be affected. Ford will distribute $36 million in dividends to employees this month.

Chrysler Corp. said 96,000 employees will be affected. A spokesman said the ESOP has holdings of roughly $100 million on 3.8 million shares in its ESOP. Chrysler will distribute $3.8 million in dividends to employees this month.

ESOPs were originally encouraged under tax laws to foster employee stock ownership. Companies received tax benefits for establishing them.

Established in 1975 for salaried employees and in 1979 for hourly employees, company contributions were funded through tax credits, which most recently amounted to one-half percent of each employee's earnings. These payroll tax credits were repealed in 1986.

More recently, ESOPs have been established by many companies to place huge blocks of stock into friendly hands to avoid takeover efforts by raiders.

All three automakers have other employee stock programs into which employees can roll over their ESOP stock.

Corrections

A headline in the Dec. 5 edition of Automotive News incorrectly said that the confidentiality pact signed by Ford Motor Co. and the Soviet Union was believed to call for Scorpio production in the Soviet Union. Although the parties are working toward that goal, the pact actually covered only the exchange of technical information between the parties.

A story in the Nov. 21 edition incorrectly stated that the Tucker automobile featured a hydraulic torque converter that transmitted power directly to the wheels. While the original plans for the car called for such a device, the finished Tucker featured a transmission based on a Cord.

Reuss: Enough capacity for Oldsmobile truck

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will allow Oldsmobile to sell a version of an upcoming four-door sport-utility vehicle or an all-purpose van only if it represents plus business for the automaker.

Reuss

Lloyd Reuss, GM executive vice president in charge of North American Automotive Operations, said no decision has been made concerning Oldsmobile selling a truck-type vehicle.

GM is considering a variety of truck-type vehicles to be sold through Oldsmobile, but those receiving the most serious consideration are a version of the four-door Chevrolet S-10 Blazer/GMC S-15 Jimmy and a version of the Chevrolet Lumina/Pontiac Trans Sport APV, a plastic-bodied passenger van based on the A-car platform. A four-door Blazer/Jimmy is due in the 1991 model year; the APV goes into production as a 1990 model in the spring of 1989.

Under the Oldsmobile proposal, the vehicles wouldn't change substantially. They would be renamed and badged as Oldsmobiles and interiors would be upgraded to fit Oldsmobile's upscale image.

When Chevrolet and GMC dealers discovered that GM executives were considering the proposal, they launched a massive letter-writing campaign in opposition. They do not want Oldsmobile dealers to compete against their own truck lineups.

Speaking to the Detroit Auto Writers Group last week, Reuss said GM received so many letters he quit counting just how many.

He said that some of the letters contained erroneous assumptions by dealers. For one, many of the letters assumed that a product was being taken away from GMC and Chevrolet dealers, he said. Instead, a four-door sport utility — an addition to the current line — for example, would go to GMC and Chevrolet dealers as well as Oldsmobile dealers.

Some dealers were concerned that GM does not have the capacity to meet the needs of Chevrolet and GMC dealers and that including Oldsmobile would cause further availability problems. Reuss said GM has capacity plans not known to dealers, although he did not detail those plans. GMC and Chevrolet dealers will receive all of the vehicles they can sell, he said.

Regarding other truck plans, Reuss said GM is considering a plan to build its next-generation full-size van, now built on the G-body platform, on the C/K full-size pickup truck platform.

GM already has said it will build the next-generation full-size Blazer and Suburban based on the C/K platform. Reuss said a decision as to where those models will be built will be made in the first quarter of 1989. The competition is between GM plants in Flint, Mich., and Janesville, Wis.

Reuss said GM cannot, however, build its smaller sport-utility vehicles and trucks from the C/K platform. Those models, the S-10/S-15 Chevy Blazer and GMC Jimmy, will stay on the S-body platform. Ford Motor Co. is currently studying whether it can build both compact and full-size trucks from a single base, which would be stretched or widened to fit the various products.

Reuss also said that GM will introduce a commercial version of its APV. The Chevrolet and Pontiac APVs will be unveiled at the North American International Auto Show in Detroit next month.

Mack's new CH600 part of 5-year development program

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

ALLENTOWN, Pa. — Mack Trucks' $500 million capital expenditure program has yielded a new series, the CH600.

John B. Curcio, Mack's chairman of the board and chief executive officer, said the line would be followed next year with a new, 12-liter engine, then with a new version of the "Baby 8" CM400 series and, finally, by a new low-entry-cab model.

Mack will complete its model updating program in 1992.

Meanwhile, the company also has invested more than $100 million in modernizing its powertrain plant in Hagerstown, Md.

Curcio said the Dec. 1 introduction of the CH600 capped a five-year, $60 million design and development effort. The CH600 replaces the R model and is built at Winnsboro, S.C.

The plant, the subject of an organizing dispute between Mack and the UAW, uses the latest in technological innovations such as bar coding, laser scanning and automated storage and delivery.

Mack closed its Allentown plant last year after deciding it couldn't be updated cost-effectively.

T.L. Warmkessel, director of marketing product planning, said the CH600 represented the first time any truck manufacturer has developed a plant and a product for each other.

Company officials said the Winnsboro plant is building a total of 72 R, CH and DM model trucks per day.

The first 1,000 CH600s will primarily be used as demonstrators, said Joseph P. Rosetti, executive vice president, marketing.

The new model will be introduced to Mack's sales force in mid-January when pricing will be announced, he said.

The R model, which the CH600 replaces, had served a dual capacity. It was sold as both a highway tractor and also for light-duty dump, refuse and municipal applications. It gained weight and cost as a construction-oriented vehicle. The new CH600 is purely a highway tractor, according to Warmkessel. It was not designed to have the flexibility to serve other vocational markets, he added.

The new model will be introduced with Mack's E-6 engine, with horsepower ratings up to 350 hp. Late next year, Mack will offer in excess of 400 hp with its new E-7 engine.

Paul C. Ritter, senior vice president of sales, said the CH600 is targeted at four vocational areas: for-hire carriers, including smaller fleets and owner-operators; distribution; leasing; and manufacturing.

The areas represent more than 75 percent of U.S. heavy-duty truck sales, and Mack is aiming to increase its penetration in some of these key areas with the new series.

For example, there are seven segments that account for about 22 percent of industry sales. They include agriculture/forestry, manufacturing, distribution, services, construction, leasing/rental and for-hire.

Ritter said Mack is strongest in construction, with a 32 percent segment share; services, with a 20 percent share; and agriculture/forestry, with a 17 percent share.

However, its penetration in the biggest segments of the market, including leasing and for-hire, is considerably lower.

Ritter said leasing and rental trucks accounted for 21.4 percent of the market in 1982, which has grown to 28 percent by 1988. But, during that same period, Mack's share of this segment declined from 12.8 to 6.1 percent.

Similarly, the for-hire segment grew from 33 percent to 35 percent during that same period, while Mack's share of it fell from 18 percent to 13.5 percent.

Mack's market share grew slightly in the manufacturing sector, but fell in the distribution segment, which has been off industrywide, he said.

Mack launches first new truck line in 2 decades

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

ALLENTOWN, Pa. — The new CH600 is the first all-new line from Mack Trucks since its predecessor, the R model, was introduced more than 20 years ago.

Mack touts its new flagship as "the first all-new, heavy-duty truck of the 1990s."

Company officials said the new model is designed from the ground up as a "driver's truck," with features to make it more comfortable, safer and easier to drive and maintain.

The new truck has 30 percent more interior room than the R, as the cab is a foot wider and offers four inches of additional headroom.

Luxurious interiors in the new model are designed to lure owner-operators, a segment in which Mack's market penetration has been low.

There are four levels of interior trim available, with the Elite Series having the most extras. The optional interiors include items usually found in luxury cars, like a cherry wood-grain panel, leather steering wheel cover, leather door panels and a cellular telephone.

"If we can't attract the owner-operators with these interiors, then we don't deserve the business," said T.L. Warmkessel, director, marketing product planning.

Initially, the CH600 will be fitted with Mack's E-6 engine, a six-cylinder diesel with chassis-mounted air cooling, free-

U.S. trucks maintain hot pace in Nov.

Domestic truck sales maintained their record-setting pace in November. U.S.-based manufacturers continued to increase their share of the burgeoning market.

Overall, the industry retailed 376,035 light-duty vehicles in November, 5.54 percent more than the 356,300 of like 1987.

Eleven-month sales totaling 4,474,519 similarly maintained a strong 4.47 percent gain over last year's record-setting pace of 4,282,944 units.

U.S.-based manufacturers captured 87.02 percent of the market in November, up from the 84.01 percent share they held a year earlier.

For 11 months, their market share of 85.51 percent was also up sharply from 81.21 percent a year ago.

Chevrolet, GMC and Jeep were responsible for all the gains on the domestic side, while Isuzu was the lone importer with a sales gain.

Chevrolet, buoyed by the continuing rise in popularity of its full-sized C/K pickup series, had a strong 23.00 percent overall gain in November on sales of 107,104 light-duty models.

Similarly, GMC, with 29,218 monthly sales, had a 26.96 percent increase in its total.

Jeep's sales of 22,428 trucks in the month were up 15.31 percent over a year earlier.

Ford sales were off marginally, 114,112 versus 115,013 in 1987.

The company's deficit would have been greater if sales of its Class 4 Super Duty models were excluded. No breakout of Super Duty sales was available. They have been accounting for about 2,000 sales monthly.

Chrysler's 54,362-unit performance was also slightly off from last year.

From RVs to buses

Deere chassis aim at commercial market

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — John Deere's vehicle assembly division, having tasted success with its RV chassis, is planning a push into the commercial side of the chassis market early next year.

Deere sold about 9,000 RV chassis to motor home manufacturers in 1988, according to Connie L. Nichols, Deere chassis sales manager. It introduced two new RV chassis at the 26th annual RV Trade Show here including a front-mounted diesel-driven motor home chassis. All its RV chassis are now called "On/Voy."

But, because of heavier competition from Ford and GM, officials expect to sell only about 8,000 RV chassis in 1989 — even while making a strong bid for new business on the commercial side.

Deere displayed two new commercial chassis at the show, outfitted as Champion buses.

One of its chassis is a 6BT, 5.9-liter Cummins turbodiesel-powered model with an Allison AT 542 four-speed automatic transmission. The chassis is a derivative of one of the new RV chassis, according to Mark Andreae, vice president and general manager of Clarke Power Products, Deere's distribution and servicing arm. It has the same engine/powertrain combination as the RV model.

The other new commercial chassis is a 4BT Cummins turbodiesel model with a Borg-Warner five-speed transmission, designed for small step vans. It is aimed specifically at the bakery industry, Andreae said.

Continental Baking is in the process of receiving 51 prototypes of the new chassis vehicles, and Deere has orders for prototypes from most other major manufacturers in the bakery market, he added.

Manufacturers who will offer step-van bodies on the new chassis include Grumman, Utilimaster, Union City and others.

Deere is generally targeting the bakery, small-bus and, with the larger step vans, the transit/airport shuttle bus market.

It plans to officially introduce its new commercial chassis in the first quarter of 1989, and anticipates selling about 8,000 a year. That will put it into direct competition with Ford and GM.

Ford dominates the commercial cutaway chassis market, worth about 25,000 sales annually, and Chevrolet is the leader of the commercial stripped chassis market. Together the two markets are worth about 40,000 to 45,000 sales annually.

Andreae said company officials believe the market will "turn away from chopped vans (primarily supplied by Ford) and go to integrated body and chassis (such as its own units) because of the recent rise in chopped van prices and Ford's exit from the gasoline portion of it."

Ford expects to stop offering gas engines for all bus chassis applications when its new commercial/transit bus package becomes available, late in the 1989 model year or early in the 1990 model year. It will then offer only diesel-powered chassis for the bus market.

It has already started offering only diesels on its school bus chassis, according to Jerome Mittman, Ford Division RV sales manager.

Andreae believes Deere will have some product advantages with its new commercial chassis. For example, it has larger 14-inch, four-wheel disc brakes that last much longer than the typical 20,000-mile life of the chopped van's brakes in stop-and-go driving.

Deere has already been selling commercial chassis to Wheeled Coach, Kansas City Coach, Champion and Eldorado.

Its new chassis, however, are more specifically tailored to commercial bus manufacturers' needs, according to Andreae.

*—U.S.-built Volkswagen models sold after June 30, 1988, are included in import totals.

FROM PAGE 3

all seven U.S. carmakers reported gains.

Import-car sales slipped 2.99 percent to 238,722, from 246,085 in November 1987. Imports accounted for less than a third of the November car market this year. Big losers were Audi, Porsche, Chevrolet captives, Isuzu and Sterling.

The average daily selling rate for the month was 31,631, or 3.70 percent ahead of the 30,502 rate last November. There was one less selling day in November this year.

Car market shares were rearranged slightly in November. GM's share rose 2.61 percentage points, to 35.31 percent, while Ford's share slipped more than half a point to 20.50 percent. Chrysler Motors' dipped a fraction of a point to 10.89 percent. Honda's share dropped a quarter of a point to 8.08 percent. Toyota's edged up almost half a point to 7.93 percent. Nissan's inched up a fraction of a point to 5.11 percent, and Mazda's car share slipped a third of a point to 2.36 percent.

The biggest gain in unit sales was reported by GM. The giant car- maker's domestic and import car sales climbed 16.63 percent ahead of last November.

Ford's combined car sales rose 4.74 percent, and Chrysler delivered 5.86 percent more cars this year than it did last November.

Japanese-based automakers delivered 6.55 percent more import and transplant cars than in November 1987. The European carmakers sold 11.69 percent fewer cars than they did a year ago, and Korean car sales dipped 1.89 percent.

An infusion of incentives helped domestic car makers finish the month with a flourish.

The seven automakers producing cars in the United States began November with a 33.63 percent sales upswing compared with a year earlier. Sales fell 7.81 percent in the mid-November sales period. In the final 10 days, car makers delivered 18.75 percent more U.S.-built cars.

GM's domestic sales bounded up 18.90 percent and each of its divisions reported gains.

Ford Motor's sales rose 3.62 percent. Ford Division's Probe sales continued to pace Mustang deliveries. Continental sales saved the month for Lincoln-Mercury.

Chrysler Motors sold 5.41 percent more U.S.-built cars this November, although its Chrysler Division deliveries were off 26.38 percent from last November.

The two newest transplant car operations, Mazda and Toyota, reported exponential gains. Mazda increased its sales fivefold, and Toyota's deliveries of U.S.-built cars rose nearly one and a half times. Both were just beginning to sell U.S.-built cars one year ago. Nissan sold 35.90 percent more U.S.-built cars in November, and Honda delivered 34.87 percent more cars.

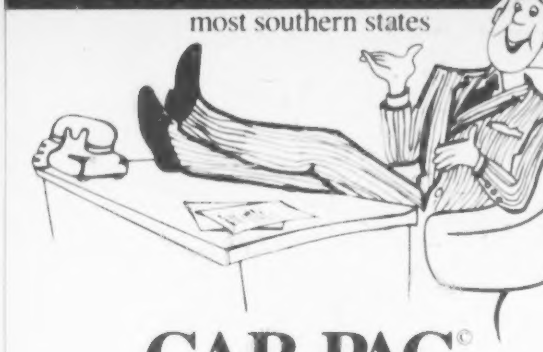
ATTENTION FRANCHISED AUTO DEALERS
most southern states



CAR-PAC©
Garage Insurance Made Easy.

If you're tired and frustrated dealing with too many out-of-town insurance companies, overlapping coverages, a confusing rate structure and high insurance costs, find out how we can simplify your life. CAR-PAC©, a special insurance program for franchised auto dealers, wraps all your insurance needs into one neat affordable package that includes:

- ★ All risk coverage
- ★ Monthly payments
- ★ Local Independent agency representation
- ★ Local claims service
- ★ Financially strong company
- ★ Reduced costs
- ★ Professional service
- ★ Reinsured by America's strongest reinsurer

We'll work with your local agent or ours.
For a competitive proposal on your dealership's garage insurance, call King Luck, Senior Vice President, today.

Porsche top auto brand name

Honda, Toyota, BMW follow in U.S., Japan, Europe survey

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Porsche, Honda, Toyota and BMW are among the 10 most powerful brand names in the world, according to a recent survey of consumers in Japan, Europe and the United States.

Landor Associates, a New York-based consulting firm that conducted the survey, recently asked 3,000 consumers in those three geographic areas about their awareness of and their attitudes toward 2,140 corporate and consumer brand names.

Coca-Cola ranked No. 1 in brand power, followed by IBM and Sony.

Porsche was the fourth most powerful consumer brand name, according to the survey, followed by McDonald's, Disney, Honda, Toyota, Seiko and BMW, in that order.

Each brand name was given an overall brand power rating by formulating both awareness and esteem scores. Ford, which suffered from a low awareness score in Japan, was ranked the 17th most powerful brand name in the study. General Motors ranked as the 37th most powerful brand name.

Many of the same automotive nameplates appeared on lists for the most powerful brand names in each of the three markets. Although consumers in each market tended to rank their own domestic automotive brands higher, some foreign nameplates had strong brand power, pointing to the rising globalization of the auto industry.

European consumers were more impressed by home makes than consumers in Japan or America. Europeans gave all of the first 11 brand power ratings to European cars. Honda placed 12th.

Automotive nameplates made up seven of the 10 most powerful consumer and corporate brands in Europe. Landor attributed the high awareness of car brands to the fact that automakers, unlike makers of other consumer products, market their cars throughout Europe.

"Automotive transcends national barriers," said Stewart Owen, Landor director of research.

"Mercedes, for instance, is ranked in the 10 most powerful brands in Spain, Netherlands, France, Sweden, Belgium, Italy and Germany. But there are brands that are sold in France that are not on any other country's list."

European consumers gave Japanese cars low marks in esteem but they generally had high awareness of those names. For instance, European consumers ranked Toyota 47th among all products in awareness but 329th in esteem. Suzuki was ranked 40th in awareness and 251st in esteem.

"It's less of a case of bad experience than no experience," said Owen, noting that Japanese cars have not been plentiful in Europe until the last several years. Some European countries, such as France and Italy, severely restrict Japanese auto imports.

Japanese consumers were less nationalistic than the Europeans when it came to automotive brand names. Six Japanese car names and four European makes were among the 10 most powerful automotive brands in Japan.

SOURCE: Landor Associates

Alan Taylor, Landor senior vice president and general director of the firm's New York office, attributed the high esteem marks for European makes to Japanese consumers' preoccupation with rare luxury items. Since Japanese restrictions and taxes make large European cars more expensive than domestic makes, acquiring a European car is a status symbol in Japan.

Four European nameplates received higher esteem scores than Japanese car brands in Japan. Mercedes-Benz received the highest esteem ranking for any product followed by Porsche.

In the study of American consumers released in June (Automotive News, June 27), half of the top 10 automotive names in terms of brand power were American. Cadillac received the highest brand power score, followed by GM.

Some of the best known automotive nameplates to U.S. consumers were not always the brands that received the highest esteem scores. Nameplates such as Dodge, Pontiac and Volkswagen received high awareness scores but relatively low esteem scores. By contrast, VW ranked 12th among all products in esteem in Europe, 35th in Japan and 401st in the United States.

Anglo American plans mainland auction for Hawaii cars

AUCTION BRIEFS

CHARLES THOMAS

Anglo American Auto Auctions will transport used cars from the Hawaiian islands to the mainland to sell at its 21 auctions.

Potential Hawaiian clients include daily rental companies, leasing firms, automobile dealerships, manufacturers and distributors, corporations with fleet vehicles and institutions that finance car loans.

Dennis Thee, vice president of sales and marketing for Anglo American, said there is a huge number of business vehicles owned by daily rental companies operating in Hawaii.

He said the size and population of the Hawaiian islands necessitate shipping the vehicles to the mainland to sell. The dealer body in Hawaii is too small to absorb the number of used cars generated there; neither does it make sense to build an auction in Hawaii, he said.

"The bottom line for these Hawaiian businesses is that by doing business with Anglo American, they conveniently accomplish used-car remarketing with one telephone call," said Thee.

He estimated that roughly 60,000 rental vehicles go into the used-car market annually in Hawaii.

"Several leasing firms and corporate fleet departments have also expressed interest," said Thee.

The company has opened an office in Honolulu and said it may establish a vehicle marshalling center where vehicles would be stored and inspected prior to shipping.

Lionel Freitas has been named director of Pacific operations.

Some companies already ship used cars to the mainland to sell them. It takes roughly four to six days to transport them at a cost of $300 to $400 per vehicle.

Plus 10 adds dealers

Greater Chicago Auto Auction said it signed up nearly 50 dealers for its Plus 10 pilot financing program, which allows dealers to delay payment on their purchase of vehicles for 10 days.

"It has gotten very good reception," said Joseph Lyng, manager of Greater Chicago Auto Auction.

To use Plus 10, dealers show their auction buyer's card with the Plus 10 designation. Their payment for the cars must arrive 10 days later.

Dealers can use their credit line to buy any vehicle not exceeding $20,000. There is a limit to the number of vehicles dealers can buy under the program, but the limit can be increased depending on use.

Dealers receive titles when the payment is made.

Fees are $35 for vehicles costing up to $5,000; $50, $5,001 to $10,000; $75, $10,001 to $15,000; and $100, $15,001 to $20,000.

AUCTION DATES

Chrysler Motors

Dec. 13 — Dallas Auto Auction, Grand Prairie, Texas; Arena Auto Auction, Chicago; Greensboro Auto Auction, Greensboro, N.C.; Southern Auto Auction, Warehouse Point, Conn.; Portland Auto Auction, Portland, Ore.; Riverside Auto Auction, Riverside, Calif.; and Hatfield Auto Auction, Hatfield, Pa.

Dec. 14 — A.D.E. of Birmingham, Birmingham, Ala., and Columbus Fair Auto Auction, Obetz, Ohio.

Dec. 15 — Fredericksburg Auto Auction, Fredericksburg, Va.; Indianapolis Auto Auction, Indianapolis; Omaha Auto Auction, Omaha, Neb.; and Southwest Auto Auction, Phoenix, Ariz.

Dec. 16 — St. Louis Auto Auction, St. Louis, and Manheim Auto Auction, Manheim, Pa.

Ford Motor Co.

Dec. 13 — South Seattle Auto Auction, Kent, Wash.

Dec. 14 — Northway Auto Exchange, Clifton Park, N.Y.; Clanton's Auto Auction, Darlington, S.C.; Aptco Auto Auction, Taylor, Mich.; Mississippi Auto Auction, Hattiesburg, Miss.; Indianapolis Auto Auction, Indianapolis; Southern California Auto Auction, Fontana, Calif.; and Omaha Auto Auction, Omaha, Neb.

Dec. 15 — Baltimore-Washington Auto Exchange, Baltimore; Arena Auto Auction, Chicago; Dallas Auto Auction, Grand Prairie, Texas; Denver Auto Auction, Aurora, Colo.; Minneapolis Auto Auction, Plymouth, Minn.; Nashville Auto Auction, Nashville, Tenn.; and Southwest Auto Auction, Chandler, Ariz.

Dec. 20 — Harrisonburg Auto Auction, Harrisonburg, Va., and Golden Gate Auto Auction, Fremont, Calif.

Dec. 21 — Albuquerque Auto Auction, Albuquerque, N.M.; Concord Auto Auction, Acton, Mass., Metro Auto Auction of Kansas City, Lee's Summit, Mo.; Lakeland Auto Auction, Lakeland, Fla.; Newburgh Auto Auction Inc., Newburgh, N.Y.; and Salt Lake Auto Auction, Salt Lake City.

Dec. 22 — Wednesday Auto Auction, Obetz, Ohio; Skyline Auto Exchange, Fairfield, N.J.; and St. Louis Auto Auction, St. Louis.

General Motors

Dec. 13 — A.D.E. of Birmingham, Moody, Ala.; Florida Auto Auction of Orlando, Ocoee, Fla.; and Manheim Auto Auction Manheim, Calif.

Dec. 14 — Indianapolis Auto Auction, Indianapolis; Metro Auto Auction of Kansas City, Lee's Summit, Mo.; and Minneapolis Northstar Auto Auction, Shakopee, Minn.

Dec. 15 — Arena Auto Auction, Chicago; Ohio Auto Auction, Grove City, Ohio; St. Louis Auto Auction, Bridgeton, Mo.; and Utah Auto Auction, West Bountiful, Utah.

Dec. 20 — Southern Auto Auction, East Windsor, Conn.; Dallas Auto Auction, Grand Prairie, Texas; and Harrisonburg Auto Auction, Harrisonburg, Va.

Dec. 21 — Atlanta Auto Auction, Atlanta; Baltimore-Washington Auto Exchange, Baltimore; Clanton's Auto Auction, Darlington, S.C.; Southern California Auto Auction, Fontana, Calif.; Puget Auto Auction, Auburn, Wash.; and Omaha Auto Auction, Omaha, Neb.

Dec. 22 — Butler Auto Auction, Gibsonia, Pa.; Aptco Auto Auction, Taylor, Mich.; Nashville Auto Auction, Nashville; and Denver Auto Auction, Englewood, Colo.

WORLD

FROM PAGE 1

America and Asia-Pacific.

DRI-Europe forecasts that worldwide new-car registrations will rise each year from 1989 through 1993, when demand will reach 35.53 million cars. Despite that projected record performance, the United States, Europe and Japan will not reach 1988 sales levels in 1993, according to the research group. World growth over the next five years will be due to increased demand in Asia-Pacific, Latin America, Africa and the Middle East.

SOURCE: DRI World Automotive Forecast Report, November 1988

New-car sales in the United States are exceeding all expectations in 1988, according to DRI-Europe, and will probably finish at 10.70 million, a 4.6-percent increase over last year. But DRI says the trend will not continue into 1989. Instead, demand will dip 4.8 percent to 10.19 million.

"With limited growth in consumer spending, rising interest rates and an upward trend in consumer prices projected for 1989, DRI expects to see a decline in 1989, with the market returning to 1987 levels," the report said.

Ted Sullivan, director of automotive analysis, Wharton Economics, agrees that U.S. interest rates will continue to rise.

"The prime rate is at 10.2. We think it will go up to 11 by mid next year," he said.

He suggested that auto loans will follow suit, stealing a lot of affordability and adversely affecting consumer buying attitudes. Sullivan figures that for every 100 basis-point increase, 280,000 vehicle sales are lost.

Sullivan also predicted that imports will get hit the hardest and noted, "The South Koreans will get hit worse because they are in the low end of the market. Those buyers are more sensitive."

Another view on the U.S. front was offered by David Healy, auto analyst, Drexel Burnham Lambert, New York. "I think we're looking at slightly lower sales ahead. They should be reasonably strong until 1990. In 1989, we're looking at market saturation and moderately higher loan interest rates."

Healy believes the U.S. economy will run out of capacity and he predicts there will be "labor shortages, higher prices and the Fed will continue to tighten money."

The National Automobile Dealers Association, which last week released its forecast, shared a similar outlook for 1989. It predicted 10.2 million car sales, citing increases in personal debt, higher vehicle prices and increasingly reliable late models as factors in the pending decline.

The NADA forecasters also noted that for the first time in many years, the average monthly payment necessary to finance a new vehicle will increase faster than family income. It, too, forecasts a difficult time for entry-level vehicles, saying sales of subcompacts will drop more than 11 percent.

DRI expects Western Europe, Japan and the Pacific region to conclude 1988 at record sales levels.

Four of the five biggest European markets — the United Kingdom, France, Italy and Spain — will all surpass 1987 sales. The United Kingdom and France will each eclipse 2 million units for the second straight year, and Italy will go over the 2 million mark for the first time. Spain will break the 1 million barrier in 1988, DRI predicts.

West Germany achieved record volume of 2.92 million cars in 1987 but will decline to 2.73 million this year.

Next year, France, the United Kingdom and Italy will each fall below 2 million units, the research group said. DRI-Europe also expects Spain will drop back below 1 million cars, countering most industry forecasts that the fast-growing Spanish market will continue to expand.

DRI projects that Italy's Fiat will finish the year as the No. 1 seller in Europe, ending Volkswagen's three-year reign. It also predicts that Fiat's hold on first place will continue as availability of its new Tipo mid-range model increases in European export markets.

DRI says new registrations in Japan will rise more than 10 percent in 1988 to 3.61 million cars. But though the Japanese economy will keep growing next year, a more liberal tax structure expected to be introduced in 1990 will cause new-car registrations to decline 6.9 percent to 3.36 million in 1989 as buyers defer purchases. However, sales will achieve a record 3.67 million in 1990 as a result of pent-up demand and lower tax rates.

Registrations will also rise this year year in peripheral markets, including the Pacific region, Africa, the Middle East and Latin America, said DRI-Europe.

The research group said Brazilian demand will increase 30 percent this year to 530,000 units and rise another 9 percent in 1989, through sales will remain well below the record levels of the early 1980s.

Registrations in South Korea will go from 313,000 this year to 384,000 in 1989 and climb to 526,000 in 1993, the report predicts.

DRI-Europe is forecasting less dramatic sales growth in Taiwan, which will rise from 272,000 units in 1988 to 292,000 next year and 321,000 by 1993.

Demand will also rise next year in the Malaysian Peninsula, Australia, New Zealand and India and continue to grow in the early 1990s.

The Latin American markets, including Brazil, Mexico and Argentina, are likewise generally expected to expand over the five-year period.

DRI-Europe said world production will grow 3.7 percent to a record 34.31 million in 1988. But the expected decline in demand next year will cause output to fall by 2.5 percent to 33.44 million. However, further growth is forecast for the early 1990s.

European production will grow by about 400,000 units this year to 12.9 million. Only West Germany and Sweden, with their heavy dependence on the slumping U.S. import market, will produce fewer cars in 1988 than in 1987. But next year, production is expected to fall in almost every European producing nation as total output declines to about 12.2 million units, the report said.

West German car production will continue to fall next year due to further depression of the local car market caused by to higher fuel taxes and an end to tax incentives for catalytic converter-equipped cars, DRI-Europe predicts.

West German producers are also hurt by expected declines in their major European export markets and the overall aging of German-built high-volume mid-range models, the VW Golf, Ford Escort and Opel Kadett. Another factor, according to DRI, is the expected shift of some sourcing from West Germany to lower-cost United Kingdom plants.

DRI-Europe projects that 1993 world car production will be 36.17 million cars, a 5.4-percent increase over 1988. Production in the United States will rise 5.3 percent to 7.54 million from 7.16 million over the five-year period, and western European output will grow less than one percent, to 12.94 million from a projected 12.92 million this year.

Japanese production, however, will fall 4.4 percent to 7.69 million over the next five years, which DRI-Europe attributes to local manufacturers moving more production offshore.

The report projects a 30-percent jump in South Korean production from 886,000 in 1988 to 1.15 million next year and 1.68 million by 1993.

Automotive News Staff Reporter Philly Murtha in Detroit contributed to this report.

PRODUCTION

Truck, auto output hit Nov. record

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

United States truck makers set a production record for November of 358,746, surpassing the previous record of 339,721 set in 1978.

Last month's output was slightly higher than October's 355,438 and 13.96 percent more than the year-ago month's 314,792.

Last week's targeted truck output of 95,003 dipped 3.06 percent from the prior week's 98,005 but rose 12.54 percent from the year-ago week's 84,417.

Year-to-date, 3,949,036 trucks have been assembled, 7.50 percent more than the 3,673,498 built last year at this point.

Carmakers' build of 645,987 for November was the highest for that month since 1985 when 668,083 cars were assembled.

Last week's scheduled production totaled 166,892 cars, 1.77 percent more than the previous week's 163,995 and 11.22 percent above the year-ago week's 150,058.

So far this year, 6,769,014 cars have been assembled, slightly below (0.71 percent) the 6,817,705 built last year at this time.

Companies split last week's scheduled production as follows: General Motors, 46.98 percent; Ford Motor Co., 25.09 percent; Chrysler Motors, 17.44 percent; Honda of America Manufacturing Inc., 4.49 percent; Mazda Motor Manufacturing Co. (U.S.A.) Corp., 3.42 percent; Nissan Motor Manufacturing Co. U.S.A., 1.37 percent; and New United Motor Manufacturing Inc., 1.21 percent.

GM's Lordstown, Ohio, plant remains idle until Jan. 3 to change the paint system. Overtime was slated last Saturday at Janesville, Wis.; Lansing, Mich.; Lordstown, Ohio; Flint, Mich., Fort Wayne, Ind.; Shreveport, La.; and Moraine, Ohio.

Volvo GM Heavy Truck Corp. increased output at its plant in Dublin, Va., by five units per day to 60 trucks per day. The move adds 50 workers.

Saturday overtime was slated for Ford's Twin Cities, Mo., and Lorain, Ohio, plants. Daily overtime is slated at all Ford car and truck plants this week.

Production rate slips in Canada

Production of cars in Canada for November totaled 79,071, 8.65 percent below October's 86,563 and 19.16 percent below the year-ago month's 97,817.

Last week, automakers scheduled 17,527 cars to be built, 4.47 percent below the prior week's 18,347 and 19.30 percent below the year-ago week's 21,720.

So far this year, 991,628 cars have been built, 29.28 percent above the 767,014 completed last year at this time.

Truck output for November totaled 91,224 units, 7.80 percent above the October output of 84,627 and 32.98 percent above the year-ago month's 68,602.

Truck makers targeted 21,314 units to be built last week, 2.58 percent more the previous week's 20,777 and 11.83 percent above the year-ago week's 19,060.

Gas-tax hike could peril auto sales

Chrysler, Ford support increase

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — As support grows for a gas-tax boost to help solve federal budget problems, new studies reveal that the effects on the automobile industry and the highway system could be devastating.

Vehicle production would decline by 460,000 units — half cars, half trucks — annually and the industry would lose more than 120,000 jobs if the gasoline tax is increased 15 cents per gallon, warns an economic study by General Motors.

The effects of a 45-cent hike would be far more dramatic and could slash car sales by as many as 1.5 million units, the GM study said. The sales loss would be felt most severely by the three domestic car companies because foreign-car sales would go up as gas prices rise, GM said.

Similar conclusions were drawn by the Wall Street firm Smith Barney, which found that a gas tax would shift the mix of cars back to smaller, imported models.

Smith Barney economists agreed with GM's finding that a tax increase would hurt sales, but its estimates are lower than GM's worst-case scenario. Smith Barney found that each 10-cent rise in the price of gasoline reduces new-vehicle demand by at least 150,000 to 200,000 vehicles, or about 1 percent in today's market of 15.5 million cars and trucks.

Chrysler Chairman Lee Iacocca has called for a gas tax increase to ease budget problems and Ford Vice Chairman Harold Poling reiterated last week that he would support such a move. But GM has been against a tax hike.

Ironically, Smith Barney said Chrysler would be hardest hit of the domestic manufacturers by a tax hike. The firm said higher fuel prices would depress truck sales faster than auto sales and Chrysler is more dependent on trucks than GM or Ford.

GM estimated that with a 15-cent tax hike, its car sales would drop by 240,000, Ford's would decrease 160,000 and Chrysler's 90,000, with a 10,000-unit loss split among other domestics. But foreign-car companies would gain sales of 40,000 because of the increased demand for fuel-efficient cars, GM said.

The Smith Barney study found the relationship between a decline in vehicle sales and an increase in gas taxes would be linear up to 25 cents per gallon, but beyond that point, sales would drop at faster rate than the increase in the price of fuel.

Chrysler Millennium, top, demonstrates the company's technology and design direction for the 1990s, while Dodge Viper appears to blend the classic lines of a 1960s Cobra with V-10 punch

SHOWTIME: *Chrysler's 1990s concepts to be exhibited in Detroit*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors will unveil five concept vehicles and a 1990 production model at next month's North American International Auto Show in Detroit.

The concept vehicles seek to emphasize the image the company is cultivating for each of its car and truck brands.

The six vehicles are:

- The Chrysler Millennium — a four-place sedan that emphasizes safety and control-related features.
- The Plymouth Speedster — a youth-oriented two-place coupe designed as a mating between high-performance motorcycles and open sports cars.
- The Dodge Viper — a rear-wheel-drive convertible conceived as a classic American drop-top with styling cues borrowed from late 1950s and early 1960s wind-in-the-face roadsters. The car is mounted with a V-10 engine.
- The Dodge Dakota Sport V-8 — a truck package based on the Dakota mid-sized pickup packed with a V-8 engine.
- Jeep concept sport-utility vehicle — a more aero-looking Jeep Cherokee, achieved with flush side glass and a windshield rake seven degrees beyond that of a production Cherokee.
- The Eagle Talon — the 1990 version of the sport coupe marketed by Plymouth as the Laser and Mitsubishi as the Eclipse.

Plymouth Speedster depicts the mating of high-performance motorcycles and open sports cars

Thomas Gale, Chrysler Motors vice president of product design, said the company will monitor reaction to the vehicles on the 1989 auto show circuit.

"I don't think we've reached far enough if the show car ends up in production," Gale said. "But elements of them will end up in production."

Of the concept vehicles, the Dodge Viper

Lease value off; lending firms suffer

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Leading banks and financial institutions are smarting from hefty losses on the residual values of hundreds of thousands of retail lease vehicles that are now coming to term.

Banks that have been heavily involved in automotive retail leases like California-based Security Pacific are scurrying to lower residual values set on retail lease vehicles as the actual resale prices of the vehicles coming off lease fall short of the residuals. This could make the leases less attractive to consumers because monthly payments will rise.

Even Ford Motor Credit concedes that its losses have been substantial on residual values of vehicles coming off lease — particularly for low-end vehicles like Escort, Lynx, Tempo and Topaz.

"We have had some heavy residual losses," said Cliff Damaska, retail lease manager — Ford Motor Credit. "We screwed up on selected car lines and set the residual values too high."

A spokesman from Chrysler Financial Corp. acknowledged the company has experienced residual losses on retail leases but declined to detail them.

Bill Nerenberg, executive director of the National Vehicle Leasing Association, said residual losses exist mainly at banks that are new to retail leasing, but the problem does spread across the entire industry.

"A lot of the banks have been looking at residual losses," he said. "They offered bargain-basement payments on unrealistically high residuals."

That pretty much characterizes what many financial institutions, particularly on the East and West Coasts, did as they hurried to write competitive retail leases beginning in the mid-1980s. To keep consumers' monthly payments low, they set high residual values.

Those leases began terminating in 1987. The vehicles are being returned to dealers rather than bought by lessees, and they are bringing far lower prices than the residual values set in the original agreements.

Best estimates by industry officials peg averages of vehicles coming off lease at 7 to 10 percent less than predicted. And some vehicles could be as much as 20 percent beneath original predictions.

The residual value problems could affect as many as

From cash to people

Another big job for 'GM's other Smith'

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — For seven years, during one of the most crucial periods in the history of General Motors, F. Alan Smith held one of the corporation's most important posts, that of chief financial officer.

Today, he has a different job — executive vice president, in charge of the operating and public affairs staffs groups — one that could prove to be equally as important during another crucial period for GM.

As head of the operating staffs, Smith ultimately is responsible for every GM employee, and it is the employees of GM, Smith believes, who will be the key element in GM's turnaround or lack thereof.

The operating staffs include the industrial relations department, which is responsible for hourly workers, and the personnel administration and development department, which covers salaried workers.

Smith said in an interview that

Smith: responsible for everyone at GM

Ford develops catalyst with no platinum

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s announcement last week that it has developed a catalytic converter that does not require platinum sent prices of platinum and other precious metals plummeting worldwide.

Although Ford would not disclose what it would use as a replacement, a source familiar with the project said that palladium, rhodium and cerium — all less expensive than platinum — are used.

The new catalytic converter will be used in 40,000 to 50,000 1989-

Ford rushes to purchase ailing thrifts

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. confirmed last week that it has stepped up its pursuit of some of the nation's troubled savings and loan associations in an effort to beat a year-end change in tax laws.

Ford, which is sitting on $9.3 billion in cash, has made no secret of its intent to expand its financial services business through acquisitions. But the company is now scurrying to take advantage of tax breaks that are scheduled to lose half their value by Jan. 1.

"To be frank, we are interested in acquiring the savings and loans because of the tax credits we could earn and because we think we could turn them around and make them profitable," Vice Chairman Harold Poling told reporters in Washington last week.

Ford has been an "active bidder" for troubled thrifts throughout the year, said a spokesman for the Federal Home Loan Bank Board.

So far, about 150 struggling institutions have been dealt. Ford, through its First Nationwide Bank subsidiary, has been able to pick up just one — the $1.2 billion Lincoln Federal Savings and Loan Association, Westfield, N.J.

The bank board has said that it expects another 50 to change hands by the end of the year, so there should be a flurry of activity in coming weeks.

Some of the deals could be completed in unique ways, the board has said. The troubled financial institutions have been sold as single units as well as in packages.

A year ago, Ford was pursuing one of the nation's largest thrifts, the $33.5 billion American Savings and Loan Association. The bank board broke off those negotiations, however, and the unit is now in the process of being acquired by the Robert M. Bass Group of Texas.

Any major purchases could place First Nationwide Bank closer to the top of the S&L industry. As of Sept. 30 it ranked sixth. It currently has more than $24 billion in assets.

New GMC Rustler model will be part of spring drive

GM's upscale pickups

Tony Lama, Stetson models spice lineup

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — General Motors is using designer trucks, created by some of the RV industry's best-known upfitters, to bolster its competitiveness in the pickup market.

Keith Ball, GMC Truck manager of special vehicles, calls it third-party marketing. Jeff Nihart, Bivouac Industries truck and special project manager, calls it horizontal marketing.

Regardless of the label, the difference between those customized pickups and traditional van conversions is that they don't bear the converter's name but rather that of a third, high-status company.

"We're not promoting Bivouac. We're promoting Chevys and GMCs" through special license agreements with companies like Rustler, Stetson and USA-1, Nihart said.

The specially packaged models provide upper-level trim series to GM vehicles, and give dealers and the companies multiple promotional opportunities, Nihart added.

Aviator Conversions, Wakarusa, Ind., first offered a Winchester series for GMC last year and followed up with a Tony Lama line for Chevrolet this year.

This spring, Bivouac, in Vandalia, Mich., together with Chevrolet, GMC, their dealers and the brand-name companies involved, plans a variety of promotional efforts on the new Rustler, Stetson and USA-1 models it has been producing.

Dealers, along with the truck divisions, are expected to pitch in on funding for the promotions.

The Rustler is a package for both Chevrolet and GMC full-sized pickups. The Stetson and USA-1 are variations for GMC and Chevrolet, respectively, for larger dealers who want additional variety in their orders.

The packages all have a dealer base price of $1,999.

Nihart, who designed the program, said one advantage is that it will give dealers exposure where they normally aren't represented, such as at state fairs and on the sports cable television station ESPN.

Chevrolet, for example, has been running a "Truck 'n Boot" sweepstakes for the Tony Lama trucks.

Nihart anticipates selling 5,000 of the Bivouac-created models in the 1989 model year.

Bivouac has a five-year contract with Stetson and the other signature companies. It is authorized to offer additional models next year.

GMC's Ball said other specially designed vehicles and promotional efforts, involving other converters like Choo-Choo Customs in Chattanooga, Tenn., are running in other areas of the country.

The pickup conversion market is not nearly as sophisticated as the van conversion market.

Still, it is emerging as the best new opportunity for converters, particularly those interested in joining GMC's bailment system.

At the Recreation Vehicle Industry Association's 26th annual Trade Show in Louisville, Ball said he was unlikely to approve any new van converters for GMC's consignment system. He said he already had enough to handle all the van chassis allocated to the division.

"If we add anybody to our bailment, it would be for upfitting Suburbans, S-15s or Sierras. The last five companies I added were all strictly in pickups and Suburbans," Ball said.

Dodge prepares pickup campaign

By Joseph Bohn
AUTOMOTIVE NEW STAFF REPORTER

HIGHLAND PARK, Mich. — Within three weeks, Dodge will launch a major marketing program to restore its flagging pickup sales.

Jerome York, Chrysler Motors vice president of Dodge car and truck division, also said the division:

- Will introduce a new Shadow convertible in the 1990 model year. Sourcing hasn't been determined.
- Will price the new Dakota convertible pickup truck near $14,000.
- Will introduce a new full-sized pickup line before 1994 if circumstances are propitious.
- Already has dealer orders for its full 1989-model allotment of turbodiesel engine models;
- Is interested in fielding a commercial chassis for the Class 4 market segment. York sees Class 4 trucks "growing tremendously" over the next five years.

Dodge dealers, frustrated by their declining sales of full-sized pickups in an otherwise booming market, have blamed the company's lack of aggressiveness.

Dodge's full-sized pickup sales were off 15.42 percent for the first 11 months of calendar 1988. Dodge lost 2.00 percentage points of market share in that 1.3-million-unit segment.

York said Dodge wasn't able to fully compete in the segment because of inventory shortages created by a 1988 production schedule made in the wake of the October 1987 stock market crash.

Its dealers only now have enough pickups to participate in a major new marketing drive being planned for Dodge Ram and Dakota pickups within three weeks, he added.

Chrysler will produce 52,000 full- and mid-sized pickups during the fourth quarter of this year and plans to build 54,000 in the first quarter of 1989, up sharply from 37,000 units in the first quarter of 1988.

Although York mentioned only pickups, the rumor among dealers is that Ramchargers, with rebates of up to $1,500, will also be included in the sales drive.

Meanwhile, York said pickups fit with the new Cummins turbodiesel are "sold to the walls." Chrysler built 6,000 this fall and will build another 12,000 from January through June, when production will halt for the model year.

York said that because 50 percent of the diesel models' sales are incremental, they represented at least a 9-percent increase in Chrysler's normal 100,000-unit annual big-pickup volume.

Chrysler invested about $40 million in this engine/truck project.

It is seeking an increase in the 1990 model year over the 18,000 slated for this model year.

Meanwhile, members of Dodge's dealer council, meeting with division officials recently, were highly irate at learning that they may not get a new line of full-sized pickups until 1994.

York said that Chrysler policy is to not discuss the exact timing of forward model programs. It also did not give dealers "hard information about our new-model plans beyond 2½ years" out because economic conditions could alter their timing.

He described dealer reports that the new pickups wouldn't bow until 1994 as a "worse-case scenario. The reality is sooner than that."

He added, however, that "our experience has been that you can't control all the variables. For example, we don't plan a recession, but the probabilities are that, over the next couple of years, we will likely see one."

York added that "on balance, the dealers were pretty happy with our product plans through 1992. Our objective is to keep them in the No. 3 divisional position and keep them selling a minimum of one million units a year."

He said there were "firm plans" for a 1990-model Shadow convertible, and "we think Dodge will do about 25,000 units a year."

The Dakota convertible, going into production next month, should "easily do 5,000 the first year," he said.

Although available only on the Dakota Sport model, which has "a lot of standard equipment," it will "definitely be at the low end of convertible pricing — pushing up toward $14,000," York said.

Ford Motor Co.'s success with its Class 4 Super Duty models has caught the attention of Chrysler, which would like to enter this segment within a few years.

Mercedes and GM go to court; seek retroactive CAFE rollback

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — General Motors and Mercedes-Benz of North America have gone to court to find out if NHTSA is correct in saying the law does not allow it to roll back corporate average fuel economy standards retroactively.

Both companies have petitioned the U.S. Court of Appeals for the District of Columbia circuit for review.

The two automakers have petitioned the agency to roll back the CAFE standard retroactively so they can avoid penalties for not meeting it.

While the arguments from all parties will be similar to those made in NHTSA proceedings more than a year old, the government is expected to use a recent Supreme Court ruling on retroactive rulemaking that may apply in the CAFE case.

That decision, Bowen vs. Georgetown University Hospital, says in part that "retroactivity is not favored in the law. Thus, congressional enactments and administrative rules will not be construed to have retroactive effect unless their language requires this result. By the same principle, a statutory grant of legislative rulemaking will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms."

Last year, GM asked NHTSA to roll back retroactively the 1985 CAFE standard, which Congress had set at 27.5 mpg. Mercedes-Benz asked for the retroactive rollback of both the 1985 and 1984

see CAFE, page 42

$500 rebate SHO-prises Ford execs

No, the beancounters at Ford Motor Co. haven't gone mad. You might simply chalk up their recent largess to a case of unintended incentivization.

After all, it's not every day that any automaker gives away $500 on a brand-new model. Yet some of the first owners of the Taurus SHO have been handed an unexpected rebate along with their keys to Ford's new high-performance sedan.

The SHO hardly needed a sales push. Orders have already exceeded the 10,000 mark — more than half of what Ford can build this model year. And the car has been on sale only two months.

The rebate can be traced to a program Ford intended for more sedate Taurus models beginning Nov. 9. Then the SHOs began trickling into dealerships. Its arrival apparently triggered a question: Since the SHO is a Taurus, shouldn't it qualify for the rebate too? Ford decided that because it never said the SHO wasn't covered, it had a legal obligation to include the new model in the program.

Dealers said their customers were eager to grab the $19,739 SHO without a rebate. But they haven't thumbed their noses at the checks, either.

"I think they figure it's a little bonus," said Dave Sinclair Jr., general manager at Dave Sinclair Ford in St. Louis.

Ford doesn't have to worry about losing its shirt on the deal. Sinclair and a sales manager at another large Ford dealer said they had received only a handful of SHOs so far. Ford recently cut off the SHO incentive, limiting it to cars delivered by Dec. 15.

As of last week, Ford's Atlanta assembly plant had built about 4,300 SHOs. Many of those are in the pipeline to showrooms.

— David Versical

LEGAL BRIEFS

Pa. Pontiac dealership to honor vacation trips

HARRISBURG, Pa. — An Allegheny County new-car dealership will make good on its promise of vacation packages to more than 350 consumers under a court agreement with the Pennsylvania attorney general's office of consumer protection.

The attorney general's office said the agreement requires Cochran Pontiac Inc., Monroeville, Pa., to pay $500 in costs pertaining to the investigation and to refund fees and deposits paid by consumers.

The agreement, an assurance of voluntary compliance, alleges Cochran placed advertisements promising vacations in Las Vegas, including airfare and hotel accommodations for two, for consumers who bought certain vehicles from the dealership. But when the travel promotion firm arranging the trips went out of business, consumers were unable to arrange for the vacations, said Attorney General LeRoy S. Zimmerman.

The assurance alleges Cochran's ads led consumers to believe the vacations were offered at no charge, when in fact, consumers were required to pay $130 in fees and deposits to the travel agency, Zimmerman's office said.

Although not admitting wrongdoing, Cochran will offer 353 consumers a choice of a substitute vacation package greater in retail value and character to the Las Vegas trip or $100 cash.

Cochran will refund any fees or deposits paid by consumers.

The assurance was signed for the dealership by its vice president, R.E. Cochran.

Solar heater buyers sue Chrysler First Financial

WHITTIER, Calif. — A consumer group has filed a federal class-action suit against Chrysler First Financial, a division of Chrysler Corp., alleging criminal violations of federal racketeering laws.

The suit, filed by a group called Public Interest Inc., also names several California-based solar heating companies.

The suit claims that "Chrysler jointly devised a sophisticated scheme designed to systematically defraud homeowners through a process of selling and financing domestic solar heating systems."

This case, Mercado vs. Chrysler First Financial, was filed in U.S. District Court in Los Angeles and asks damages and relief under provisions of the Racketeering Influence and Corrupt Organizations section of the Organized Crime Control Act of 1970.

"If successful, this nationwide lawsuit will benefit more than 200,000 victimized homeowners in about 30 states," said Joe Morgan, Public Interest director.

"Using a systematic scheme of high-pressure sales, phony gifts, quick installations, exaggerated utility savings, bogus rebates, defective equipment, hidden finance charges, and undisclosed liens on homes, Chrysler Financial, and a host of solar companies, bilked an estimated $2 billion from American homeowners from 1983 to 1986," said Morgan.

"Many homeowners who lost more than $10,000 each to Chrysler have written Lee Iacocca asking him to make this right as he did with the old Chryslers sold as new cars. All we got was a legal response. Now we have given Chrysler our legal response," said homeowner Cesario Mercado of Oxnard, Calif.

A Chrysler Financial spokesman said he could not comment on matters of pending litigation.

Court says dealer beef can't cross state line

CINCINNATI — A federal court has ruled that a Kentucky law allowing a dealer to protest placement of a competing franchise within 10 miles of his operation does not apply when the complaining dealer is in another state.

The U.S. Court of Appeals for the Sixth Circuit agreed with a lower court's position that Kentucky did not intend to protect an out-of-state dealership even though it was within 10 miles of a new Kentucky dealership.

In 1985, Peugeot Motors of America granted a franchise to The BMW Store in Ci[illegible]. Later, Riverside Ford [illegible]ort, Ky., applied to Eas[illegible] Distributors Inc., an inc[illegible]stributor of Peugeots, f[illegible]e that was within 10 mile[illegible] BMW Store, but on the Kentu[illegible] side of the Ohio River.

The BMW Store then sued Peugeot Motors, Eastern Auto Distributors and Riverside Ford, seeking a preliminary injunction restraining Eastern and Riverside under a Kentucky law that allows the dealer affected by the 10-mile rule to file a protest and stay his potential competitor's operation until the Motor Vehicle Commission holds a hearing.

The district court denied the Ohio dealership's request for a stay and the federal appeals court affirmed the decision.

Dealer loses appeal over competitor's site

PITTSBURGH — Bianchi Subaru has found what a difference a day can make when appealing the placement of a competing Subaru point within its relevant marketing area.

A Pennsylvania court upheld a decision by the state's Board of Vehicle Manufacturers and Dealers that dealer Raymond Bianchi's protest was invalid since it arrived 21 days after he learned that Penn Jersey Subaru intended to open a point within his market area. State law says the protest must be filed within 20 days.

Bianci was notified of the new point by his distributor Dec. 10, 1986, and was told that no internal appeals procedure exists within the organization. Bianchi mailed his letter of protest to the state board Dec. 30 and it was not received until Dec. 31.

After the state board dismissed his protest as being untimely, Bianchi appealed, saying the 20-day provision applies only after a dealer has gone through an internal appeals process and, as a result, the law is ambiguous when such a system is not available. In that case, Bianchi argued, a reasonable period — such as 21 days — should be allowed.

Judge Alexander Barbieri said he found no ambiguity in the application of the 20-day limit and agreed with the state board that the protest was not officially filed until it was received by the board.

Bianchi said he is still conferring with his lawyers about possible further litigation.

"It would be risky suing my distributor, because, as you know, they're like God. They decide how many cars you get (to sell) and when you get them."

Penn Jersey is one of three remaining independently owned Subaru distributorships.

Ohio charges dealer deceived customers

HAMILTON, Ohio — The state attorney general has charged that Motzer Dodge-Jeep-Eagle allegedly deceived new- and used-car buyers by adding delivery and handling charges to sales contracts.

Motzer is alleged to have charged buyers a $95 fee, claiming the fee covered the cost of inspecting and preparing new cars for delivery and overhead expenses.

"This fee seems erroneous because preparation costs for new cars are reimbursed to the dealer by the manufacturer, and preparation services are not performed on used cars," said a spokesman for the attorney general's office.

The suit seeks refunds plus interest for customers overcharged by Motzer during the past two years. The dealership also could be liable for up to $100,000 in civil penalties for violations of state law.

A spokesman for the dealership declined to comment.

Car inventories rise; 71-day supply tallied

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Stocks of new U.S.-built cars and imported cars crept up in November in spite of improved sales and introduction of bolder incentives by the Big 3.

Inventories, however, were about average for the beginning of December. Some dealers told Automotive News that their stockpiles were just right considering the Big 3 plant closings in December for the holidays.

Import-car stocks, however, were the highest for any Dec. 1 since Automotive News began compiling such figures.

Lagging November sales were responsible for bulging import stocks. Makes with stocks representing 100-200 days' supplies included all the Big 3 captives, Isuzu, Suzuki, Audi, Volskwagen, Alfa Romeo, Sterling, and Yugo.

On Dec. 1, combined import and U.S.-built car stocks were 2,238,205, equal to a 71-day supply. That was 7.08 percent higher than on Nov. 1, when there were 2,090,681 cars, representing a 65-day supply.

However, combined car stocks were shaved 1.36 percent below last Dec. 1, when there were 2,269,629 unsold domestic and import cars, equal to a 74-day supply.

This year, domestic carmakers' share of the combined car stockpile on Dec. 1 was reduced by 2.32 percentage points. Domestic cars represented 71.99 percent, and the import share was 28.01 percent.

December opened with 627,074 imported cars in stock, equal to a 66-day supply, compared with 603,043 unsold imported cars on Nov. 1, for a 65-day supply. A year ago, there were 583,128 imported cars, representing a 57-day supply.

The Dec. 1 stockpile of U.S.-built cars totaled 1,611,631 units, a 73-day supply. That was 8.33 percent higher than last month's 1,487,638, a 66-day supply.

Domestic-car stocks were 4.44 percent below a year ago on Dec. 1 when there were 1,686,501 cars, representing a much fatter 83-day day supply because of slower November deliveries.

The average Dec. 1 days' supply of U.S.-built cars for 1983-1987 was 69 days. The Big 3's average days' supply of domestic cars on Dec. 1 for those five years was 72. For imports, the average was 37.

Many dealers queried by Automotive News said they were "very comfortable" with their inventories. A Connecticut Ford dealer said he had a six-week supply of cars, and a New Jersey multi-store owner said he had about 65 days' worth of all his cars.

Dealers claim that incentives have been necessary because the customer has come to count on enticements. "Everytime they knock a program off, we get a lull," said Peter Griffin, owner of Griffin Ford and Griffin Putnam Buick in Greenwich, Conn.

Six of the seven U.S. carmakers reported heftier inventories than on Nov. 1.

GM's domestic stocks were equal to an 81-day day supply on Dec. 1, up slightly from 76 days on Nov. 1.

However, GM reduced its domestic stockpile significantly from last year's total which was equal to a worrisome 101-day supply of cars. November sales gains and a new round of inducements helped curtail GM's inventory numbers.

Ford's domestic stocks were 11.40 percent above last month's levels. Ford began December with a 77-day supply, up from a 62-day supply a month ago.

Several Ford dealers and Ray L. Windecker, Ford's director of research and analysis, were quite content with the Dec. 1 numbers. "We'd be happier with 75 days' worth of domestic cars, but it's not a point of concern until it reaches 80 days — 100 scares you," Windecker said.

Chrysler Motors' U.S.-built car stocks rose nearly 10 percent from Nov. 1, and it began December with a 72-day supply vs. 63 days' worth on Nov. 1.

Among the transplants, Toyota reported a slim 13-day supply, although its car stocks were nearly 40 percent higher than it month-earlier total of 17 days.

Honda began the month with a lean 15-day supply, even though its transplant stocks were slightly higher than on Nov. 1, when it had 16 days' worth of U.S.-built cars.

Mazda's supply of U.S.-built cars were slightly higher on Dec. 1. It had the equivalent of 58-days' worth of cars compared with a 46-day supply a month earlier.

Although Nissan's U.S.-built car inventories continued to climb, the Japanese carmaker began December with a 66-day supply of cars vs. 73 days' worth on Nov. 1. Nissan's sales strengthened in November.

The import car and truck stockpile on Dec. 1 grew to 783,528, a 67-day supply, up from 746,664, a 66-day supply a month ago. The import vehicle stockpile was up slightly from 778,720 a year ago.

Import-truck stocks rose to 156,454, equal to a 74-day supply up from 143,621 on Nov. 1, a 70-day supply.

PERSONNEL

FROM PAGE 29

George S. Bak, vice president, group supervisor on the Buick account. He joins the firm from Young & Rubicam where he was vice president, management supervisor on the Goodyear account.

Robert F. Lyons, vice president, associate creative director, assigned to the Buick and GMC Truck accounts. He joins the firm from Young & Rubicam, where he was vice president, creative director.

Dan A. Nearhood, senior art director. He joins the firm from Ross Roy, where he held the same position. He will work on Buick, GMC Truck and other accounts.

Gil Franceschi, senior art director, assigned to the Buick and GMC Truck accounts. He formerly had his own consulting firm, Ads Infinitum.

Susan L. Salatka, keyliner, assigned to the firm's McGraphic unit.

Dennis Romanoski, traffic coordinator, assigned to the GMC Truck and Champion Spark Plug accounts.

Morton Thiokol

George D. Lutz has been named vice president, industrial coatings, for Morton Thiokol Inc.

In his new post, Lutz will add the responsibility for the powder coatings group to his present position as president of Bee Chemical Co.

Plastigage/Gordon

Mira Miller has been appointed marketing manager for Plastigage/Gordon Plastics, and **Larry McLeskey** has been named division manager.

Miller has been with the company 10 years and most recently was sales coordinator.

McLeskey formerly was corporate quality assurance manager.

Rockwell International

Richard C. Quaid has been named vice president of South American operations for the on-highway products organization of Rockwell International's automotive operations.

He joined Rockwell in 19[illegible] most recently was general managing director of Braseixos S.A., Sao Paulo, Brazil.

Sherwin-Williams

George A. Higgins has been named director of sales and marketing for the automotive group of Sherwin-Williams Co.'s Chemical Coatings Division.

He formerly was vice president of sales for Seibert Oxidermo.

Pannier Corp.

Pannier Corp. has announced a reorganization plan and has named three executive vice presidents. They are:

Allan D. Schilling, sales and marketing. He formerly was vice president of sales for the Pittsburgh division.

John E. Visconti, manufacturing. He formerly was vice president of manufacturing of the Pittsburgh division.

David E. Gibbs Jr., finance and chief financial officer. He formerly was controller and vice president of finance.

SKF Bearing Industries

George Maddox has been named manager, applications engineering for the automotive business unit of SKF Bearing Industries, Detroit.

He has been with the company 31 years and most recently held the same position at SKF, United Kingdom.

Toyoda Machinery

Albert F. Kinzer has been named vice president — automotive sales for Toyoda Machinery U.S.A. Inc., Arlington Heights, Ill.

Kinzer joins the company from ITT Automotive where he was director of sales and marketing for Thomson Division's wheel, body trim and structural components.

Traffic Safety Now

Traffic Safety Now has reelected **Helen O. Petrauskas** chairperson. She is vice president of environmental and safety engineering for Ford Motor Co.

Charles L. Spilman has been reelected to the full-time position of president.

James D. Johnston has been renamed treasurer. He is vice president of industry and government relations at General Motors.

Marvin W. Stucky has been named secretary. He is executive director of regional affairs for Chrysler Motors.

TRW

James C. Leslie has been appointed vice president — engineering for the TRW transportation electronics division, and **Melvin J. Rachal** has been named vice president — operations for the TRW valve division.

Leslie joins the company from Chrysler Corp., where he was manager, wiring systems, engineering office.

Rachal formerly was director of manufacturing services for the valve division.

In TRW's steering and suspension division, **Ann R. O'Neill** has been named general superintendent for the plant in Sterling Heights, Mich., and **Mark G. Angolia** has been named named quality manager for that facility.

O'Neill joined the company in 1981 and most recently was a plant quality manager. She replaces **James Handysides**, who is now plant manager at the division's Greenville, N.C., plant.

Angolia joined the company in 1983 and most recently was quality engineering manager for the steering and suspension division.

Varta Batteries

Varta Batteries has announced several appointments. They are:

Craig E. Spafford, vice president — automotive sales. He joins the company from Midas Canada Inc., where he was director of wholesale operations.

Rod Wilkes, national sales manager. He formerly was Eastern Canada sales manager.

Bob Huta, sales manager — original equipment. He formerly was sales supervisor original-equipment/export.

Tom McGinn, national accounts manager. He formerly was sales supervisor national accounts.

VG Systems

Jack Delpit has been named vice president of sales for VG Systems Inc.

He joins the company from General Parametrics Corp., where he was director of sales.

Other suppliers

Roger G. Andrzejewski has been appointed director of human resources and **Jim Miller** has been named director of corporate communications for Lacks Industries, Grand Rapids, Mich. . . .

Ann Berry has been appointed manager of marketing communications for Samsung Semiconductor Inc. . . .

Louise Corsini-Green has been appointed research planner at Beurmann-Marshall Corp., Southfield, Mich. . . .

James B. Davis has been appointed chief financial officer of Ransburg Corp., Indianapolis. . . .

Gary Dickinson, vice president and group executive in charge of the technical staffs group at General Motors, and **Gino J. Giocondi**, vice president for quality and productivity at Chrysler Motors, have been named to the Metropolitan Center for High Technology in Detroit. . . .

Chuck Eckert has joined Carico Systems, Fort Wayne, Ind., as sales engineer. He will be responsible for the firm's automotive accounts in Indiana and Michigan. . . .

John G. Freihaut, vice president of sales operations at Siemens Energy & Automation Inc., Atlanta, plans to retire Jan. 1, 1989, after 32 years with the company. He will continue as a consultant. . . .

Allen R. Frydenlund has joined Charles River Associates, Boston, as a senior associate in the technology assessment program. . . .

Daniel G. Hackett has been named account manager, Western region, for Nuturn Corp.'s automotive products division, Smithville, Tenn. **Stephen K. Hammil** has been named automotive products division controller. . . .

Jorgen Hedenhag has been named general sales manager for Tymac Controls Corp. He formerly was national sales manager for Aquanetics Inc. . . .

Peter M. Holleran has been named chief chemist in the materials development laboratory of Kingston-Warren Corp., Newfields, N.H. . . .

John Paul Hoyer has been named corporate controller for Morgan Drive Away Inc. . . .

James G. Hutzel has been named manager — materials at Polymer Corp., Reading, Pa. . . .

Joan Jackson, senior public relations account manager at Keller-Crescent Co., has been elected to the Motor & Equipment Manufacturers Association's board of governors. . . .

Jerry Jaques has been named manager of marketing support for Sheffield Measurement, Dayton, Ohio, and **Jack Quinlan** has been named Sheffield's sales manager for North America. . . .

Mark McAleer has been named assistant sales manager for Sparkomatic Corp.'s Southern region. . . .

Peter Raider has been appointed floorplan manager of Lease Mart, Trumbull, Conn., a Bank Mart subsidiary. . . .

Andrew Salvatore has been named manager of production and inventory planning for Fedco Automotive Components Co., Buffalo, N.Y. . . .

Earl I. Seekins has been named vice president and general manager of the Flow Services Division of Flow Systems. The company makes ultrahigh-pressure waterjets and abrasivejets applications for industrial cutting and milling. . . .

K. Grahame Walker, president and chief operating officer of Dexter Corp., has been elected a director of Barnes Group Inc., Bristol, Conn. Barnes Group is the parent of Associated Spring.

Early-December sales drop 10%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Early-December domestic-car deliveries dropped 10.52 percent from the corresponding period of 1987.

Suggesting that the lower 10-day numbers might be misleading, auto analyst Michael Luckey of Michael Luckey Consulting Group Inc., Creskill, N.J., said, "Companies started to adopt major incentives at this time last year. Today's incentives are still pretty modest. The annual selling rate of 7.1 million is consistent with what we have seen since Oct. 1. Pricing was pretty steep on '89 models. The level of incentives will continue to grow."

This year, 167,438 U.S.-built cars were sold during the period, down from 187,126 in early December last year.

The latest period also was off 10.33 percent from last month's first 10 days, when 186,521 U.S.-built cars were sold.

The surge in last month's first-period sales was mainly due to a new batch of incentives.

In spite of early-December's downturn, calendar year-to-date sales of U.S.-built cars were 9,881,997, up 3.22 percent from 9,573,968 sold through Dec. 10 last year.

In early December, the daily selling rate was 18,604, 10.52 percent lower than last year's 20,792 rate. Both periods had nine selling days.

Only Honda, Nissan and Mazda reported gains over the year-ago 10-day period in sales of U.S.-made cars.

General Motors sold 10.29 percent fewer domestic cars in the first 10 days, with each of its car divisions reporting downturns.

Ford Motor Co. delivered 11.62 percent fewer cars than in the year-earlier period.

Although Chrysler Motors sold 10.29 percent fewer U.S.-built cars in the period, Dodge reported a 20.98 percent increase over early-December 1987.

Honda's transplant sales climbed 33.74 percent from last year and Nissan delivered 28.50 percent more U.S.-built cars in the period, while Toyota's transplant car sales fell 41.68 percent below last year's.

Mazda reported a threefold gain in sales of cars built at its Flat Rock, Mich., plant.

U.S. light-truck sales totaled 99,353 in early December, down 11.40 percent from 112,136 last year.

DOMESTIC SALES

	Dec. 1-10, 1988	Dec. 1-10, 1987
Eagle	933	453
Chrysler	5,764	9,103
Plymouth	5,751	7,663
Dodge	11,608	9,596
Chrysler Motors	24,056	26,814
Ford	34,934	40,401
Mercury	11,122	11,917
Lincoln	4,181	4,523
Ford Motor Co.	50,237	56,841
Buick	11,782	14,629
Cadillac	5,953	8,060
Chevrolet	33,290	37,958
Oldsmobile	14,084	15,557
Pontiac	15,043	15,832
General Motors	80,152	92,036
Volkswagen	—	873
Honda	9,358	6,997
Nissan	1,966	1,530
Toyota	1,086	1,862
Mazda	583	173
U.S. Ind. Total	167,438	187,126

Nissan was the only U.S. truck maker to report an increase: 24.13 percent more than in the year-earlier period.

Ford's light-truck sales slid 21.65 percent. Chrysler sold 6.79 percent fewer light trucks, and GM reported a 5.21-percent drop.

Combined sales of U.S.-built cars and light trucks for the first 10 days were 266,791, down 10.85 percent from last year's 299,262.

In the first 10 days, the Big 3's combined domestic-car and light-truck totals declined 8 to 16 percent. Nissan was the only U.S. vehicle maker to report an overall increase; its combined sales rose 25.99 percent.

CAFE

FROM PAGE 3

standards. Both companies have said they would like the level rolled back to 26.0.

NHTSA has denied both requests on grounds it does not have statutory authority to do so. Both companies have challenged that position in an enforcement case brought by NHTSA against Mercedes before a Transportation Department administrative law judge.

Daniel Head, the judge hearing the case at the Transportation Department, will not only decide on the authority question, but also whether Mercedes must pay $5.5 million in civil penalties for failing to meet the 1985 standard.

NHTSA wants Head to allow it to collect the fine since the 1985 CAFE standard was and is expected to be 27.5 mpg. The agency says its denial of the Mercedes and GM petitions was within its discretion and "administratively final."

It also maintains that changing any CAFE standard retroactively would be an "abuse of its discretion" and make NHTSA itself subject to court action. Moreover, retroactively changing a CAFE standard is not consistent with earning and applying credits both forward and backward.

Mercedes has taken the position that the administrative enforcement procedure should be stayed because NHTSA might still amend the CAFE standards if ordered to do so by the court of appeals. And any change resulting from CAFE adjustment litigation would also change the company's liability for civil penalties, Mercedes said.

According to Mercedes, only if the Court of Appeals agrees with NHTSA that it cannot retroactively roll back standards will the law judge need to consider the legal issues raised by it.

GM, also differing with NHTSA over its interpretation of the law, says the CAFE law does not explicitly ban the agency from retroactively changing the standard, adding that if Congress had intended to prevent NHTSA from doing so, it would have said so in the law.

GM cites a 1975 House report that says the mechanism for reviewing the standard prior to enforcement was "not intended to exclude review."

GM feels that was the law's intent "since Congress recognized that CAFE standards set long in advance of their effective date might eventually prove unattainable."

OBITUARIES

Edward L. Williams

ROYAL OAK, Mich. — Edward L. Williams, 62, retired director of community relations at Chrysler Corp., died Dec. 8. He was with Chrysler from 1955 to 1981.

R.O. Evans

DALLAS — R.O. Evans, 71, owner of R.O. Evans Pontiac-GMC Truck, died Nov. 30. He opened his dealership in 1961 after 12 years as a Buick dealer in Kauffman, Texas.

Wade Sherrard

SACRAMENTO, Calif. — Wade Sherrard, 83, retired managing director of the California Trucking Association, died Nov. 20.

Wallace J. Brinkmann

ST. LOUIS — Wallace J. Brinkmann, 60, president of King Dodge and president of the St. Louis Automotive Association, died Nov. 16.

NEWTON, Mass. — Harriet R. Abramson, 57, co-founder of Silver Lake Dodge, died Sept. 13. Her husband, Herbert R., continues to operate the dealership, which they opened in 1960.

Trucks top four million for 1st time

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers built their four-millionth vehicle of the year last Wednesday, marking the first time annual truck output has reached that figure.

The previous record was 3,880,342 in 1987.

Year-to-date, 4,044,537 units have been assembled, 7.65 percent more than the 3,757,241 completed last year at this time.

Truck output was slated at 93,779 units last week, 3.05 percent below the previous week's 96,725 but 12.41 percent more than the year-ago week's 83,429.

Last week's targeted auto production of 167,998 was slightly above (0.31 percent) the prior week's 167,477 and 29.81 percent more than the year-ago week's 129,420.

The year-ago week's output was affected by downtime at four plants for inventory adjustment and equipment changes.

So far this year, 6,937,597 cars have been assembled, slightly below (0.19 percent) the 6,950,630 completed last year at this point.

Companies split last week's scheduled car output as follows: General Motors, 47.96 percent; Ford Motor Co., 26.00 percent; Chrysler Motors, 16.13 percent; Honda of America Manufacturing Inc., 4.46 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.88 percent; Nissan Motor Manufacturing Co. U.S.A., 1.36 percent; and New United Motor Manufacturing Inc., 1.21 percent.

GM scheduled overtime last Saturday at its Lordstown, Ohio, car plant and its Flint, Mich., and Pontiac, Mich., truck plants.

Overtime was slated last Saturday for the following Ford plants: Wixom, Mich.; Lorain, Ohio; Wayne, Mich.; Kansas City, Mo.; Norfolk, Va.; Louisville, Ky.; and St. Louis.

All car and truck plants will close Dec. 23 for the Christmas holiday. Plants are scheduled to resume operations Jan. 4.

Millionth car built in Canada

Canadian automakers built their one-millionth car of the year last Wednesday. Auto production did not reach one million last year. The last time it topped that figure was 1986, when the full-year total was 1,073,312.

So far this year, 1,009,850 cars have been built, 27.98 percent more than the 789,052 completed last year at this point.

Scheduled production of 17,883 cars last week was a few units above the previous week's 17,866 but 19.74 percent below the year-ago week's 22,280.

Truck output was estimated at 20,965 units last week, 1.73 percent below the previous 21,334 but 11.11 percent more than the year-ago week's 18,868.

Year-to-date, 914,394 trucks have been built, 13.37 percent more than the 806,553 completed last year at this time.

All car and truck plants will be closed from Dec. 23 until Jan. 4 for the Christmas holiday.

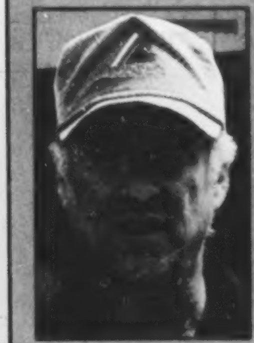
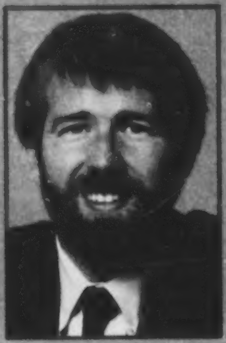
1988 Newsmakers of the Year



Malcolm Bricklin: Entrepreneur got $20 million for his interest in sagging Global Motors, then vowed to return to auto industry by raising $1 billion to buy a group of dealerships.



John Campbell: California dealer sold half interest in eight lines — including GM's Saturn, Ford and Nissan — to Britain's Lex Service, becoming first U.S. dealer selling stake to a public company.

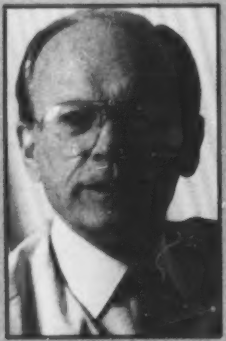
Norimasa Furuta: Mazda's new president engineered major financial turnaround in first year on job, with sales in Japan recovering, supplier efficiency improved and new product successes.

Vittorio Ghidella: Flamboyant Fiat Auto president negotiated joint venture with Chrysler, a deal in Poland, and then abruptly quit amid internal battle over political power and corporate policy.

Gerald Greenwald: Chrysler vice chairman caused furors closing Kenosha plant and putting Acustar on — then off — the block, but established Fiat deal and became Lee Iacocca's heir apparent.

INSIDE: The Year in Review

H. Ross Perot: GM's perennial irritant hired away dozens of EDS employees for a new business, which won U.S. postal deal that GM sued to cancel, in wave of legal-personality battles.



Donald Petersen: Backed new Ford attitude that led to Continental, Probe and Thunderbird product successes, another year of record profits and the beginnings of a joint venture in Russia.

Ralph Sarich: Managing director of Australia's Orbital Engines produced modern two-stroke engine, which many manufacturers touted as a milestone for powering future small cars.

Robert Stempel: Took hold as GM president and prominent spokesman, overseeing big recovery in Europe, surge in trucks, signs of future product improvements — as sales-profits rebounded.

Ron Tonkin: NADA's outspoken president-elect set strong tone for dealer-factory relations, proposed merger of NADA and AIADA, and personally applied to become U.S. Lada distributor.

Global eyes foreign aid from Yugo

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Negotiations are reportedly under way for the manufacturer of the Yugo subcompact to buy a substantial portion of Global Motors from the private investors who bought out founder Malcolm Bricklin earlier this year.

Zavodi Crvena Zastava, the Yugoslavian parent company of the car's builder, Zastava Yugo Automobili, is seeking to purchase a stake in Global from the investors led by the Wall Street firm of Mabon, Nugent, which last April paid $40 million to obtain the majority share of the distributor.

Meanwhile, the company abruptly pulled out of upcoming auto shows in Washington, Detroit and Chicago, saying it does not have the new product or staff to make a credible showing at all three.

One of Yugo's top 10 dealers, Sidney Oko, owner of Liberty Buick in Libertyville, Ill., said dealers have been told Zastava will purchase "a major share" of the Mabon, Nugent investment, though probably not a majority interest.

"I'm real excited about it. It eliminates a certain amount of middleman," he said.

"Mabon, Nugent just bought it as an investment, to make money by selling shares to investors. They had no real interest in it other than to make money. The Yugoslavians have a real national pride in it, and they want to make it in the American market. Now they're putting their money where their mouth is," Oko said.

The Mabon, Nugent group bought out auto entrepreneur Malcolm Bricklin's 70 percent interest in Global Motors last spring.

Since then, the group is thought to have motivated the ouster of Global Motors President and CEO William Prior last month and numerous layoffs at the company headquarters.

Anthony T. Ciminera, executive vice president for product planning for Global subsidiary Yugo America, last week said he couldn't comment on the purported negotiations.

And Mabon, Nugent officials have failed to return repeated telephone calls for over a month.

However, Global Motors is clearly in trouble.

Hot cars scarce

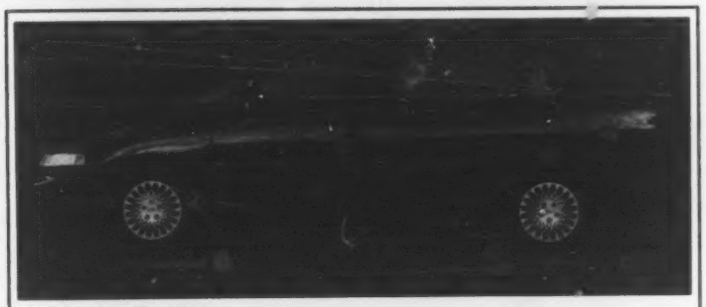
As T-bird, Cougar go on sale

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. launches its new Thunderbird and Cougar models today — hoping to capitalize once again on a date that has brought magic in the past.

But customers anxious to get their hands on the supercharged versions of the specialty coupes will likely be in for a wait.

Production of the Thunderbird Super Coupe and Cougar XR-7 continues at a trickle, in part because of earlier concerns about the durability of engine crankshafts. Ford found that a high percentage of the cast crankshafts it planned on



Lumina's unveiling
The 1990 Chevrolet Lumina all-purpose vehicle will be among six vehicles the automaker introduces at the North American International Auto Show next week in Detroit. The front-wheel-drive APV is available with seating for seven, and offers modular seats that are individually removable for a variety of seating combinations.

2 VWoA executives die in plane crash

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

On the eve of Volkswagen's 40th anniversary as an importer — a year it hopes will mark a turnaround for the U.S. franchise — two top officers were killed last week aboard Pan Am flight 103.

James Fuller, vice president in charge of Volkswagen United States, and marketing director Lou Marengo were returning from VW meetings in West Germany when the jet crashed in Scotland Wednesday.

More than 250 people died, including at least one other auto executive, Greg Kos-

German profits reflect sales difficulties in U.S.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Preliminary 1988 results released by Daimler-Benz, Volkswagen and Audi reflect the continuing difficulties of West German manufacturers in the United States.

The rise of the mark against the dollar has squeezed profit margins in the slumping luxury-import segment in which Mercedes-Benz and Audi compete.

Daimler-Benz Chairman Edzard Reuter said 1988 group earnings will be "satisfactory," but he cited increasing price competition and lower sales in the United States.

Reuter didn't give a profit figure, but said Daimler will pay a dividend of 12 marks per 50-mark share, unchanged from last year. Afterwards, Daimler's share price fell in trading on the Frankfurt Stock Exchange.

Several analysts have predicted that Daimler's 1988 net profits will decline slightly because of problems in the passenger-car sector. Last year, Daimler-Benz reported net profits of 1.78 billion marks ($1.02 billion).

Daimler said it expected sales in the United States to decline 8 percent in 1988 to 84,600 units. Mercedes sales in Europe this year are about even with 1987.

Total Mercedes car production will fall 6 percent in 1988, to 560,000 from 598,000 in 1987. The decline is traced to a 14 percent drop in production of diesel models and aging S-class sedans, which have come under intense competitive pressure from BMW's 7 series.

Daimler-Benz said it expects group revenue to increase 8 percent in 1988 to 73 billion marks ($41.9 billion), with most of the gain attributable to its booming commercial-vehicle operations.

VW said worldwide group revenue will increase 8 percent in 1988 to about 59 billion marks ($33.9 billion), but cited "a very difficult market situation" in the United States due to "the unrelenting competitive price war".

Through the first 11 months, VW brand sales in the United States were down 10.11 percent to 158,685.

Despite the sales drop, VW last month reported an improved financial picture in the United States. In 1987, VW's U.S. operations absorbed a 380 million mark ($218 million) extraordinary loss for closing the Westmoreland, Pa., assembly plant and showed an overall loss of 572 million marks ($328 million). Most analysts believe sufficient provisions to cover the Westmoreland closure were made last year and that VW should return to the black in the United States in 1988.

VW said this month that 1988 group profits will be higher than the 598 million marks ($343 million) earned in 1988, but did not elaborate. In September, VW Chairman Carl Hahn predicted that group earnings would rise at least 9 percent for the full year. VW's nine-month earnings were up 7 percent to 419 million marks ($240 million).

VW confirmed that Seat, the Spanish automaker it acquired in 1986, has achieved its first profit in 11 years in 1988, but did not quote figures. Seat Chairman Juan Antonio Diaz Alvarez has said the company expects to make a net profit of about 1.8 billion pesetas ($16 million) in 1988, compared with a loss of 3.3 billion pesetas ($27 million) in 1987 and a deficit of 27.4 billion pesetas ($222 million) in 1986.

VW also said this month that its Autolatina joint venture with Ford in South America showed "considerable progress" in 1988. In November, VW said losses at Autolatina have been reversed this year.

VW's Audi unit said that net earnings as a percentage of sales rose to 3 percent from 1.8 percent in the first 10 months of 1988, but it did not detail financial results.

Audi's worldwide sales revenue for the period increased 1.9 percent to 9.41 billion marks ($5.4 billion). Unit sales edged upward to 353,600 from 350,800 despite a sharp decline in the United States. Audi said 11-month sales in the United States fell 45.20 percent from 39,486 to 21,637.

The company's West German sales were off 12 percent, to 156,400, in the first 10 months, but rose 30 percent to 153,200 elsewhere in Europe.

IT'S CLOSE

Fiat, VW slug it out for lead in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Fiat Group and Volkswagen AG will go down to the wire in their race for first place in European new-car sales for 1988.

With another record year of more than 12 million car sales assured in Europe, all eyes are on the battle between Fiat and VW. The Italian group has led the entire year, though VW began a comeback last summer.

VW has followed the same pattern as in 1987 when it came from behind to catch Fiat. However, the West German market has stalled in recent months, slowing VW's surge to the top.

After three years as No. 1, VW trailed Fiat by 14,200 units and one-tenth of a percentage point in market share, 14.7 to 14.8 percent, for the 11-month period.

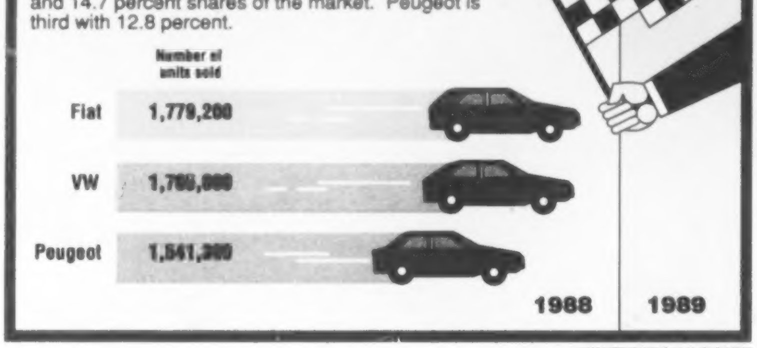
In November, VW outsold Fiat by 8,200 units — 152,100 to 143,900 — the fourth straight month in which VW has bested Fiat.

Overall, Western European sales in November were 1,001,200, a 4.4 percent gain over last year, according to industry estimates compiled by Automotive News. Sales for the year-to-date are 12,032,900 units, 4.4 percent ahead of last year's record pace.

The November increase followed a 5 percent decline in October that some analysts reckoned was the beginning of an expected downturn. However, many industry executives don't think sales will decline until the second half of 1989. November's figures supports that opinion.

Europe's 1988 sales race

After 11 months, Fiat and Volkswagen are nearly tied for European sales leadership with respective 14.8 and 14.7 percent shares of the market. Peugeot is third with 12.8 percent.



AUTOMOTIVE NEWS / [illegible]

"I hope we keep snow-plowing (the expected decline) even further into the future," said Ford of Europe President Louis Lataif in a recent interview. "The first quarter still looks OK."

Meanwhile, as Fiat and VW go at it hammer and tongs, the importance of being No. 1 in Europe is debated. It is clearly a morale-booster and can be used in advertising. But its tangible benefits are suspect.

"There is really not much benefit for the companies but it is nice to know you're No. 1," said Sanjay Dabysing, an analyst with DRI-Europe.

Fiat and VW have made European sales leadership a two-company race through acquisitions. In 1986, VW bought the Spanish automaker Seat, while Fiat acquired Alfa Romeo.

Peugeot SA has actually recorded the biggest sales gain this year among Europe's six volume manufacturers, gaining 11.3 percent to 1,541,300 through November. That was good for a 12.8 percent share. Aided by the new 405 compact, the group has 35 percent of the French market.

Fiat group sales, including Fiat, Alfa and Lancia, totaled 1,779,200 through the first 11 months, up 7.5 percent from 1987. Fiat increased sales with its new Golf-fighting Tipo, recently named European Car of the Year.

Fiat also has been aided by a robust Italian market, which in November surpassed 2 million units for the first time. Fiat group nameplates control just under 60 percent of Italy's market.

Capri ragtop delayed again; price to climb

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — The small Capri convertible that Ford Australia plans to build for the U.S. market has run into further delays and may not be seen until 1990.

And recent strengthening of the Australian dollar means that the car will not be as competitively priced as Ford had hoped when it announced the project.

A Ford Australia source said his company has all but given up hope of having the car ready for its most recent target date, September 1989.

Even Christmas 1989 is "touch and go," the source said, adding that the most likely date for the Capri to reach U.S. showrooms is early 1990.

When Ford announced its plans three years ago, the Australian dollar was worth around 70 U.S. cents.

This month, the Australian dollar rose to around 88 cents before settling in the mid-80s. That means the Capri is unlikely to be as competitively priced in the United States as Ford had originally planned.

Publicly, Ford Australia Managing Director Bill Dix remains confident about Capri's launch, but he declines to comment on the delay.

"The car will be released when our testing tells us it is right," he said. "It is taking a little longer due to the requirement to put in air bags, but we will get everything right."

All cars sold in the United States beginning with the 1990 model year must be equipped with some form of passive restraints.

Even before passive restraints became an issue, the front-wheel-drive convertible was behind schedule because of a series of manufacturing and quality-control problems experienced with the launching of Ford's new sedans for the Australian market.

Ford Australia introduced three completely new models during 1988 — the Falcon EA and two long-wheelbase derivatives called Fairlane and LTD.

The production of those cars was far more taxing on the company's resources than anticipated. Ironing out the production glitches took precedence over the Capri project. Also, demand for the Falcon has outpaced supply, and the production level for that car is likely to be kept low to keep quality levels up. With Ford Australia and GM's Holden subsidiary fighting for the top spot in the full-size four-door market, Ford does not want to compromise quality, profits or market share for a U.S.-only sportster.

In addition to all of the above, the requirement that all Capris sold in the United States be fitted with passive restraints has pushed the Capri's release date back "at least six months," the Ford source said.

Already, a number of Capris have been barrier-tested without air bags.

The Capri is based on Mazda 323 mechanical components and is designed to offer a variety of power-train combinations.

Ford Australia has geared up to produce 32,000 to 35,000 cars each year for the United States and about 5,000 right-hand-drive Capris for the local market.

Fiat, Peugeot to hike Sevel van output

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Fiat S.p.A. and Peugeot S.A. plan a major investment aimed at sharply increasing output of light-utility vans produced by the companies' Sevel joint venture.

A Fiat official said most of the new output likely will be for passenger use rather than commercial vehicles.

The two automakers will spend 3 billion francs ($498 million), divided equally, to reopen a mothballed Peugeot car plant in Valenciennes, France.

Further unspecified sums will be spent to enlarge the existing Sevel (Societa Europea Veicoli Leggeri) plant in Val di Sangro, Italy, as well as to convert an Alfa Romeo components factory in Pomigliano, Italy, to van production.

Sevel's current annual production of 121,100 units will be about doubled by 1994 or 1995.

Val di Sangro now produces 500 units daily, while Pomigliano builds 50 commercial vehicles per day as well as components. The Pomigliano plant will be switched to commercial-vehicle output exclusively.

"Altogether, the three plants will be producing over 1,000 units per day," a Fiat spokesman said.

The existing joint venture, which was formed in 1978 and reached full production in 1982, produces vans up to 3.5 metric tons. They are badged as Fiat Ducato, Peugeot J5 and Citroen C25.

The models are basically the same design but use different engines and transmissions, provided by each of the producers. Passenger vans make up about half the output.

The pact to expand the joint venture was signed last week in Turin by Peugeot Chairman Jacques Calvet and Fiat Auto Managing Director Cesare Romiti.

There was widespread speculation last week that Fiat and Peugeot plan to use the Sevel venture to develop a small passenger van to compete with the Renault Espace, Plymouth Voyager and other minivans slated for the European market. However, a Fiat spokeswoman in Turin denied such plans.

"There is no paranoia about any particular model," she said. The expansion is intended to broaden the range of van products below 3.5 metric tons.

"These vans are doing very well," said another Fiat official in Turin. "They are small, flexible and handy. The market has increased about 17 percent in Italy this year and there is a lack of capacity."

The spokeswoman said such partnerships make good sense in the face of Europe's planned 1992 market unification.

Christmas cheer, Ford style

Above, eight-year-old Tiffany and auto worker Gwen Boynton head for the cashier with bags of Christmas gifts. Tiffany and 27 other children jammed shopping bags with gifts that were paid for by hourly and salaried workers at Ford's Dearborn, Mich., stamping plant. For the past three years, plant employees have donated money and time to bring Christmas happiness to youngsters temporarily in foster homes. This year, workers collected nearly $6,000. At right, Tiffany meets Dearborn stamping plant workers during a plant tour.

Metal experts rally around platinum

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

While world metals markets digested the impact of a new Ford Motor Co. catalytic converter that doesn't use platinum, experts cautioned that the traditional catalyst would remain the primary one used to turn pollutants into harmless materials.

But those experts added that the concentrations of platinum and other precious metals now commonly used in catalytic converters are likely to be juggled according to the requirements of the countries where they are used.

Earlier this month, Ford's announcement that it had developed a catalytic converter that does not require platinum sent prices of platinum and other precious metals plummeting worldwide.

Ford is producing the new catalytic converter in a pilot program for 40,000-50,000 1989 Thunderbird/Cougar models that will be sold in the California market.

A Ford source familiar with the program said the new device uses a combination of palladium and rhodium — both mined along with platinum — and cerium, an abundant element.

James H. Kennedy, manager of mid-sized specialty car development engineering, said Ford will utilize the new technology in future car models, but its introduction will occur slowly and will be timed to the certification of new engines.

Manufacturers of catalytic converters say platinum will continue to be prominent as the catalyzing agent in all countries where catalytic converters are being used, but the high purity of unleaded fuel in the United States and Japan has allowed engineers to use more palladium, which is less expensive.

Unleaded fuel in Europe is more likely to be contaminated than unleaded fuel in the United States and Japan, according to John J. Mooney, manager of technical services for Engelhard Corp.'s environmental catalysts group. He said this makes platinum more effective because it is more resistant to the harmful effects of lead on the operation of a catalytic converter.

In the Far East, where there is little danger of lead contamination in gasoline, about 25 percent of catalytic converters use a combination of palladium and rhodium, according to Engelhard.

But Johnson Matthey, a Great Britain-based major manufacturer of catalytic converters, said there has recently been a move away from systems in Japan that used palladium and rhodium to platinum- and rhodium-based three-way catalysts.

Johnson Matthey called Ford's announcement about its non-platinum catalytic converter technology "exaggerated and inconsistent with the technical possibilities," and predicted that platinum will remain the prime metal used in catalytic converters.

Mooney agreed, saying combinations of the three platinum group metals are likely to continue to be used in domestic units.

Juergen Strutz, head of the catalyst department at W.C. Heraeus Gmbh, a precious metals supplier and catalytic converter manufacturer located in Hanau, West Germany, said, "We are not so disturbed over the Ford announcement. What we see is that this Ford idea is an old one. We see technical advantages in using platinum and rhodium."

But the experts disagreed on the potential supply of platinum and platinum group metals.

The supply of platinum, though influenced to some extent by political considerations — South Africa and the Soviet Union have the largest deposits — is not short, Strutz said. He said South Africa is looking for new platinum markets.

However, Johnson Matthey is forecasting a 1988 supply shortfall of 465,000 ounces of platinum and a continuing deficit during the next few years.

Palladium and rhodium are found in the same mines as platinum. The concentration of palladium may be greater or less than that of platinum, but the cost of palladium is about one-fourth that of platinum.

Rhodium, found in smaller concentrations than either platinum or palladium, sells for more than twice the price of platinum, but only minute amounts are used in catalytic converters.

FORD BULLISH: *Economist Zimmerman sees 15.4 million sales for '89*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. is again donning its rosy forecast glasses, estimating that U.S. consumers will take home 15.4 million new cars and trucks in 1989.

While that outlook might subject Ford to charges of wishful thinking, chief economist Martin Zimmerman pointed out that the company's sanity was questioned last year at this time, too.

In the wake of the October 1987 stock market crash, Ford countered the prophets of doom by pegging 1988 sales at the then-ambitious mark of 15 million.

Now, as the U.S. industry heads toward a 15.7-million-unit year, Ford's forecast has turned out to be too cautious.

Zimmerman suggested in a recent interview that the economy would do well by cooling down in the coming 12 months.

This year's surprising growth rate of 3.7 percent, as measured by gross national product, is pushing the economy to its limits and brewing some potentially strong inflationary pressures, he said.

If the economy continues growing at a 3 percent clip or more, Zimmerman expects the Federal Reserve Board again to tighten reigns on the money supply. After the middle of 1989, if tighter money does keep growth in check, interest rates should begin falling, he said.

There is no compelling reason for a recession to occur just because the current expansion has carried on for six years, according to Zimmerman.

He said one of the top priorities of the Bush administration should be to trim the federal budget deficit.

"The budget deficit is not going to drive us off the cliff next year," he said. "But it's the kind of thing that's important if you want to put into place policies for sustained growth in the economy."

Zimmerman said the most desirable remedy would be to cut government spending.

"If we are forced to go to tax increases, then the way we should go is a consumption tax," Zimmerman said. "The last thing you want to do is tax investment."

He said he would support a tax on gasoline as part of such a plan. But he believes the idea of a 50-cent-per-gallon tax would be too much too soon.

Zimmerman said he believes consumers will remain generally optimistic in 1989 — as long as unemployment is low, the economy is growing and interest rates aren't climbing.

The big potential worry is inflation. He's predicting a 5 percent rise as measured by the Consumer Price Index in 1989.

Too steep a rise would trigger steps to slow down the economy and "derail the trajectory" of growth, he said.

As for Ford, Zimmerman believes the company is in a position of strength because it's building nearly 20 percent of its vehicles on overtime.

That means the company could absorb a significant slowdown without laying off workers and idling plants, he said.

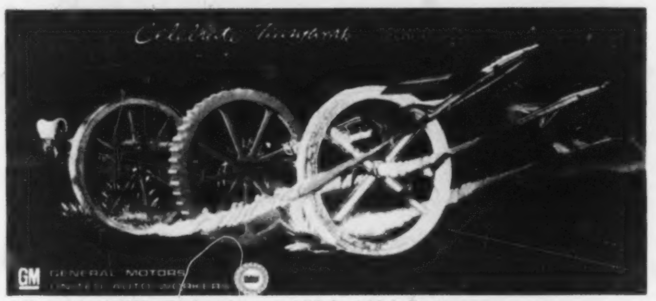
GM and UAW join forces on Rose Bowl float

PASADENA, Calif. — To highlight their commitment to teamwork, General Motors and the UAW will jointly sponsor a float in the 100th Tournament of Roses parade Jan. 2.

It will be the parade's first float sponsored jointly by a corporation and a union.

The 75-foot-long and 35-foot-high float, entitled "Teamwork and Technology," depicts America's progress in transportation over the last 100 years. GM and the UAW kicked off a similarly titled show in New York earlier this year.

The GM/UAW float features three large rotating wheels defining the three eras of modern transportation: a wagon wheel, a gear and a space station. Other scenes include a Conestoga wagon, steam engine, helicopter, jet plane, satellite and futuristic car.



GM and the UAW's 75-foot-long and 35-foot-high float

Several GM divisions supplied components for the float. The outer structure will be supported by a chassis built by members of UAW Local 157 at the truck and bus group's Detroit assembly plant.

A 454-cid V-8 engine, built by Local 774 members at the Chevrolet-Pontiac-Canada Group's Tonawanda, N.Y., plant, will power the 25,000-pound float. Delco Remy Division will provide the battery, and the float's hydraulics will operate off a Quad-4 engine built by Local 652 members at the Buick-Oldsmobile-Cadillac Group's plant in Lansing, Mich.

The three 15-foot wheels will revolve on a 50-foot shaft. They are suspended over a 28-foot motorhome chassis developed into a custom see-through frame.

The engine was selected because of its heavy-duty cooling ability, which is important because of the low float speeds and stop-and-go movements.

Workers at C-P-C's Van Nuys, Calif., plant and from other GM facilities in California have volunteered to complete the floral exterior.

The original concept for the float was proposed by employees at the Van Nuys plant and UAW Local 645, who then sought a parade invitation and later received funding from the UAW and GM.

The float was designed and constructed by veteran float-builders C.E. Bent & Son, the largest float-builder in the parade.

Sales head for record

1988 total will be close to 5.2 million

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truck sales continued their record-setting pace in November, assuring a total of nearly 5.2 million for calendar 1988.

Industry sales, including light, medium and heavy trucks, totaled 4,785,912 through November, up 5.14 percent from 4,551,892 in the year-earlier period.

November sales of 401,122 were up 5.72 percent from 379,413 a year ago.

The Class 3 light-duty, Classes 4 and 6 medium-duty and Class 8 heavy-duty segments are the big winners this year.

Class 7 sales recorded a small increase, and Class 5 was off slightly for the first 11 months of 1988.

Ford has been the driving force behind Class 4 sales, which skyrocketed from a mere 1,317 in 11 months of 1987 to 19,595 for the same period in 1988.

General Motors and Chrysler, eyeing the success of Ford's Class 4 Super Duty models, have expressed interest in fielding competitive units in that segment, which is projected to be the fastest-growing in the truck industry during the next five years.

As indicated by Class 5 sales, which managed to hold up fairly well, most of the Class 4 buyers are coming from the light-duty truck segment.

Generally, they are people who previously had to overload a 12,000- to 14,000-pound GVW unit to get the job done.

Eleven-month sales of Class 5 vehicles totaled 7,531, according to the Motor Vehicle Manufacturers Association, off only 80 units from 7,611 a year earlier.

Class 6 has grown sharply, with sales of 49,507 for 11 months of this year, up 24.26 percent from 39,842 a year ago.

New Japanese companies have been the main driving force in that segment.

So far this year, Class 7 has been a big disappointment to the many heavy-truck manufacturers that field so-called "Baby 8" trucks in that segment.

Eleven-month Class 7 sales of 94,790 were up slightly from 93,849 a year ago.

Class 8, with 134,382 sales for 11 months, was up 12.19 percent from 119,782 a year ago, heading for its best performance since 1979.

Driver comfort accented in Navistar's new models

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NEW ORLEANS — Navistar International Transportation Corp. unveiled its 1990-model heavy and medium trucks with a new commitment from a new top executive to build vehicles that are more responsive to the users.

The new comfort-loaded lineup consists of 11 heavy-duty models in two categories and 11 new medium-duty models in three categories. The 1990 models go on sale early in January 1989.

The line has standardized a number of features designed not so much for performance as for driver comfort, according to Roy S. Roberts, Navistar's new vice president and general manager of truck operations.

The package includes:

- A single-piece molded fiberglass hood and grille, designed to reduce internal cabin vibration by as much as 50 percent.
- Increased wheel cut for greater maneuverability.
- Wider cabs with more shoulder room.
- An 18-inch two-spoke steering wheel to improve instrument panel visibility.
- A new "Euro-look" dash panel with larger gauges and instruments.
- High-back seats to reduce driver back strain.
- Modular, color-coded electrical wiring for easier electrical troubleshooting.

"Our goal is to be responsive to the end user," said Roberts, a former General Motors vice president who took over the truck operations four months ago.

"Our customers are telling us that attracting drivers and keeping them happy is a crucial issue. They do that in part by offering a well-built, comfortable truck to drive. Driver comfort has become a big issue in this business," he added.

The new heavy-duty line includes seven 2000-series 112-inch bumper-to-back-of-cab models and four 8000-series 96-inch and 112-inch models.

The medium truck line consists of two new 3000-series bus chassis models; seven 4000-series pickup, delivery, utility, construction and refuse trucks; and two 7000-series tandem-axle straight trucks.

The new models replace the International S-series design the company introduced in 1978.

According to Mark Schwabero, general manager of medium-truck products, the new design is the result of "thousands of interviews with drivers, mechanics, service supervisors, private fleet owners — the entire spectrum of the truck transportation industry."

Approximately 40 percent of Navistar's truck sales are from individual buyers.

In conjunction with the new-product launch, the company plans a direct-mail marketing campaign to reach 250,000 potential buyers with product information.

Navistar spent almost $80 million on research and development last year, much of which has resulted in the 1990-model changes, according to Roberts.

"Innovation is obviously important to us," he said. "This is a mature industry.

"One of my goals here is to help create an environment of risk-taking. Through risk-taking and innovation, if we're attuned to the people who use our product, we should be able to grow in the market," he added.

Despite the enthusiasm, Navistar officials concede the company is expecting a downturn in unit sales for the coming year — both for Navistar and the industry as a whole.

1988 STORY OF THE YEAR

General Motors' apparent turnaround is named *Automotive News* Story of the Year in close balloting among editorial staffers

By John K. Teahen Jr.

General Motors, the auto industry's slumbering giant, showed signs of awakening, and the corporation's new posture was voted the Story of the Year for 1988 in the 36th annual *Automotive News* editorial staff poll.

It was a significant turnaround from 1986, when the top story was "A time of turmoil at GM." That turmoil included plant closings, a drop in market share, a scaling-back of the Saturn project and the spin-off of bus and heavy-truck operations.

This year's vote was much closer than in 1987, when Chrysler Corp.'s purchase of American Motors was the runaway winner.

The runner-up spot for 1988 went to a story that is likely to intensify in 1989: The growing financial difficulties of huge auto dealerships, both chain operations and individual outlets.

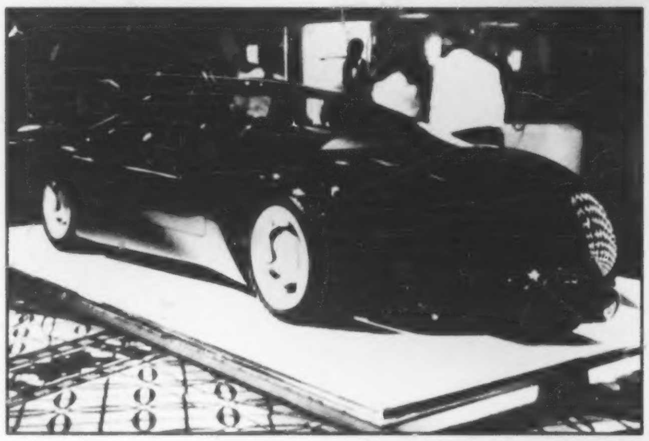
In third place was a sigh-of-relief story — the auto collapse that didn't happen. A year ago, the auto industry, like the rest of the economy, was reeling from the Oct. 19 stock market crash. To put it mildly, the industry was worried about the sales outlook for 1988.

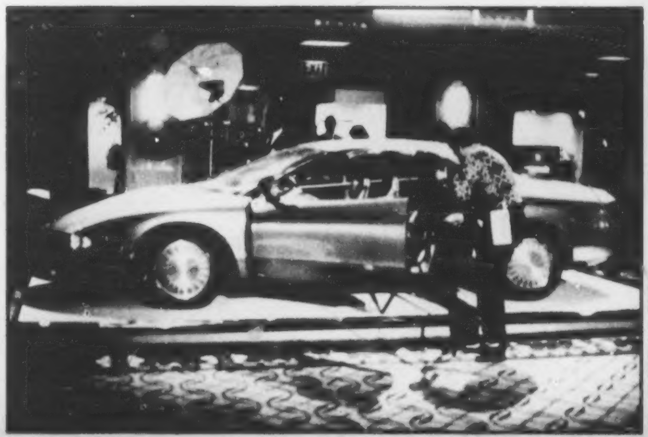
The fears proved groundless. Auto sales have recorded a tidy gain this year, and truck sales have chalked up another record.

But everything wasn't coming up roses on the U.S. sales scene. The fourth-place story was the continued effect of the weak dollar on imported-car sales in this country. High-priced European cars have suffered the most. Sales are down for 10 of the 11 makes in that class.

In fifth place was public ownership of auto dealerships. Judging by activities in 1988, it's an idea whose time has not yet come. A publicly held British firm acquired 50 percent of a California chain, but a Kansas operation was unsuccessful in its bid to sell stock to the public.

Continued on page E6





The "Teamwork and Technology" extravaganza, held last January at the Waldorf Astoria in New York, was General Motors' answer to charges of look-alike cars. Rather than exhibit far-out styling exercises, GM took the unprecedented step of showing the public its product plans for the not-too-distant future. Charles M. Jordan (above), vice president of GM's design staff, stands alongside the Cadillac Voyage, which received rave reviews. Other highly acclaimed cars were the Pontiac Banshee (left) and Buick Lucerne (below).

GM Stirs

General Motors has taken its lumps, both in the media and in the market, in the last few years. Its marketing strategy has been questioned; its look-alike cars have been criticized; it was beaten in profits by Ford Motor Co. in 1986 and again in 1987. And its share of the U.S. car market fell from 42.49 percent in 1985 to 36.45 percent in 1987.

Bashing GM has been popular and, to a great extent, justified.

But in 1988 the sleeping giant stirred and may be about to awaken.

Last January the corporation took the unprecedented step — for GM — of showing the public its product plans for the not-too-distant future. Its Teamwork and Technology exhibit opened in New York and drew good reviews there and in other cities in which it was staged.

The vehicles displayed were not far-out styling exercises like the Motorama cars of old. They were an answer to look-alike charges.

Indeed, some distinctive models are already in the showrooms. Chevrolet's Corsica and Beretta do not ape the products of other GM divisions. Reatta is Buick's alone. Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal are built off the same GM10 platform, but the desired differences are there.

There has been progress in other areas, notably earnings. Third-quarter profits totaled an industry record $859 million, of which $805 million was operating profit. GM topped Ford for the quarter, a definite rarity in the last three years. GM also expects to share some of the wealth with its 450,000 U.S. hourly and salaried workers in the form of profit-sharing payments averaging $200. The last time the automaker gave out profit-sharing checks was 1985.

Market share has stabilized. GM's car sales (including captive imports) accounted for 36.15 percent of the U.S. total in the first 11 months of this year. That was down from 36.75 percent a year ago, but GM lost 1.50 percentage points in 1986 and 4.54 percentage points in 1987.

Light trucks are a bright spot. For the first 11 months of this year, Chevrolet was 111,000 units behind Ford; a year ago, Chevy was 211,000 behind. Combined, Chevrolet and GMC continue to lead Ford in light-truck sales.

Production costs have been reduced, although GM's costs are still the highest of the Big Three U.S. automakers. Quality has risen, and GM's component divisions, threatened only a year ago with massive closures, have improved their competitive positions.

Some of GM's newest automated plants — initially plagued by high-tech gone haywire — are finally running efficiently.

Capital spending is declining. Much of it was for new or modernized facilities, and that work has been completed.

European operations have contributed much to GM's financial comeback. After losing $2 billion from 1979 to 1986, GM-Europe posted a profit of $1.25 billion in 1987. Pre-tax earnings will be higher this year, although the net may slip because of a bigger tax bite.

GM's cost-cutting efforts have been tough on GM's people. Plant closings have trimmed the number of hourly employes, and 40,000 white-collar workers have faded away.

GM isn't completely out of the woods yet. Its high costs and anemic (for GM) market share are insomnia producers for corporate leaders. GM predicts it will gain 1 percentage point of market share in both cars and trucks during the 1989 model year. It seems to be a realistic goal, although it will leave the corporation far behind the car penetration it had as recently as 1985.

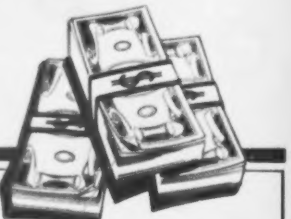
More plant closings appear to be in the offing as GM strives to boost its utilization of production capacity to 100 percent by 1992. The current rate is 75-80 percent.

The economy is another question mark. GM plans to introduce a host of new products in the next year or so, and new products fare best in a strong economy.

But the awakening giant may soon become the fierce competitor it was before its mid-1980s siesta.

Ford continued to outearn General Motors during the first half of 1988, but when the third-quarter figures came in, GM's profits topped Ford's, $859 million to $856 million (see table below). Much of GM's recent success can be attributed to its distinctive new products, such as the L-body Chevrolet Corsica and Beretta (left). Combined, Corsica and Beretta were GM's No. 1 sellers during the 1988 model year.

BIG 3 RESULTS



THIRD QUARTER
(In millions of dollars)

	1988		1987	
	SALES	PROFIT	SALES	PROFIT
Chrysler Corp.	$ 7,014.8	$ 112.5	$ 6,168.6	$ 246.0
Ford Motor Co.	$ 17,728.7	$ 856.3	$ 15,246.8	$ 703.2
General Motors	$ 25,041.3	$ 859.2	$ 22,606.9	$ 812.3
TOTAL	$ 49,784.8	$1,828.0	$ 44,022.3	$1,761.5
NINE MONTHS				
Chrysler Corp.	$ 23,174.5	$ 616.6	$ 18,610.1	$ 939.5
Ford Motor Co.	$ 60,859.2	$4,142.3	$ 52,885.5	$3,693.0
General Motors	$ 81,378.6	$3,458.0	$ 75,403.6	$2,715.1
TOTAL	$165,412.3	$8,216.9	$146,899.2	$7,347.6

Dealer Problems

The past year has not been a banner period for a lot of mega-dealers and large individual outlets, and those difficulties captured second place in this year's voting.

Continued on page E8

Chrysler TC by Maserati voted Flop of the Year

UAW's blockage of Acustar sale is named Coup of the Year for 1988 by editorial staff

By John K. Teahen Jr.

For the second year in a row a car has been designated the Flop of the Year by the *Automotive News* editorial staff.

The 1988 choice is the Chrysler TC by Maserati, a $30,000 convertible that was scheduled to debut in early 1987. Delay followed delay, and the first shipment of cars arrived from Italy in mid-December, nearly two years late.

Said one staff member, "At the rate it's going, the car will be five years old before it hits the showroom."

The 1987 Flop of the Year was the Cadillac Allante, which fell far short of the sales projections made by Cadillac executives.

Chrysler also figured in the 1988 Coup of the Year, although not in a manner the corporation will find heartening. The staff's choice for 1988's Coup was the UAW forcing Chrysler to drop its plans to sell Acustar, the corporation's components-manufacturing operation.

Looking ahead, the staff pointed to a number of events that could become 1989's Story of the Year. Among them were a shakeout in the import makes sold in this country; an agreement for Ford to build vehicles in the Soviet Union; and an escalation of rebates and other incentives — "marketing madness," in the words of one staffer — in a slower sales year.

The first load of Chrysler's TC by Maserati finally arrives in the port of San Francisco (above). The car will be distributed first in California, then other markets.

JOE WILSSENS

The UAW protests the sale of Acustar, Chrysler's partsmaking subsidiary, outside Chrysler's Highland Park, Mich., headquarters in February.

While the tardy Chrysler TC by Maserati was the clear-cut selection as Flop of the Year, it wasn't the only event mentioned. Yugo's problems and the failure of Steven Motors Inc.'s attempt to sell stock to the public also were listed.

So was Chrysler's handling of the attempt to sell Acustar, sort of a reverse twist to the staff's Coup of the Year pick.

One staff member believed General Motors' 1986 buyout of Ross Perot should be the Flop of the Year for 1988, reasoning that Perot is still haunting GM by luring away employees of GM's Electronic Data Systems and by competing with EDS for contracts.

In the Coup of the Year balloting, Malcolm Bricklin and Ford Motor Co. were close behind the UAW's blocking of Chrysler's sale of Acustar.

Bricklin was cited for bailing out of faltering Global Motors (Yugo) with $20 million. Ford was applauded for the Probe and the Continental, two more successes in its string of new-product launches.

Also on the product side, Nissan's product turnaround was noted.

For 1989, the editorial staff expects a shakeout in the import market with Yugo and high-priced European makes feeling the pressure.

Akin to that is the upcoming debuts of the Toyota Lexus and Nissan Infiniti. Some voters questioned the chances for success of the new Japanese luxury cars in a crowded market.

Staff members predicted an increase in dealer financial problems during 1989 and an increase in incentives as sales falter.

GM's continuing comeback was mentioned, but some look for more plant closings. A major 1989 story, said one staff member, will be "GM closes two plants, catches hell, closes two more."

Also at GM, a staffer suggested that there will be more management shifts (there were a ton of them in 1988) as the corporation signals who will be top dog when chairman Roger Smith retires in 1990.

The production situation in the U.S. auto industry was listed as one of the things to watch in 1989 as the automakers attempt to rationalize their capacity to build hot-selling models with the demand for those vehicles.

In 1987, Chrysler Corp. purchased American Motors. One editorial staffer's crystal ball finds Chrysler on the other end of the acquisition process in 1989. He predicted "the Story of the Year will be the leveraged buyout of Chrysler Corp. by a Wall Street finagler. It will happen in October." ■

STORY OF THE YEAR

Continued from page E6

Financial problems have piled up, forcing some dealers out of business and others into bankruptcy.

In some cases, it seems that their reach was greater than their grasp. Poor planning and/or inadequate management also played a part.

This year saw the end of the chain of 10 dealerships in New Jersey headed by the husband-wife team of Richard and Virginia Pepe. The chain filed for bankruptcy, and the dealerships were sold at auction. The auction brought some $30 million, but that sum was expected simply to cover the debts.

In the Dallas area, General Motors Acceptance Corp. assumed control of Jim Johnson Chevrolet, the nation's largest retailer of Chevrolet vehicles in 1987. The dealership's debts were estimated in the $10- to $15-million range.

Grand Chevrolet of Glendora, Calif., filed bankruptcy papers and ran into licensing problems. A federal bankruptcy judge ordered the state Department of Motor Vehicles to restore its license, but the financial woes remained for the large Los Angeles-area dealership.

GMAC repossessed the GM inventory of Kelton Motors, a Vermont chain that also includes Chrysler Motors, Nissan, Volvo, Isuzu, Freightliner and Volvo GM Heavy Truck franchises.

Thomas J. Price, owner of Chrysler-Plymouth City in Spokane, Wash., filed for bankruptcy. A Washington bank has sued the dealership, claiming default on a promissory note.

The list is expected to grow in 1989.

No Collapse

Remember Oct. 19, 1987? Wall Street does, and not fondly. More than 600 million shares were traded on the New York Stock Exchange that day, and the Dow Jones Industrial Average plunged 508 points. The stock market was also devastated in other countries.

As 1988 began, the U.S. auto industry still wasn't sure what effect the collapse of the stock market would have on new-vehicle sales. Would the economy shake off Oct. 19, or would it be another year like the recession period early in this decade?

Those questions have been answered, and the auto industry is smiling. Those smiles were the basis of the third-place story in this year's poll.

This year's new-car sales are estimated at 10,567,000, up 3.34 percent over last year's 10,225,304. U.S.-built cars paced the gain. The 1988 projection is 7,497,000 versus 7,081,262 in 1987. Imports will finish 1988 at about 3,070,000, down slightly from last year's 3,144,042.

The truck story is even better. This year's sales are expected to total a record 5,175,000, an increase of 4.27 percent over last year's 4,962,938, the current peak.

The results were excellent in other lands as well. Western Europe expects 12.7 million car sales this year, far ahead of the record 12,260,202 registered in 1987. And Japan has enjoyed a year-long car-sales boom.

Import Blues

This year's sales reports weren't cheery for all car brands sold in the United States. The weak dollar continued to buffet big-ticket European imports, and that was the fourth-place selection in the *Automotive News* staff vote.

Through November, 10 of the 11 high-priced European cars trailed their 1987 sales totals. The only gainer was Mercury's Merkur line, which was buoyed by the Scorpio four-door. Scorpio was up 83 percent, while the XR4Ti coupe fell 38 percent. The overall gain was 6 percent.

The in-the-red sales totals ranged from dips of 6.18 percent for Mercedes-Benz and 6.90 percent for Jaguar to 35.77 percent for Austin Rover Sterling and 45.20 percent for Audi. Audi is fighting the unintended-acceleration controversy as well as the weak dollar.

In between the highs and the lows, there also were declines of 9 to 35 percent for Volvo, Saab, BMW, Peugeot, Alfa Romeo and Porsche.

Among Japanese makes, there have been gains and losses. Acura recorded an 11-month sales increase of nearly 20 percent; Mazda's imports went up 10 percent; Toyota's imports rose 9 percent; and Mitsubishi climbed nearly 3 percent.

Honda's sales of imported cars were down, although its combined import-transplant total rose. There were declines for Nissan, Subaru, Isuzu and for the Chevrolet and Chrysler captives. Korea's Hyundai was off for 11 months, but only by 0.55 percent.

The weak dollar is not a 1988 phenomenon. The exchange rate has brought sizable increases in imported-car prices during the past three years, and sales are feeling the effects of those hikes. Stiffer competition from the domestics is also a factor.

Public Ownership

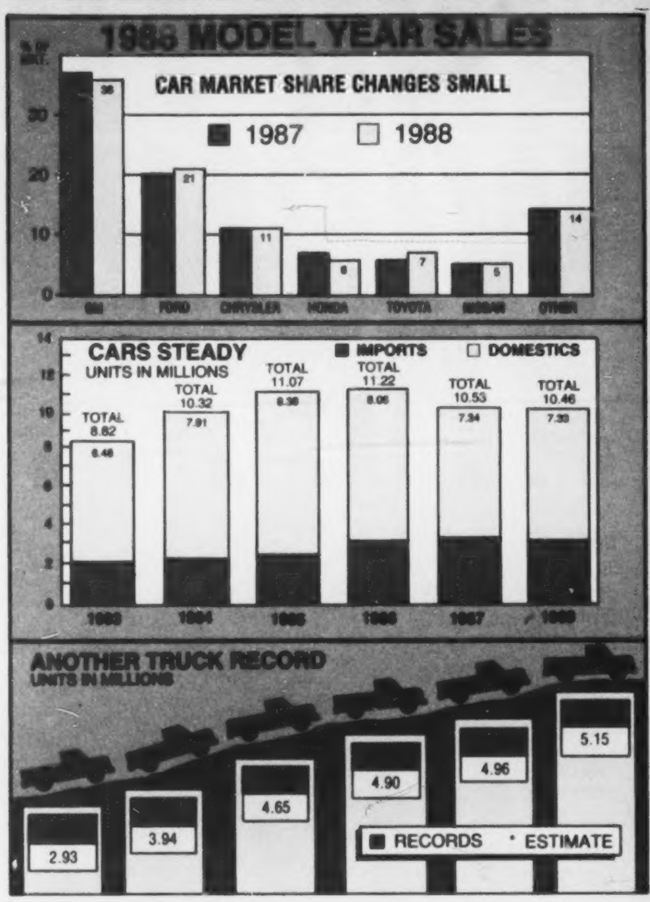
Public ownership of auto dealerships is a hot topic in the industry, and the 1988 developments in that area won fifth place in the 1988 poll.

The debate is lively, and public ownership seems destined to grow, but there is no groundswell yet. Only one chain of dealerships is involved so far. Great Britain's Lex Services purchased 50 percent of the Campbell Group in California this year.

On the other hand, Steven Motor Co. of Wichita, Kan., failed in its bid to sell stock to the public.

The public ownership concept received a boost last spring when GM dropped its opposition to the idea. Ford approved the Lex-Campbell hookup (Campbell holds a Ford franchise), but a Ford Division official denied that the approval marked a change in Ford policy.

He said Lex-Campbell was not direct public ownership because a holding company owns the dealership — 50 percent Lex and 50 percent Campbell.



LANCE GRAVES

MECHAM
PONTIAC
RENAULT

JESSE SNYDER

Taking third place in Story of the Year balloting was the auto collapse that didn't happen. After the stock market crash of October 1987, the auto industry was worried about sales in '88. The fears proved groundless, however, because 1988-model-year car sales remained steady, and trucks chalked up another record (see table above). The year 1988 also saw many large dealerships go belly-up, and that story took second place in Story of the Year voting. Impeached Arizona Gov. Evan Mecham was forced to sell his dealership in Glendale, Ariz. (left). Mecham's sales slumped after he was accused of financial irregularities involving campaign funds.

Past Stories of the Year

A synopsis of winners since the annual feature's inception

Following is a list of winners of the Story of the Year designation since *Automotive News* inaugurated this annual feature in 1953:

1953 — Fire destroys General Motors Hydra-matic plant in Livonia, Mich.

1954 — Reduction of "phantom-freight" charges.

1955 (tie) — The Senate hearings on auto trade practices. Attainment of supplemental unemployment compensation by the UAW.

1956 — GM's five-year dealer franchise.

1957 — The rise in imported-car sales.

1958 — Enactment of the price-sticker law.

1959 — Compact cars introduced by Ford, GM and Chrysler.

1960 — Chrysler Corp.'s conflict-of-interest problems.

1961 — Antitrust actions filed against the Big Three. GM accused in discount-house rhubarb; Ford's acquisition of Electric Autolite properties questioned; Chrysler charged with pressuring dealers not to dual with Studebaker.

1962 — Future of the franchise system: Los Angeles antitrust suit against GM viewed as threat to franchise.

1963 — GM wins criminal antitrust suit growing out of Los Angeles discount-house situation.

1964 — Record truck sales and the first 8-million-car year.

1965 — "The Year of Records": All-time highs in sales and production of domestic cars and trucks.

1966 — Safety: Congress holds hearings; bills are passed; Dr. William Haddon appointed safety czar; proposed standards for 1968 models announced.

1967 — Labor: 61-day strike costs Ford a half-million cars; Big Three workers get raise of about $1 an hour in wages and fringes over three-year period.

1968 — Semon E. Knudsen is named president of Ford Motor a week after he quits as executive vice president of GM.

1969 — Semon E. Knudsen fired as president of Ford Motor after holding the job for 19 months.

1970 — UAW strike shuts GM for 67 days in United States, 95 days in Canada. Costs GM more than 1.5 million cars and trucks (production), more than $4.5 billion in sales.

1971 — President Nixon's economic program and its effect on the auto industry. Price-wage freeze; import duty hiked temporarily; currency revaluation; repeal of excise tax. Program touches off auto sales boom.

1972 — Wankel engine advances. GM to offer Wankel-powered Vega in 1975 model year. Other makers watch and wait. Mazda, only Wankel-powered car in United States, has big year.

1973 — The energy crisis: Becomes a major problem late in year. Arabs halt oil imports to United States. Gas rationing feared, or maybe federal tax of 40-50 cents a gallon. Uncertainty of situation hurts auto industry and entire U.S. economy.

1974 — Year-long sales slump: New-car sales (U.S. and import) fall to 8.9 million in 1974. The 1975 model year is off to a dismal start with high prices a big factor.

1975 — U.S. makers pay cash rebates of $200 to $500 to customers to move huge inventories, mostly small cars. Chrysler starts the program.

1976 — Sales rebound after two poor years, top 10 million for 1976. Major turnaround in marketplace — intermediates and big cars are hot; small cars, especially subcompacts, are hard to sell.

1977 — Air bags ordered on new cars, to be phased in starting with 1982 models. Industry, others fail in bid to have Congress override Department of Transportation decision.

1978 — The fall and rise of Lee Iacocca. Fired by Henry Ford II as president of Ford Motor in mid-July, he becomes president of Chrysler in November.

1979 — Chrysler's financial agony; federal loan guarantees sought; future of company in doubt.

1980 — GM, Ford, Chrysler and AMC suffer combined loss of $4.2 billion for the year. Even GM is in the red.

1981 — Another recession/depression year for the domestic auto industry.

1982 — The DeLorean Saga: John DeLorean arrested on drug-trafficking charges. His sports-car company folds.

1983 — A year of recovery for the domestic auto industry. Sales and production rise after three bad years.

1984 — Record profits for each of the Big Three and a record profit of $9.8 billion for the four domestic auto manufacturers.

1985 — Big Three on a buying binge. GM, Ford and Chrysler make major non-automotive acquisitions. Biggest is GM's $5-billion purchase of Hughes Aircraft.

1986 — A time of turmoil at GM: Market share dips; plants to close; Saturn scaled back; plastic-body Camaro-Firebird plans dropped; bus operations for sale; Volvo to run heavy-truck venture; company has third-quarter operating loss of $338 million.

1987 — Chrysler buys American Motors.

1988 — The sleeping giant stirs: GM's profits rise; car-market share stabilizes; new models not look-alikes; quality improves; overseas operations in high gear. ■

AROUND THE WORLD

Vauxhall to build new paint shop

By Daniel Ward
STAFF CORRESPONDENT

LONDON — General Motors has finally given the go ahead for Vauxhall, its United Kingdom subsidiary, to invest £56.3 million ($102 million) in a new paint facility for Vauxhall Astra models badged as Opel Kadetts in Europe.

For more than a year, it has been clear that a new paint shop was needed at the Ellesmere Port plant, near Liverpool, in order to modernize it in line with the new £90 million ($163 million) facility at its Luton sister plant and Opel's factories in Europe.

However, for months Vauxhall's top management has delayed the Ellesmere Port investment.

Speaking in Detroit earlier this year, GM President Robert Stempel warned that "some consistent earnings and quality" would be needed in the United Kingdom before GM makes a decision on future investment policy.

Stempel said in 1987 that Ellesmere Port had achieved its best-ever quality and productivity with quality close to German levels.

Further improvement at the factory — which previously had a poor reputation because of a militant labor force — and improving profitability at Vauxhall is understood to have won the investment. Vauxhall has forecast that this year's profits will triple to at least £100 million ($181 million).

The United Kingdom government will provide £8 million ($14.5 million) in regional aid for the project, which is expected to be completed by August 1990.

The new facility will enable the plant to apply new paint finishes, such as pearlescent, as well as improve overall quality. The new paint shop will be phased in without disrupting production because it will be located in a former components plant adjacent to the existing plant.

This year, the plant will build 120,000 Astras and Astra-based light-duty vans, which are sold under the Bedford badge.

Ten years of financial losses and the difficulty of shaking off a poor image for productivity and quality have meant that Vauxhall received only a modest share of GM's huge European investment program.

Of an annual total of £552 million pounds ($1 billion) during much of the 1980s for European operations, GM invested £122 million ($220 million) at the Luton assembly plant during the last three years. The investment included retooling for the new Cavalier/Vectra model. Another £85 million ($154 million) has been spent at Ellesmere Port.

SALES

FROM PAGE 2

VW group sales, including VW, Audi and Seat, came to 1,765,000 through November, 2.8 percent ahead of last year. That was due to a 4.1 percent gain by Audi to 337,700 and an 11.5 percent increase by Seat to 263,200.

VW group sales were off 6.3 percent to 745,800 in the West German market where it leads with just under 29 percent of sales.

Ford, hurt by a 12-day strike in the United Kingdom last February, was off 0.6 percent for the year at 1,375,400 units. Through November, it held an 11.4 percent market share in Europe, down from 12 percent last year.

General Motors ranked fifth with 10.6 percent penetration on sales of 1,275,600, an increase of 3.3 percent. Renault was sixth with a 10.1 percent share. Its sales slipped 0.2 percent to 1,209,400 in the first 11 months.

Through November, BMW was the best performer among Europe's specialist brands. Sales increased 22.4 percent due to strong demand for the new 5 series. BMW's market share after 11 months was 2.8 percent, up from 2.4 percent a year earlier.

Combined Japanese volume kept pace with overall growth of the new-car market in Europe, keeping talks of further restrictions in check. Japanese sales improved 4.2 percent to 1,359,300 and combined market share remained at 11.3 percent, the same level as 1987.

Among national markets, West German sales declined 3.9 percent in November and were off 3.1 percent for the year compared with a record 1987. But Germany remained Europe's largest new-car market, with volume totaling 2,586,900 units through the first 11 months.

The United Kingdom's sales expanded 10.5 percent year-to-date to 2,123,900, breaking the 2 million mark for the second straight year. November sales were up 5.8 percent.

Italian sales rose 9 percent during the month. The overall market was up 8.5 percent to 2,021,700. French sales climbed 6.7 percent in November and were up 3.4 percent year-to-date to 1,961,600.

The Spanish market rose 11.7 percent in November, keeping the country's nearly three-year-old car sales boom alive. Eleven-month sales were 15.4 percent above last year at 969,000 units — on the verge of going over 1 million cars for the first time.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	Jan-Nov. 1988	Change vs 1987
West Germany	2,586,900	− 3.1

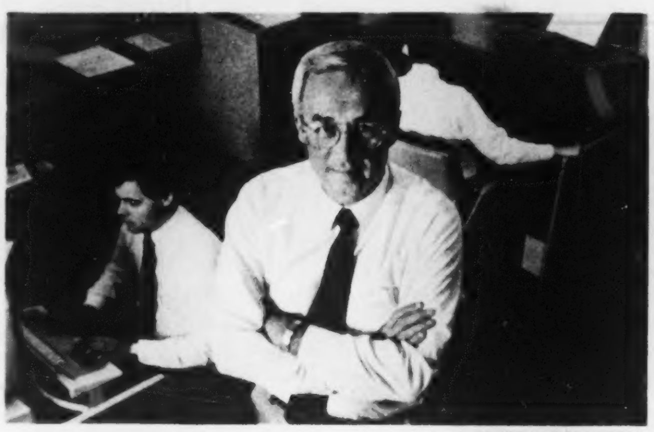
Kordick: Doing unto others . . .

Ford VP retires, heads to hospice

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER



Joe Kordick, Ford's unconventional vice president
AUTOMOTIVE NEWS/JOE WILSSENS

DEARBORN, Mich. — Nearly four years ago Joe Kordick took over as head of Ford's parts and service unit with a style and agenda that inspired a cultural revolution within what was once the Rodney Dangerfield of Ford divisions.

Two weeks ago, the 57-year-old Kordick left Ford Motor Co. to take care of dying cancer and AIDS patients, lending his own definition to the idea of Florida retirement.

Much of Kordick lore tends to focus on his personality. But in an interview earlier this month, he judged his record as general manager. The report card, in essence, says parts and service has made some impressive strides — and has a long way to go.

Kordick actually stayed at Ford longer than he'd expected. When they heard of his plans to do hospice work, Chairman Donald Petersen and Vice Chairman Harold Poling managed to talk him into staying another year. Kordick agreed — as long as they didn't press the issue again. They didn't.

They respected his wishes in another way. Kordick said his greatest achievement at Ford was convincing management that parts and service's No. 2 man, Lee Miskowski, should succeed him. Typically in the past, the job would have gone to someone outside the division. Miskowski was not named a vice president, however. Kordick has held that title since mid-1987 and believes it is important that his successor get it, too.

"If he were not made a vice president at some point in the near term, it would send a message to the dealers that we are not as important as the vehicle divisions, which is not the message I think the company wants to send."

Kordick describes Miskowski as a clone in terms of management style, and someone who will be able to pick up where Kordick left off. He estimates that when he took over, about half of Ford's 5,600 dealerships had an attitude that put their customers first. Kordick wasn't surprised: "For 40 years we treated dealers like dogs." Today, he pegs the number of well-intentioned dealers at 95 percent.

The other part of the equation — having the ability to carry out those intentions — will be left to Miskowski. It could well be the more challenging task, requiring an attention to detail that Kordick admits he doesn't have. Among the goals is eliminating repeat repairs, handling repairs more quickly and always having replacement parts available.

One might be tempted to dismiss Kordick's talk of progress as hyperbole if he weren't so frank about Ford's trouble spots.

How many executives, after all, say publicly that the salaries of auto executives are unconscionably high? How many tell a reporter that the chairman of Ford has been pressing his managers too heavily lately when he should be praising them?

"That isn't the way this company has grown great," Kordick said. "He has not leaned on us (in the past); he has led us. I'm excited by what he has done, but I'm very nervous that we not go into the mode of becoming defensive."

Kordick still believes Ford is on track to providing the industry's best service — and best vehicles — by 1992. Yet he leaves with a list of unfulfilled ambitions.

He wishes he'd done a better job of convincing people to be patient. Meaningful change takes time, he said, and there's still too much of a temptation to resort to quick fixes.

He also said he wanted to build a stronger relationship between parts and service and the sales divisions — even though he sees some encouraging trends. Someday, he hopes to see leaders of the sales division have a parts and service job on their resumes. "This is where taking care of customers happens, and it's just critical that they get exposed to this process," he said.

While Miskowski will be free to follow his own agenda, some of Kordick's customs may be imbedded as tradition by now.

Kordick made personal calls to his employees when they celebrated significant anniversaries with the company. Over the years, more than 220 people have taken him up on his invitation to bring their personal problems to him: "I've had people commit their lives to Jesus Christ here. Funny things have happened."

Twice a week he meets with a dozen employees over coffee. Since he took the post in February 1985, more than 2,200 people have sat with him.

Kordick looks on his new calling as a job transfer. For 34 years he has worked for Jesus Christ at Ford, he explained. Now he will work for Christ at the Hospice of Martin County. He has promised he will give 80 hours a week to the program, just as he has to Ford. He won't be paid for his service.

His training starts Jan. 3. He's aware that hospice workers can burn out when they are constant companions to people who are facing death. He said that if he decides to leave, "I hope that I can develop a competence in the process that I could either write a reasonably compelling book or maybe go around to other men and try to convince them that they're needed in hospice — that it's all right for men to be compassionate."

In the meantime, television will record his career change. NBC cameras followed him during one of his last days at Ford. They'll catch up with him in Florida and film him again for a segment scheduled to be broadcast on the "Today" show next year.

Shop volume climbs for month and year

By Wes Raynal
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume at new-car dealerships increased in September over the year-ago month and also was up for the first nine months of 1988.

In September, shop volume rose 2.5 percent over last year's, according to the Automotive News Service Index. Year-to-date shop volume was up 5.5 percent over 1987.

Though the number of repair orders written was down for both September and year-to-date (6.1 and 0.3 percent, respectively), gross profit on all labor and parts sales was up 6.8 percent for September 1987 and 7.7 percent for the first nine months of this year.

Several dealers attributed the volume increase to service specials run during the month.

"When things started to cool off, we needed to do something to keep volume up," a Midwest service manager said.

Meanwhile, a service manager in the Northwest said service volume was up throughout his area.

Labor sales (customer paid and warranty) were up 3.8 percent in September over a year ago and were up 6.0 percent over the 1987 year-to-date period.

Parts sales on repair orders were up 4.6 percent in September over September 1987, and were up 6.7 percent for nine months.

Total parts sales — including over the counter — were up 3.7 percent in September and 7.6 percent for the year to date.

SERVICE INDEX
102.5*

	Sept., '88 vs. Sept., '87	9 mos., '88 vs. 9 mos., '87
Gross Profit on All Labor and P&A Sales	+6.8%	+7.7%
Repair Orders Written	−6.1%	−0.3%
Total Labor Sales (Customer & Warranty)	+3.8%	+6.0%
Shop Parts Sales (Customer & Warranty)	+4.6%	+6.7%
Sales of All P&A...........	+3.7%	+7.6%

* Survey by Automotive News shows that dealers' service and parts business in September 1988 was 102.5 percent of business in September 1987. Service business in the first 9 months of 1988 was 105.5 percent of business in the corresponding period in 1987.

Mitsubishi expands regional net; adds offices in Florida, Texas

By John Wisely
SPECIAL CORRESPONDENT

Mitsubishi Motor Sales of America has expanded its national network with the opening of regional offices in Dallas and Metrowest, Fla., an Orlando suburb.

The Dallas facility handles training, sales and distribution for the Southwest region of the United States, while the Metrowest location provides the same functions for the Southeast.

The two offices are Mitsubishi's third and fourth regional facilities. Mitsubishi also operates offices in Bridgeport, N.J., for the Northeast, and in Cypress, Calif., for the Western United States.

A fifth regional facility is planned for the Chicago area. Mitsubishi will lease office space there beginning Feb. 1. Construction of a permanent facility will begin in 1990.

Mitsubishi is also planning a 126,000-square-foot parts distribution center in Atlanta. The company already operates parts facilities at Bridgeport and Cypress. The Atlanta site is expected to be completed in April.

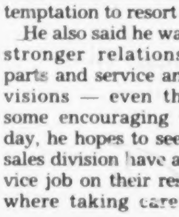
The recently competed Cypress facility also is home to a research laboratory, an engineering center, a design studio and the U.S. subsidiary's headquarters.

The complex, which covers 140,000 square feet, cost $20 million, and will eventually employ 475 people. Part of the complex has been leased to Gray Advertising, Mitsubishi's ad agency.

The expanded regional office network will enable Mitsubishi to gear up for the higher volumes expected as it begins to sell the Eclipse, produced at Mitsubishi's Diamond-Star joint venture with Chrysler. Eclipse, which goes on sale in January, will be handled by all Mitsubishi dealers.

Olds sets up toll-free number to take consumer queries

SHOP
TALK



WES RAYNAL

Oldsmobile will launch its customer-assistance center next March, providing a toll-free telephone number to answer questions about the division.

Oldsmobile said callers will be able to ask product questions, and the center's employees will be trained to handle questions about serviceability, or simply requests for information.

The program will begin in Eastern U.S. regions and spread westward until it is national. Olds officials hope to have the program operating throughout the United States within 15 months after start up.

The center is being developed by GM's Electronic Data Systems, which will staff the operation with 100 employees. Olds personnel will manage the center, which will be open rom 8 a.m. to 5 p.m. (Eastern Standard Time) Monday through Friday.

Kenneth E. McCourt, general director of technical service on GM's customer sales and service staff, will be the center's general director.

Chevrolet, Pontiac, Buick and Cadillac offer similar programs.

Transmission franchises

Automotive Franchise Corp. of Nashville, Tenn., has begun a pilot program that gives current operators of Mr. Transmission shops an opportunity to open additional centers.

The partnership-expansion program consists of joint ownership as a full partner in additional outlets with Automotive Franchise, allowing current franchise holders to expand without a "heavy financial investment."

The owner/operator receives financial assistance from the corporation as well as help with site location, construction of the facility and personnel selection, the company said.

An operator has five to seven years to buy out the corporation's interest.

Last October, Automotive Franchise Corp. began marketing its Mr. Transmission shops to car dealerships. The concept enables three or four dealers to purchase or start a Mr. Transmission shop, allowing them to do their heavy repair and transmission work in the facility.

Get TOWED

Century, a manufacturer and operator of tow trucks and recovery equipment in Ooltewah, Tenn., is the corporate sponsor of TOWED (Towing Operators Working to Eliminate Drunk Driving).

TOWED, which offers holiday-season transportation to over-imbibers, started in 1986 with 16 towing operators. For the 1988 holiday season, Century has commitments from more than 1,000 operators nationwide. The company predicts the operators will take at least 40,000 people home safely, giving them free tows and rides home if they don't think they can drive.

Paul Gallagher, Century president, said, "We just want to offer people a positive way to avoid hurting themselves and others."

PRODUCTION

Car output moves past 1987 total

U.S. car production inched past the 1987 year-to-date total last week for the first time this year.

Not only did car output pass last year's total, but automakers built their seven-millionth car of the year last Tuesday, two days ahead of 1987.

According to Automotive News estimates, 1988 calendar-year car output of 7,102,157 cars is 1.13 percent more than the 1987 running total of 7,022,521.

Last week, automakers wound up 1988 production with scheduled assembly of 164,039 units, 2.66 percent below the prior week's 168,519 but more than double the year-ago week's 75,333, which was a three-day work week due to the holiday.

Last week's targeted output was split this way: General Motors, 48.53 percent; Ford Motor Co., 25.74 percent; Chrysler Motors, 15.79 percent; Honda of America Manufacturing, 4.54 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.94 percent; New United Motor Manufacturing Inc., 1.23 percent; and Nissan Motor Manufacturing Co. U.S.A., 1.23 percent.

After breaking several monthly production records during the year, truckmakers ended 1988 with their highest year's output ever, surpassing the previous record set in 1987.

Automotive News estimates 1988 calendar-year truck production at 4,127,849 units, 8.40 percent more than the 1987 running total of 3,807,934.

Scheduled truck production of 83,634 last week dipped 10.51 percent from the previous week's 93,457 but rose 70.65 percent above the year-ago week's 49,008.

Chrysler's Kenosha, Wis., plant closed permanently last week. Dodge Omni and Plymouth Horizon output will be moved to the Jefferson Avenue plant in Detroit in January, and the Dodge Diplomat, Plymouth Gran Fury and Chrysler Fifth Avenue models have been discontinued.

All car and truck assembly plants closed last Friday for the holidays. They will reopen Jan. 3.

Canada trucks set output mark

Canadian truckmakers set a calendar-year record this year with an estimated build of 933,992 units. This year's total surpassed the previous record of 845,528 set in 1985 and was 14.27 percent above the 1987 running total of 817,320.

Truck production last week was targeted at 19,386 units, 8.46 percent below the previous week's 21,177 but 78.20 percent above the year-ago holiday week's 10,879.

Auto output for the 1988 calendar year is estimated at 1,027,528 units, 28.03 percent more than the 1987 running total of 802,581.

Last week's car output was scheduled at 17,181, 6.52 percent below the prior week's 18,380 but 30.93 percent more than the year-ago week's 13,122.

Assembly plants shut down last Friday until Jan. 3 for the holidays.

GM ponders Japan move in luxury lair

Lexus and Infiniti pose new threats

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — With this week's public debut of Toyota's Lexus and Nissan's Infiniti models, General Motors faces a serious strategic dilemma for the 1990s: How to block the Japanese offensive into GM's high-profit luxury and bread-and-butter mid-sized lines.

The onslaught of the upscale Japanese models — Honda's entrenched Acura and the two newcomers — has triggered serious internal debate among GM executives about how much of a threat the Japanese pose in the luxury segment.

Some GM insiders view the latest Japanese foray as another very serious threat into another critical niche battleground. Others discount the abilities of the Japanese to build and market luxury models — believing the market already is saturated with $30,000-plus automobiles from Europe and the United States.

Publicly, GM executives have said only that they expect the Japanese to be tough competitors in the luxury segment. But they have been mum on revealing GM's strategy — if it has one — to halt the Japanese advances into traditional GM strongholds.

Nevertheless, the planned introductions of the upscale Japanese models next fall has prompted a flurry of internal reports outlining GM's assessment of the Japanese manufacturers' plans and the strategic options GM sees open to its Buick, Oldsmobile and Cadillac divisions.

One such report, issued last March to GM's top product planners and Buick, Oldsmobile and Cadillac executives, calls the Japanese auto manufacturers "the greatest long-term threat" to GM, a threat that could cost many upscale GM dealerships. It adds that the Japanese will eventually dominate the prestige luxury market.

GM expects the Japanese to introduce seven to 10 new luxury nameplates in 1990 and 1991 that will "rival GM styling, pricing and comfort levels, while offering superior levels of quality, advanced technology and electronics that significantly improve ride and handling."

The report concludes:

"Without competitive levels of quality in GM's luxury cars, GM's ability to compete in the luxury market will be substantially diminished."

The report emphasizes the historic success of the Japanese in the United States and sees their ability

Buick's real-world show car, the Park Avenue Essence, could well be the division's future large car

It's show time for autos

Glitter galore as Detroit, Los Angeles exhibits open

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — This week's star-studded opening of the North American International Auto Show is an event of many "firsts."

The show will mark the world introduction of both Toyota's Lexus and Nissan's Infiniti upscale car divisions, which will also show their wares across the country at the Greater Los Angeles Auto Show.

Between them, the Detroit and Los Angeles shows will see the North American premieres of dozens of cars from both Europe and Asia.

Detroit will host the world debut of no fewer than two dozen pre-production prototype and show cars aimed at potential future markets.

It will mark the official rechristening of Detroit's auto show with its loftier international title, as well as be the unveiling of Motown's newly designed and expanded Cobo Hall exhibition facility.

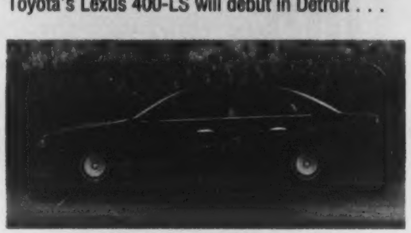
But as Detroit's North American International Auto Show dominates the world and business press, the Greater Los Angeles Auto Show will seek the attention of Southern California-based enthusiast publications and the region's hot consumer market. Dates for both shows are Jan. 7-15.

While the industry's movers and shakers will be on hand for this season's first international show, the stars at Detroit will be the cars.

Though it may be ironical that Japan's Toyota and Nissan would choose Detroit to launch their upscale car divisions, the move also drives home the importance of the North American market as well as the international theme of the show.

As General Motors assesses the seriousness of the Japanese luxury car threat, it will unveil at least one concept car from each of its five divisions — including luxury models from Cadillac and Buick — and a host of other new 1989 models.

Toyota's Lexus 400-LS will debut in Detroit . . .



. . . As will Infiniti's Q-45 sedan

The GM division with the most show vehicles on display will be the company's largest — Chevrolet.

Leading off at the Chevy stand will be the division's newest family of cars, the Lumina coupe, four-door sedan and all-purpose vehicle, the APV.

The first Lumina to make it to Chevrolet dealerships will be the sedan, which will be available by spring. Designated a 1990 model, the sedan will be equipped with four-wheel

OK expected for NUMMI truck build

By Lindsay Chappell and Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTERS

New United Motor Manufacturing Inc. is pushing forward its application to expand paint shop operations in order to produce pickup trucks for Toyota.

The Fremont, Calif., joint venture between General Motors and Toyota has supplied new information to local environmental authorities indicating it is willing to meet rigid state emission standards on the project.

In California, a Bay Area Quality Management District engineer said it is likely the proposal will be approved, perhaps as early as this May.

A top executive of Toyota Motor Sales U.S.A. said last week that while NUMMI has emerged as the parent company's leading candidate for truck production, he hopes a second plant to produce trucks would be added in the Midwest.

"Using NUMMI is the fastest way we can get truck production, but my answer to Japan (on where to locate a truck factory) was that we should really go to the Midwest for truck production because the middle part of America and the Southeast are the two biggest truck markets," said Robert B. McCurry, executive vice president of sales and operation for Toyota Motor Sales U.S.A. McCurry said he can envision Toyota with two light-truck manufacturing plants in the United States.

He confirmed that NUMMI has submitted additional information to California environmental officials in seeking permission to expand vehicle production.

"I know they have filed and I really, sincerely hope that it is for truck production because we want truck production very quickly. I would assume that is what it is for, but I really don't know," he said. U.S. antitrust laws prohibit Toyota Motor Sales from becoming directly involved in production decisions by NUMMI.

Last summer, NUMMI applied to the district for approval to double capacity by building 200,000 pickup trucks annually for Toyota. However, authorities returned the application for clarification on how the company intended to meet local emission standards, particularly from proposed paint shop operations at the site.

According to the Bay Area Air Quality Management District, which is responsible for approving the expansion plans under California law, the company has now answered "most" of the agency's requests for clarification and appears to be in a good

$5 A DAY: *Ford's wage revolution is 75 years old; it made mass production and today's industry possible*

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Jan. 5, 1914 — 75 years ago this week — was a momentous day for the auto industry and for capitalism.

On that day, in a move one historian called "breathtaking in its boldness," Henry Ford more than doubled his workers' wages to the mind-boggling rate of $5 a day.

In doing so, Ford not only made history, he made mass production — indeed, the industry's future — possible.

Which is to say, he created consumers — workers with enough affluence to satisfy their appetite for goods, especially the goods they built on Ford assembly lines. In the process, the $5 wage made their hard and often distasteful work more acceptable: It allowed workers and their families new-found economic opportunities and assured that they could sustain them.

It was quite a contrast. Because as the new year of 1914 dawned, for most auto workers there were no "lifestyles," only lives. Something had to be done. As 1913 drew to a close, lives spent on nine-hour shifts at Ford's Highland Park, Mich., assembly line were so unappealing that the turnover rate was almost 400 percent a year. Without the hook of high wages, Ford workers simply found easier or less monotonous jobs.

But with that kind of turnover, and the constant influx of "undisciplined" immigrant labor into what was then a high-tech plant, Ford's future production plans were seriously jeopardized.

In 1913, Ford had applied the assembly line to the automotive industry and real mass production was born. And, for 1914, Ford's plan was to move up to three eight-hour shifts rather than the existing two nine-hour shifts, taking advantage of his new technique. For that to work,

Canadian imports boost U.S. auto trade deficit

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A surge in imports from Canada caused a jump in the U.S. automotive trade deficit in passenger cars and light trucks for September.

The deficit jumped 10.55 percent over the year-earlier figure, due largely to an increase in imports of both cars and light trucks from Canada. However, U.S. exports continued to increase at a healthy pace.

The value of imports increased 16.17 percent for the month, while exports increased 39.21 percent during September.

September's increase in the automotive trade deficit follows a string of declines, including a 6.5 percent drop in August.

Comparing the 12-month period ended Sept. 30 with the year ended Sept. 30, 1987, the automotive trade deficit showed a 4.29 percent improvement. As of September, the United States was running an annualized trade deficit in passenger cars and trucks of $43.521 billion, down almost $2 billion from last year's $45.473 billion. The annual totals reflect a 3.71 percent decline in the number of vehicles imported to the United States in the 12-month period. Exports jumped 21.71 percent during the same period.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.179 billion for September, compared to last year's deficit of $2.875 billion. Total car and truck exports for the month had a value of $977.2 million while car and truck imports were valued at $4.156 billion.

Exports of passenger cars reached 77,898 vehicles with an estimated value of $817.0 million in September. Light-truck exports for the month were 15,379 vehicles with an estimated value of $160.1 million. The value of passenger-car exports was up 38.89 percent to Canada, 1,760 percent to Japan and 196.92 percent to nations lumped in the category of "other" by the Commerce Department. Passenger-car exports to those "other" countries totaled 7,156 units for the month.

On the import side during September, both the quantity and value of car and truck truck shipments from Japan continued to decline. There also were declines in passenger-car shipments from Yugoslavia, the United Kingdom, Italy and France. Shipments from countries classified as "others" also declined for the month.

Canada, West Germany, Brazil, Sweden, South Korea, Mexico, France and Brazil showed import growth in August.

Total car and truck imports in September had a value of $4.156 billion, up 16.19 percent from the $3.577 billion in September 1987. There were 405,705 finished vehicles imported to the United States in September 1988, compared to 349,304 vehicles in September of last year.

Imports of passenger cars reached 348,797

Skoda slates Favorit for West export

PRAGUE, Czechoslovakia — Skoda will begin exporting its new Favorit model in early 1989.

And, when the car makes its Western debut at the Geneva Auto Show in March, company officials say they will announce a new joint venture with a producer in the West to build engines. However, it is not known who is in the running for the project.

The five-door Favorit will be exported first to Holland, Denmark, Finland and Greece. Other countries will be added in the second half of 1989.

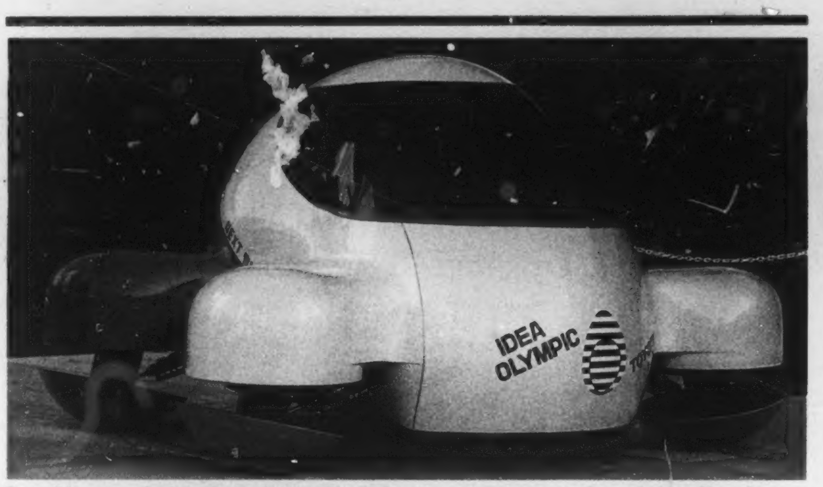
Motokow, Czechoslovakia's auto export company, is eyeing worldwide export of the car, including the United States and Canada.

While details have yet to be worked out, officials say there has been significant interest among potential importers. Plans call for catalyst-equipped versions of the Favorit to be produced in the second half of 1989.

The Skoda Favorit is the first new model from the country in this decade.

Versions exported to the West will have a new 1.7-liter four-cylinder engine.

Importers that have not sold Skoda for years are reportedly interested in handling the Favorit, company officials said.



By walking on wok-shaped wheels, the "Next Wheel" won top honors in Toyota's Idea Olympics

FUN TIME: *Toyota's Idea Olympics spawns far-out concepts*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — A car that "walks" on Chinese woks instead of wheels is one of the off-the-wall concoctions in Toyota's 13th annual Idea Olympics.

The point of the yearly contest is to stimulate creativity and also to inspire various groups in the company to take up new skills.

The "Next Wheel," as the wokmobile is called, was put together by a group from the engine engineering department led by Yoshikatsu Ikeda. In order to complete the project, the engineers, who work mainly with metal engines, had to learn about molding plastics.

The result is an egg-shaped vehicle spinning freely on wok-shaped wheels through the use of a hydraulic cylinder to change the slope and direction of each wok. It provides the ultimate in four-wheel steering. The entry won the president's prize for the group for the fourth time.

About 5,000 ideas were submitted for this Olympics, and they were culled down to 250 final entries. Several entries were rejected because they were too close to ideas that can be put into production. One group, which proposed a variable stabilizer that changes according to speed and road conditions, was advised to take out a patent instead.

Only those with fantasy need apply.

The stamping die and tooling model making department came up with the "Tom-

Ferrari sues Calif. maker of look-alike kit car

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — What's in a name? More than just a label, if the name is Ferrari.

In a precedent-setting federal case, Ferrari is seeking to extend trademark protection beyond its name to include the design itself and the exclusive aura surrounding one of its most coveted cars, the 365-GTB Daytona Spyder.

The Fiat unit hopes to stop a California kit-car maker that builds a look-alike in a jury trial beginning Feb. 28 in U.S. District Court in San Diego.

The case pits Ferrari against San Diego kit-car maker Thomas McBurnie of McBurnie Coachcraft, but it could set a precedent in the replicar business.

McBurnie makes the McBurnie California Daytona Spyder, which is essentially a fiberglass, Ferrari look-alike body on a Corvette chassis.

A version of the California Daytona Spyder became famous on the "Miami Vice" television show.

McBurnie said last week that 84 California Daytona Spyders have been made, with another 22 in production.

According to court records, McBurnie admits he displayed and advertised his car with Ferrari logos on it at least once, but attorneys in the case said the Ferrari name is not the central issue.

Ferrari is expected to argue that regardless of the label, the look-alike is an illegal copy since the public is liable to confuse it with the real thing, cheapening Ferrari's image.

The original Daytona Spyder is a collectors' item that has been auctioned for more than $1 million apiece.

Ferrari introduced the Daytona Spyder in Europe in 1969 and made only 127 models before production ceased in 1974. Only 69 were sold in the United States.

"This car is a work of art," said Kenneth Umans, a New York attorney who represents Ferrari S.p.A., based in Modena, Italy.

"It's not like a toaster that disappears, or a car that nobody cares about after two years. Ferrari doesn't want buyers of its cars to go out and see 600 imitations driving around," he said last week.

McBurnie makes no bones about the fact that his Daytona Spyder is intended to look like the original.

"I styled the car to give the illusion of being the original Daytona Spyder," he said last week.

Court records said McBurnie will argue that Ferrari "abandoned" its rights to the design when it quit making the car.

Umans countered that the Daytona Spyder is important to Ferrari's public image and has remained prominent in the public eye, even though it's no longer made. Court records show McBurnie failed in a motion to have the case dismissed because of the "abandonment" issue.

McBurnie said last week that if Ferrari prevails, the case will open a "Pandora's Box" for car designers.

"How far away from a design do you have to be before it's your own original design?" he asked.

McBurnie said that among other differences, his version is three inches longer and four inches narrower than the original and has different doors, windows and windshield.

"I don't think they can stand up in front of a jury and say that in 1973 or '74, the car was selling for $29,000, and today it's been sold for $1 million to $2 million, that Tom McBurnie has caused them to lose," he said.

Porsche ends 2-year search for U.S. partner

Plan for second line of cars faded when Cook bowed out

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

RENO, Nev. — Porsche Cars North America has called off its search for another make to sell through its U.S. dealer network.

"We are no longer looking for sourcing outside our parent company," said Brian Bowler, who took over Nov. 1 as president of the U.S. sales arm of the West German sports-car specialist.

Bowler said he wants to put an end to two years of speculation linking Porsche and a variety of Asian and European automakers not represented in the U.S. market.

Bowler's declaration ended the search committee, which was made up of senior Porsche U.S. executives. The project was started in late 1986 by President John Cook, who resigned abruptly last September, his quest for a marketing partner unfulfilled.

After Peter Schutz was ousted as chief executive of Porsche AG in 1987, German management had not shared Cook's enthusiasm for the project.

Bowler declined to identify automakers that Porsche had discussions with, saying that would break confidentiality agreements.

But he said most potential partners didn't have products or images that would fit comfortably into the same showrooms as Porsches.

Porsche also has become sensitive to how other automakers can, even inadvertently, capitalize on its performance image. In Spain, Porsche's engineering subsidiary redesigned an engine used in the Seat Ibiza, an entry-level car built by the Spanish automaker. Suddenly, there is a booming business in aftermarket "Porsche" stickers that are placed on Ibizas by owners wanting to identify with the upscale make.

"That's a relationship that Porsche wouldn't wish to repeat," Bowler said. He said that wasn't a direct reason for calling off plans to sell another make in U.S. Porsche dealerships, but he noted that the Spanish situation "is part of an awareness of what can happen."

Cook's original plan had been to provide an import distribution and marketing umbrella and network of interested Porsche dealers for an upscale make that could be sold alongside Porsches.

At the time, U.S. Porsche sales were already beginning to drop from a peak of 30,000 annually toward the current 15,000-unit level. Both Porsche Cars North America and dealers (most of whom also handled beleaguered Audi) had capacity to handle more units and another line was considered the answer.

However, Porsche Cars North America laid off more than a third of its personnel last year. Bowler said that no additional layoffs would be necessitated by his calling off the search for outside sourcing.

Cook sold the original plan as a dealer-requested project. But Bowler said that sentiment seems to have faded. At a pre-Christmas round of dealer meetings, Bowler said many dealers applauded his announcement that the search has been called off.

"The feeling I got from dealers was that they were glad that Porsche was concentrating on its own affairs," he said.

LeSabre facelift
Buick will drop the nondescript flat grille on its LeSabre in 1990 in favor of one resembling other grilles in the division's family. The new grille will bulge out and consist of vertical chrome bars instead of the horizontal style on the current model. The car also will have a new bumper that drops in the center section, setting the new model apart.

POPULAR MECHANICS/JIM DUNNE

Electronic blue books gain favor

Dealers slow to embrace them, but acceptance is growing

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Franchised dealers have been glacially slow to accept computerized pricing guides for used vehicles, yet blue book publishers say the market is growing.

"More dealers are inquiring about electronic value guides," said Arlene Weinstock, marketing representative for the National Automobile Dealers Association's Value Guide. "It used to be that we never received calls. Now we're getting inquiries every few weeks."

Insurance companies, leasing firms, banks and government agencies have been quicker to embrace electronic value guides than dealers.

"The market is growing every day and will play a larger role in the business," said Bob Eads, general manager of California-based Kelley Blue Book. "The main thing is to let dealers know it is available."

Kelley has an electronic version of its appraisal book that dealers can access by telephone. Figures are based on auto auction reports and other sources.

Kelley Appraisal Reports has been on the market for about 18 months. It took the company four years to develop the software for a market potential that Eads says is about 60,000 subscribers.

The service costs $300 per month for five hours of "connect time" with the company's mainframe computer. Eads said the program has about 230 subscribers, primarily auto dealers but some insurance companies and banks. It has turned the corner and is now profitable for the company, Eads said.

Resistance by dealers' used-car managers is apparently the greatest impediment to marketing electronic value guides.

"We have found that the dealers and general managers are enthusiastic about the program but the used-car manager is fearful that electronic guides, once in the system, will replace him," Eads said.

Chicago-based Red Book also sells an electronic version of its value guide, priced at $5 per transaction. The company said it receives 1,500 to 3,000 inquiries per month from insurance companies for replacement values of cars.

"We have had good success with insurance companies," said John Heffinger Jr., publisher of Red Book. "The reason is that they are reluctant to hire used-car managers who can really appraise a vehicle."

Heffinger said the company has tried to market the product to dealers but has had limited success.

"It sounds like a great idea but, in reality, it's tough to sell," he said. "What's faster when a customer brings in a trade-in — going to a computer or getting a quick figure from a blue book?"

Heffinger said experienced used-car managers know how to buy used cars and how to remarket them.

"If a used-car manager needs a computer to tell him the values, then he probably doesn't know what he is doing," he said.

Another Chicago-based company, CCC Information Services, offers electronic evaluation of vehicles to insurance companies only.

The company was established to help insurance company adjusters settle claims for stolen, damaged or totaled vehicles.

It has 130 insurance customers — including State Farm Insurance and Allstate — but does not currently offer an electronic value guide for dealers.

"We are looking at providing a service to dealers but offer nothing currently," said William R. Geen, vice president — valuation services.

He said the company sells information on a per-transaction basis, depending on the volume of business.

Georgia-based Black Book sells new-car price information on diskettes to leasing companies. They use it to establish residual values and vehicle costs.

"The market is not overwhelming, but the product is selling well," said Gene McDonald, president of Black Book.

He said the company breaks even with its electronic price guide but expects the product to turn a profit this year.

"There is a market out there, but the extent of it is unknown," said McDonald.

He said electronic value systems are impractical for dealers because printed books are less expensive and more convenient — Black Book fits into a shirt pocket.

Prices are generally lower for the printed books, too. The NADA Official Used Car Guide has a median subscription price of $27, while the weekly Black Book costs $62 annually, for example.

"There are some uses for electronic information, in-

see ELECTRONIC, page 7

Commerce on '89: Cars off, trucks up

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. Commerce Department predicts that new-car sales will slip in 1989 and truck sales will gain modestly.

In its annual economic report "U.S. Industrial Outlook 1989," released yesterday, the department's Office of Automotive Industry Affairs forecast 10.6 million passenger-car sales for the year and 5.0 million light-truck sales for the year, compared with the its estimate of 10.7 million car sales and 4.9 million truck sales for 1988.

U.S. sales of North American-built passenger cars will be 7.6 million for 1989, down from an estimated 7.7 million in 1988, the Commerce Department said. That includes vehicles produced by transplant automakers in North America. Sales of imported cars will remain constant at 3.0 million, according to the report.

The anticipated 1989 market share for North American-built cars, including passenger cars produced by foreign-owned factories, is 71.6 percent, the Commerce Department said. Sales of vehicles imported from Japan will account for an estimated 17.6 percent of the market. All other imports will account for 10.8 percent of the market, according to the forecast.

The government projections mean a slight decrease in market share for North American-built cars from the estimated 71.7 percent they held in 1988, despite the fact that North American capacity is increasing due to transplant manufacturing.

The government's numbers also portend a drop in market share for Japanese imports from the 18.6 percent estimated for 1988, and an increase in market share for all other imports, which are estimated at 9.7 percent of the market for 1988.

The Commerce Department did not forecast separate sales outlooks for both traditional American-owned automobile manufacturers and transplant manufacturers, as has been done in years past. That means the department is no longer predicting how vehicles produced in North America by U.S.-owned companies will fare vs. vehicles produced here by foreign rivals.

For 1989, the Commerce Department is forecasting a decline in sales of small, intermediate and large cars, but expects some growth in sales of compact cars.

The report said the domestic light-truck market will "continue to be the strongest performer in the industry. Helped by the shift in the currency values, the domestic industry has been capturing record market shares in compact pickup trucks. Market share in 1988 was almost 68 percent, compared with 57 percent the previous year.

"Market acceptance of minivans has also been extremely strong," the Commerce Department said. "In particular, compact passenger van sales have been growing at an average annual rate of more than 25 percent since 1985.

"Another important development has been the explosive growth in demand for multipurpose vehicles, which have increased at an average annual rate of more than 10 percent since 1985. Multipurpose vehicle sales are likely to continue to grow as new product offerings broaden the appeal of this type of vehicle," the report said.

The Commerce Department projections assume the Japanese government will discontinue its voluntary restraints on Japanese car exports to the United States as of April 1, 1989. It also expects exchange rates to remain between 120 and 140 yen to the dollar throughout the year.

The report predicts a fiercely competitive 1989 for all vehicle producers selling in the U.S. market due largely to foreign exchange rates. The depressed value of the dollar has brought parity to the production costs of most manufacturers, thus wiping out artificial pricing advantages, the report claims.

Although the current currency situation is of most benefit to domestic manufacturers, the forecast cautions U.S.-based automakers not to become overly reliant on favorable exchange rates for continued prosperity.

In 1989, the report said, "The ultimate level of sales will depend on the overall strength of the economy and further changes in the value of the dollar. Price increases on foreign cars because of the lower value of the dollar vis-a-vis other currencies could lead to a better performance among domestic manufacturers, allowing them to regain

Executives' deaths alter VW auto show plans

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

A memorial service for James Fuller will be held at 11 a.m. Thursday — the same hour that the late head of Volkswagen United States was to have introduced the company's newest model to North America.

VW and its sister division, Audi, have canceled back-to-back press conferences that had been scheduled for the North American International Auto Show in Detroit.

"It just doesn't seem particularly appropriate right now," said a spokesman for Volkswagen U.S.

Fuller, who was vice president in charge of Volkswagen U.S., and marketing director Lou Marengo were killed Dec. 21 while returning from West Germany aboard Pan Am flight 103.

Though there will be no formal presentation, the VW Corrado and the Audi V-8 will still be displayed this week in Detroit and at the Los Angeles Auto Show. It will be the first U.S. showing for both vehicles, which go on sale later this year.

A memorial service for Marengo was held Dec. 26 in Rochester, Mich., where he lived. A second service was scheduled for last Friday in Granada Hills, Calif.

Volkswagen of America President Noel Phillips, who had been in South Africa for the holidays, was to return to the United States for Marengo's second service. Phillips is taking over Fuller's duties until a successor is named.

On the day after the crash, Phillips phoned Doug McDonald, chairman of the VW dealer council, to say the company's first concern would be to take care of the needs of the victims' families, McDonald said.

Phillips has served as an interim chief before on VWoA's Audi side, where the company has replaced three vice presidents since 1986. He's expected to be looking for a candidate who knows the U.S. market, understands the dealer network and can work effectively with Volkswagen AG overseas.

There is a possibility that Hans-Jorg Hungerland, who is scheduled to replace Phillips March 1 when Phillips leaves to head VW's Autolatina joint venture with Ford in Brazil, could come to the United States earlier. But that could depend on how much work remains for Hungerland in his current job as export sales manager for Volkswagen AG, the spokesman said.

The top Volkswagen United States sales executive under Fuller is Rich Weidman, who was named to the position in early 1988.

VW will likely reschedule the Corrado press presentation for the New York Auto Show in late March, the spokesman said.

The memorial service for Fuller is scheduled for 11 a.m. Thursday at Christ Church Cranbrook, 470 Church Road, Bloomfield Hills, Mich.

Contributions in Fuller's memory may be sent to two organizations: Mothers Against Drunk Driving, 669 Airport Freeway, Suite 310, Hurst, TX 76053; and St. Vincent and Sarah Fisher Center, 27400 W. 12 Mile Road, Farmington Hills, MI 48018. The center is a home for abused and neglected children.

TRADE

units for the month with a value of $3.654 billion. Imports of light trucks were 56,908 units, with a value of $502.4 million. The value of imported trucks increased 42.67 percent in September, while shipments increased 10.58 percent.

Japanese car imports dropped 14.83 percent for the month and the value of the shipments fell 14.14 percent. Japanese truck imports were off 16.27 percent and their value was down 5.88 percent. Japan shipped 146,261 cars to the United States in September, down from 171,722 a year ago. Truck shipments were 28,927 units, down from 34,550 units last year.

Canada posted a whopping 75.20 percent increase in shipments of passenger cars during September, sending 100,507 cars to the United States for the month as compared to 57,368 in September of last year. Canadian truck shipments increased 61.85 percent for the month to 26,798 vehicles.

South Korean shipments staged a big recovery in September by increasing 156.07 percent to 47,759 passenger cars for the month. Korean shipments had been depressed since spring. Mexico shipped 13,086 passenger cars to the United States in September, a gain of nine units from a year ago. Brazilian automakers shipped 6,121 cars to this country in September, up 84.15 percent from September 1987.

West German shipments rallied during the month, increasing 50 percent from September 1987. Swedish imports rose 5.84 percent for the month. Yugoslavia shipped 36 vehicles in September, according to the Commerce Department, compared to 1,186 cars one year ago.

Shipments from the United Kingdom were down 71.61 percent. Imports from France fell 44.82 percent for the month. Italian imports were down 70.81 percent. Car imports from "other" countries were down 29.10 percent to 1,235 vehicles.

Compiled by Automotive News from official statistics of the U.S. Commerce Department, as reported by the U.S. International Trade Commission. Because of rounding, figures may not add to the totals shown.

CAFE cut tied to global warming

WASHINGTON — EPA has told NHTSA that any proposal to relax fuel efficiency standards is wrong because of the potential of increasing emissions that contribute to global warming.

But Don R. Clay, EPA assistant administrator for air and radiation, agrees with NHTSA that a one-year rollback "will not have a significant effect on global warming."

EPA's program on global warming is still in its early stages, but Clay said the agency knows that efforts to improve vehicle fuel efficiency "are likely to be a major component of any future domestic or international response to concerns about global warming."

He noted that at least two of the major bills introduced in the last Congress included specific fuel efficiency or carbon dioxide emission standards for future vehicles. "We believe that the debate on global warming will intensify in the upcoming congressional session," he said.

In response to petitions filed by General Motors, Ford Motor Co. and the Automobile Importers of America, NHTSA has proposed setting the corporate average fuel economy standard for the 1990 model year somewhere between 26.5 and 27.5 mpg. The decision is due soon.

Last October, NHTSA rolled back CAFE standards for 1989 cars from 27.5 mpg to 26.5 mpg and it was taken to court by the Natural Resources Defense Council on grounds that allowing larger engines would raise carbon dioxide levels and increase global warming.

COMMERCE

FROM PAGE 3

some lost domestic market share and to take advantage of renewed export opportunities.

"However, while the dollar's reduced value has helped the domestic industry's competitive position, it threatens to mask the need for continued improvement in manufacturing efficiency and product development by the traditional U.S. manufacturers," the report said.

The outlook also maintains that due to the currency situation, it is actually cheaper to build cars in the United States than in Japan.

"Currency-driven increases in foreign-car prices appear to have eliminated the Japanese manufacturing cost advantage," the report said. "In fact, at 125 yen to the dollar, it is reportedly cheaper to manufacture a car in the United States than in Japan.

"These changes have stimulated the foreign production of Japanese-nameplate cars. The vehicles are being sold in the countries where they are produced and in export markets, including, in some cases, Japan."

The outlook also noted that currency exchange rates are having an impact on the sales position of European manufacturers.

"The fall in the value of the dollar vis-a-vis the currencies of major European automotive producers (particularly against the West German mark and the Swedish Krona) have also had their impact on the U.S. market," the Commerce Department said.

"The high-priced German and Swedish luxury cars have become even more expensive, and unit sales have declined from the levels of prior years. Furthermore, several U.S. automakers have begun to export 'niche' vehicles to Europe, including sports models, minivans and multipurpose vehicles.

"In aggregate, the exchange rate change means the geographic distinctions of competition are gone. It is now more inappropriate than ever before to characterize this industry by geographic origin.

"No longer do all U.S. manufacturers lag behind all Japanese manufacturers. The progress made by some of the traditional U.S. manufacturers is now apparent, and the inefficiencies of some of the Japanese manufacturers are also evident. The result is true firm competition," the outlook said.

If the dollar falls further against major industrial currencies, the U.S. automotive sector will continue to benefit, the Commerce Department said, adding that some component outsourcing may return home.

"However, any change in sourcing decisions based on the relative value of the yen and the dollar will not occur until the exchange rates appear to have reached some degree of stability," the report said.

Over the long term, "the industry can expect further, but slow, growth as long as the economy expands, the report concluded.

"Competitive pressure from new entrant countries and from new U.S. manufacturers will continue to grow for the foreseeable future," it said. "Over the past decade, the Japanese and other new entrant countries have raised the level of competition in this market to the point that it is now the most intense seen in more than 50 years."

OBITUARIES

Leonard E. Froslie

NORTHVILLE, Mich. — Leonard E. Froslie, 75, retired Chrysler transmission design engineer, died Dec. 22. He worked at Chrysler for 32 years before retiring in 1972.

Howard L. Hauser

INDIANAPOLIS — Howard L. Hauser, 77, former owner of Oaklandon Sales (Chevrolet) in Oaklandon, Ind., died recently. He owned the dealership for 31 years and later worked at other local dealerships.

Toyota wins Lexus name — for now

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Toyota saved face and avoided, at least temporarily, immense financial losses when a three-judge panel last week let Toyota temporarily keep the Lexus name on its new luxury car division.

The eleventh-hour decision allowed Toyota to show the cars at their public debuts at the Detroit and Los Angeles auto shows, but it prohibits the use of the Lexus name in national advertising.

"We are gratified that the stay granted to Toyota on Jan. 2, by a federal appeals court judge, has been extended by the appellate court until a hearing on Toyota's appeal at the end of the month," said Bob McCurry, executive vice president of Toyota Motor Sales U.S.A.

"We remain optimistic that our appeal of the lower court's decision will ultimately be upheld, and we will be allowed to use the Lexus name for our new luxury cars."

On Dec. 30, U.S. District Judge David N. Edelstein ordered Toyota not to use the Lexus name because it conflicted with the name of Lexis, a computerized information service that belongs to Mead Data Central, based in Miamisburg, Ohio.

Edelstein said Toyota could use the name if it paid Mead damages and if its advertising pointed out the difference in the two businesses.

He also ordered Toyota to stay out of the computer business, where it might compete with Mead.

Toyota refused the compromise, served notice it will appeal and petitioned successfully for permission to use the name pending the appeal.

Both sides asked for an expedited appeal, which the judges accordingly scheduled for Jan. 30 in the U.S. Court of Appeals in New York.

Toyota's attorney, Arthur Gray, said that pending the appeal, Toyota doesn't plan to use the Lexus name in advertising other than in connection with the auto shows, and only in the cities where they're being held. The shows include Detroit, Los Angeles, Cleve-

An expanded Cobo Hall allowed import manufacturers to join domestics on the same floor

DETROIT: *Glamour, glitz and optimism meld at expanded auto show*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Global automakers, bracing for the coming sales surge of luxury cars, sport-utilities and minivans, dazzled Detroit's first North American International Auto Show with their new weapons in the competitive wars.

The show — a showcase of rebirth and the industry's latest new direction — was a laser-dazzling, upbeat affair. And if product development is an indication, no one was more upbeat than automakers who see an overall market growth for the near future.

Consensus opinion: Look for 15 million U.S. car and truck sales in 1989, with surges in both the luxury market and in the sport-utility/all-purpose vehicle arena.

Not only did each of the Big 3 take the opportunity to show the latest in pricey, high-line vehicles, but they showed they could have fun, too, with concept cars and trucks that concentrated on the ever-expanding sport-utility and truck segments.

And don't forget the Japanese — not this year. Toyota and Nissan each brought heavy artillery for the coming luxury segment battle, simultaneously debuting at Detroit and Los Angeles shows their Lexus and Infiniti car lines that aim to slug it out with the Europe's best — including Audi's potent V-8, Volkswagen's 140 mph Corrado and Porsche's 911 Carrera 4, which also appeared at Detroit.

The Jeep ZJ production model will be similar to this sport-utility concept

A 'brother' for Cherokee

Jeep will add aero model and keep its 'classic'

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors has finalized a long-range product plan that calls for Jeep to offer both a "classic" Cherokee and an "aero" Cherokee in the early 1990s.

The decision ends a debate within the company about how to update the current Cherokee without tampering with its so-called "Jeep-ness."

At its December meeting, the Chrysler Corp. board of directors approved a long-range product plan that calls for the retention of the present Cherokee with technological enhancements into the next decade but production as well of the Jeep-ZJ, a more aerodynamically styled sport-utility vehicle.

The ZJ production vehicle will be similar to the Jeep concept sport-utility that Chrysler unveiled last week at the North American International Auto Show in Detroit.

Chrysler's decision is similar to one reached by Ford Motor Co. when it decided to retain the rear-wheel-drive Ford Mustang and add to its lineup the front-wheel-drive Ford Probe, originally developed as a Mustang replacement.

Vans, utilities socked with a 25% tariff

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Importers of multipurpose vehicles may have to raise prices as a result of a U.S. Customs Service ruling last week that defines sport-utility and vans as light trucks subject to a 25 percent tariff.

The ruling, which went into effect Jan. 1, also reduces the attractiveness of using foreign trade subzones to import components in U.S. assembly of multipurpose vehicles. Those components now must be imported at their normal, higher duty rate rather than being assessed a 2.5 percent car duty when the finished vehicle leaves the subzone.

The decision, made in response to a request for guidance by American Suzuki Motor Corp., is expected to cause problems for a number of manufacturers, including Nissan, Mazda, Isuzu, Range Rover and Mitsubishi.

Other companies, such as Suzuki, which already imports its line of multipurpose vehicles as trucks, will be little affected.

Domestic makers hailed the decision, although the 25 percent tariff falls equally hard on captive imports of these vehicles.

Importers felt they were blindsided by the ruling and were scrambling last week to determine how to respond to it.

In diminishing the benefits of foreign-trade subzones, the decision affects both transplant- and domestic-run plants assembling vans and sport-utility vehicles. Chrysler, for instance, which uses Mitsubishi-built V-6 engines in its Caravan and Voyager minivans, will have to pay a 6 percent duty on those engines rather than the 2.5 percent car tariff on the imported content.

Most duties on these types of automobile parts fall in the 6 percent to 8 percent range.

Prior to the ruling, importers had been able to class multipurpose vehicles, including light vans and sport-utility vehicles, as either cars or trucks. Importers that shipped multipurpose vehicles as cars merely equipped them with rear seats. To ship the same vehicle as a truck, the importer needed only to remove the rear seats, perhaps reinstalling the seats once the vehicle entered the United States.

This flexibility was a boon to Japanese companies seeking a way to boost sales under Japan's voluntary restraint agreement on passenger cars. The arrangement also benefited companies like Range Rover, which imports its four-wheel-drive vehicle as a passenger car, thus avoiding the 25 percent tariff.

"We're investigating what's going on, it's too early to comment," Charles Hughes, chairman of Range Rover of America, said late last week of the decision. His reaction was typical among the importers, although a later statement from Range Rover indicated the company was going to seek a ruling that "will preserve our present Customs rate."

The company, which imported 3,427 vehicles in 1988, is the most expensive vehicle in this class, at $35,800.

Big 3 on '89: Good but not great

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Big 3 economists generally agree that 1989 is going to be a good year with moderate economic growth in the United States, little chance of a recession and new-vehicle sales near 1988 levels.

Two of the Big 3's corporate economists predict 1989 new-vehicle sales will be slightly lower than in 1988; the other sees a sales year virtually as strong as 1988.

Ford is the most bullish, just as it was one year ago in its 1988 forecast. Ford predicted sales of 15.4 million for 1989, including 10.2 million cars and 5.2 million trucks.

The official 1988 total is 15,789,011.

General Motors predicts new-vehicle sales "approaching 15 million" in 1989, rounding them off to 10 million cars and 5 million trucks. Chrysler sees sales of 15 million — also 10 million cars and 5 million trucks.

The prediction of Donald P. Hilty, Chrysler Corp.'s economist, is based on one possible scenario — the most likely one, Hilty said, with a 60 percent probability of slower but sustained economic growth.

Chrysler has sales forecasts that accompany three other possible economic scenarios, one of which — at a 25 percent probability — is a recession.

Audi awaits 'no defect' from NHTSA

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The head of Audi of America expects NHTSA will announce soon that a lengthy study has uncovered no defect that causes unintended acceleration.

The report, which was authorized by NHTSA 15 months ago, "will endorse the automatic shift lock as the most effective answer to an industrywide problem," said Richard Mugg, vice president in charge of Audi of America. The device, which is now used on Audis with automatic transmissions, requires the brake pedal to be depressed before shifting from park.

Audi won't emerge unscathed, however. Although no mechanical or electronic flaw will be cited, the report will conclude that pedal confusion caused some accidents, Mugg said.

Audi has been at the heart of the controversy that has seen cars with automatic gearboxes accelerate out of control. Drivers have claimed that their foot was on the brake, not the gas pedal.

A spokesman for Mercedes-Benz, which with Audi is one of six manufacturers currently being investigated for the problem, said he also senses that the report will indicate "there are no gremlins that cause spontaneous acceleration in cars."

NHTSA ordered the study in October 1987. It commissioned the Transportation Research Systems Center of Cambridge, Mass., a government-sponsored organization independent of NHTSA, to carry it out.

The study intended to study the overall phenomenon of unintended acceleration. It also attemped to judge the effectiveness of the shift lock. Audi now offers the device on all new models with automatic transmission and has installed it on others through recalls. In 1987, Nissan announced a recall to install shift locks on its 280-ZX and 300-ZX models.

A NHTSA spokesman declined to comment until the study is released. The Mercedes spokesman said the study was to have been completed at the end of last month. It was then going to be sent to government agencies for review.

Donald Petersen, left, and Edsel Ford, chatting amiably AUTOMOTIVE NEWS/JOE WILSSENS

Whither Ford family?

Fourth generation wants bigger role

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. Chairman Donald Petersen said the company is breaking new ground as it seeks to define a role for the fourth generation of Ford family members, but he insisted that any promotions to top management will be based on merit.

Petersen's comments last week came in the aftermath of a Fortune magazine article that said the young Fords are yearning for a bigger role in company affairs.

The Jan. 16 cover story also said the two newest family members on the board — Edsel Ford II and William Clay Ford Jr. — are at odds with Petersen and are miffed by what they see as their second-class status on the board.

Edsel, 40, is general sales manager of Lincoln-Mercury Division. Billy, 31, is managing director of Ford of Switzerland. The two great-grandsons of the company's founder were named to the board a year ago this month.

Petersen said the Ford family, as holders of 40 percent of the voting stock in the company, is one of the many constituencies that he, as chief executive, must serve. But that status won't give any of them an inside track to top management positions.

"One of my obligations is to work very hard to make available as many fully qualified individuals as I possibly can," said Petersen, who is due to retire in 1991. "The more choices the company has, the better off the company is."

That approach "clearly does not exclude Edsel Ford or Billy," Petersen said.

"I admire the way that both of them are working so very hard to see just how far they would go climbing the ladder of professional management."

The question of the fourth-generation's role took on urgency with the death of Edsel's father, former Chairman Henry Ford II, in September 1987. The Fortune article said that Billy's father, Vice Chairman William Clay Ford, persuaded Petersen to put Edsel and Billy on the board.

"We have never been here before," said Petersen, referring to the debate over the fourth generation's voice. "So we are having a lot of discussions about it in a very informal way." Petersen said those conversations have included himself, Edsel, Billy and Billy's father.

After the cousins' board appointments, several experts on corporate management said the move carried a number of risks.

The two Fords would be far less experienced than their peers on the board, the experts said. There were doubts about whether they would have any meaningful input.

It also was suggested that a good measure of their clout would be the types of committee assignments they would hold in several years. So far, neither has been given a committee seat.

After Petersen met with reporters, he approached Edsel, who was watching amid the Lincoln-Mercury products at the North American International Auto Show. They shook hands, posed for photographers and chatted amiably about the L-M display.

Sunrise group finds investors; extended deadline does trick

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — A four-franchise dealer group on Long Island has apparently succeeded in attracting investors in a limited partnership.

Sunrise Auto Partners, which consists of four franchises held by John Branham, began soliciting investors last June.

Branham's four dealerships are Autoplaza Nissan and Westbury Dodge in Westbury, N.Y.; and Sunrise Toyota and Oakdale Mitsubishi in Oakdale.

The offering was intended to raise between $34 million and $60 million by selling partnership shares for $90,000 each, according to documents distributed by Smith Barney, Harris Upham & Co.

The private sale of the shares was to be completed Sept. 30, but the deadline was postponed to Dec. 31 because the $34 million minimum hadn't been met.

However, the minimum investment apparently was reached before the later deadline expired.

Branham and his financial advisers said earlier that Securities and Exchange Commission rules forbid comment on pending offerings.

And while the December deadline had already come and gone, they said last week they still couldn't comment on the offer.

The offer of partnership shares reportedly remained available as of last week.

If the minimum units hadn't been sold by Dec. 31, the Smith Barney documents said the sale "shall be deemed rejected."

The limited partnership formed by Branham's dealerships would be privately held, but its books would be available for investors to scrutinize, and the group could ultimately offer stock to the public.

Some analysts view the move as a preliminary step toward public ownership.

Pace of incentives doesn't slow down

By Laura Clark
AUTOMOTIVE STAFF REPORTER

Domestic automakers continued their non-stop pace on consumer incentives last week by freshening rebate programs.

Ford Motor Co., Chevrolet, Buick, Oldsmobile and Pontiac announced new rebates on 1988 and 1989 cars and trucks.

Audi of America also began offering direct consumer rebates to clear inventories of its 1988 Audi 80 and 90 models. The new rebates are in addition to scaled back dealer rebate programs.

AUDI: To attempt to clear its stock of 1988 Audi 80s and 90s, Audi is offering $2,500 customer rebates through March 31.

Audi will also continue to offer various factory-to-dealer incentives. In an attempt to move cars with manual transmissions, the company is reimbursing dealers $1,000 for any front-wheel-drive five-speed 80/90 models. It is giving $500 on automatics and Quattro (four-wheel-drive) editions.

The program took effect Jan. 1.

Before then, Audi had been giving dealers $1,000 to $2,500 on each 80 or 90. It still has about 4,000 of the 1988 models left.

BUICK: Buick announced rebates on 1988 Regal models and five 1989 car models in a program that began Jan. 5 and expires March 2. Consumers can receive $500 on 1988 Regals, $400 on 1989 Century and LeSabre models, $500 on 1989 Skylark and Regal and $750 on 1989 Electra/Park Avenue.

Both retail sales and leases are included. No dealer participation is required. While the rebates apply to ordered cars, the vehicle must be delivered before the cutoff date.

CHEVROLET: Chevrolet announced new consumer cash incentives on 1988 and 1989 cars and is extending incentives on truck models until Jan. 15. The truck program was scheduled to end Jan. 8.

In a program which began Jan. 5 and expires Feb. 28, consumers can receive $1,000 on 1988 and 1989 Celebrity models equipped with four-cylinder engines, $600 on 1988 or 1989 Celebrity models equipped with six cylinder engines, $400 on 1988 or 1989 Corsica and Beretta models, $300 on 1988 and 1989 Cavalier models, $600 on 1988 and 1989 Spectrum models with manual transmissions, $400 on 1988 and 1989 Spectrum models with automatic transmissions and $400 on 1988 Sprint models.

The truck program which was extended to Jan. 15 offers buyers $600 on 1988 or 1989 R/V full-sized pickups, $400 on 1988 and 1987 S/T compact pickups including EL price-leader models, $500 on 1989 S/T pickups including EL models, $400 on two-wheel-drive S-10 Blazers and $600 on 4wd S-10 Blazers.

There is no dealer participation required and both retail sale and lease vehicles are eligible. Customers must take delivery before the expiration date.

FORD MOTOR: Ford extended all of its national incentives on selected 1988 and 1989 cars until Jan. 12 in a program that was slated to end Jan. 4. Ford also announced one change, excluding certain Ranger models, in its national truck incentive program.

Consumers can receive $300 on 1988 and 1989 Festiva L models, $400 on 1988 and 1989 Festiva L Plus and LX models with manual transmissions, 1988 and 1989 Mustang models sold in California that are not equipped with 2.3-liter engines, $500 on 1988 and 1989 Escorts, 1988 and 1988 Mustangs with 2.3-liter engines, 1988 and 1989 Taurus, $600 on 1988 and 1989 Sable, 1988 and 1989 Tempo and Topaz and 1988 Thunderbird and Cougar, $750 on 1988 and 1989 Tracer and $1,000 on 1988 Thunderbird Turbo Coupe and Cougar XR7 and $3,000 on 1988 Merkur XR4Ti.

Truck incentives include: $300 on 1988 Bronco II 4x2, $400 on 1989 Bronco II 4x2 and 1988 Bronco II 4x4, $500 on 1988 and 1989 standard-sized Aerostar models, 1989 Ranger models except Ranger S and those Rangers equipped with manual transmissions, $600 on 1989 Bronco II 4x4, $750 on 1988 Rangers and 1989 Rangers equipped with manual transmissions excluding Ranger S.

OLDSMOBILE: Oldsmobile announced its "New Generation of Savings" program for selected 1988 and 1989 Oldsmobile models from Jan. 5 to Feb. 28.

Oldsmobile is offering consumers $300 on 1989 Cutlass Calais models that are not equipped with the Quad 4 engine; $400 on 1989 Cutlass Ciera models including Cutlass Cruiser wagons; $500 on 1989 Cutlass Calais models equipped with the Quad 4 engine, 1988 and 1989 Cutlass Supreme models and 1989 Eighty-Eight Royale; $750 on 1989 Ninety-Eight Regency and Touring Sedan; and $1,500 on 1989 Toronado and Trofeo models.

There is no dealer participation. fee. Buyers can order eligible vehicles but must take delivery before the expiration date.

Also, Oldsmobile is offering West Coast buyers of 1988 or 1989 Cutlass Supremes two free round-trip airline tickets on United Airlines anywhere the airline flies in the continental United States, as well as Honolulu, Hawaii. There is dealer participation in this program through association ad funds. Included in the promotion are portions of Idaho, Washington, Oregon, Nevada and California.

PONTIAC: Pontiac also announced a new round of national incentives on 1989 models and regional incentives on 1989 Firebirds.

Consumers can receive $400 on LeMans except for the LeMans value leader and 6000 models; $500 on Grand Am, on Firebird in selected southern and western areas of the United States and on Bonneville; and $1,000 on Grand Prix.

States included in the Firebird program are: North Carolina, South Carolina, Tennessee, Georgia, Florida, Alabama, Arkansas, Mississippi, Louisiana, Oklahoma, Texas, Washington, Oregon, California, Montana, Idaho, Nevada, Utah, Arizona, Wyoming, Colorado and New Mexico.

There is no dealer financial participation required. Both retail and lease vehicles are eligible. Consumers may order eligible vehicles from the factory but must take delivery before the expiration date.

Car-truck sales 2nd highest ever

By Philly Murtha and Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTERS

Calendar 1988 turned out to be the second best year ever for combined U.S. car and truck sales, trailing only 1986.

It was the fifth consecutive record for light-truck deliveries and car sales topped last year's total.

Total sales were 15,789,071, consisting of 10,591,438 cars and 5,197,633 trucks. That compared with the 1987 total of 15,182,122 — 10,225,310 cars and 4,956,818 trucks.

Last year's sales were strengthened because incentives became permanent fixtures, and the U.S. economy remained buoyant with another 3.7 million people employed in the calendar year.

"Auto sales moved right along with the economy. All the fundamentals pointed to it being a strong year. The factor that made it the second best year was heavy incentives," said Michael Luckey of the Luckey Consulting Group Inc., Creskill, N.J.

The Big 3 U.S.-based car companies continued to reach into their pockets to provide incentives for customers. It paid off. All three reported gains over the 1987 calendar year and they also boosted car and truck market shares.

General Motors held onto the overall car and light-truck lead with 35.64 of the market, up from 1987's 35.00 percent share. GM gained about 2½ points in the truck market but lost over a third of a point in car share.

The biggest winner was Ford Motor Co. Ford collared 1.03 percentage points more of the car and light-truck market in 1988. It claimed 24.26 percent of the market. In 1987, Ford's market share was 23.23 percent. But its light-truck lead slipped a bit in 1988.

Another first for Ford in 1988: Ford Division bested Chevrolet in both car and truck deliveries. In 1987, Ford was tops in trucks and domestic cars, but Chevrolet took the car-sales honors when captive imports were included.

Chrysler Motors took a larger 14.28 percent share of the car and truck market by selling about as many light trucks, Jeeps and minivans as it did cars in 1988. In 1987, it took 13.52 percent of the market.

FROM PAGE 4

manufacturers with transplant operations here sold more U.S.-built and import cars and light-trucks in 1988 although their combined share of the market slipped to 17.43 percent from 18.47 in 1987.

Honda and Mazda sold more domestic and imported vehicles in 1988, and both had slightly larger shares of the U.S. market. Honda's combined car share was 4.97 percent vs. 4.96 percent in 1987, and Mazda rose to 2.26 percent from 2.23 percent.

Despite its sales increase, Toyota's share of the car-truck market dipped to 6.05 percent from 6.27 percent in 1987. Nissan's total car and truck share declined to 4.15 percent from 1987's 5.01.

The 1988 total of 15,789,071 cars and trucks was 3.99 percent or 606,949 units ahead of the 15,182,122 vehicles sold in calendar 1987.

Trucks set another sales record in 1988, accounting for nearly a third of total vehicle sales. An estimated 5,197,633 trucks were sold compared to 4,956,818 in 1987.

Light-trucks set another record with sales of 4,872,633 units during 1988, up 4.37 percent or approximately 204,000 units from calendar 1987's 4,668,483.

New U.S.-built and imported car sales in the calendar year climbed 3.58 percent to 10,591,438 from 10,225,310 in calendar 1987.

Bolstered by a strong 11.70 percent December gain, sales of U.S.-built cars climbed to 7,526,034 units in the 1988 calendar year; 6.28 percent ahead of last year's 7,081,262 domestic car deliveries.

Six of the eight U.S. automakers reported sales increases for the year. Among the Big 3, Chrysler reported a 10.47 percent increase in U.S. car sales; Ford's deliveries rose 9.19 percent and GM sold 2.42 percent more cars.

Nissan was the only transplant to report a loss. It sold 6.31 percent fewer U.S.-built cars in calendar 1988. Mazda, selling domestic cars for the full year, reported an 18-fold gain. Toyota rose 61.31 percent; Honda, 18.64 percent.

Imported-car sales dropped 2.50 percent for the calendar year. There were 3,065,404 import cars sold vs. 3,144,048 in 1987. The imports accounted for 28.94 percent of the U.S. car market, down nearly two points from 30.75 percent in calendar 1987.

Major gains in import car sales were reported by Ford and GM captives and Toyota. Major import car losses belonged to Audi, Porsche and Yugo.

In December, car sales rose 4.57 percent to 876,765 from 838,487 a year earlier. Domestic car manufacturers sold 615,130 cars, up 11.70 percent from 550,676 in 1987. The import total, however, dipped. Import car sales fell 9.09 percent to 261,635 from 287,811 in 1987. Import car makers took 29.84 percent of December's total car sales vs. 34.33 percent in the same month a year ago.

Domestic light-truck sales dropped slightly in December, but ended calendar 1988 with another record.

December sales of 381,411 reflected a slight 1.06 percent decline from like 1987, largely because of a slowdown in incentive activity. A major new Chrysler incentive program that kicked off Dec. 21 is expected to help bolster the industry's sales this month.

Calendar 1988 was a banner year for domestic truck manufacturers who gained both unit sales and market penetration at the expense of the importers.

As Thomas Mignanelli, Nissan executive vice president, pointed out, "The compact truck buyer is a price sensitive customer. The bulk of those vehicles are sold on the entry price level, and when you have a $1,000 disadvantage you can't reverse that."

Foreign-based truck manufacturers lost more than 4 percentage point of market share in calendar 1988, their penetration of the light truck market dropping to 14.46 percent from 18.59 percent in 1987.

On a volume basis, their sales of 704,377 light trucks in 1988 were off 18.86 percent from 868,057 a year earlier.

Meanwhile, U.S.-based manufacturers' sales of 4,168,256 trucks in 1988 were up 9.68 percent from 3,800,426 the previous year.

All the U.S.-based manufacturers set records for the year.

Ford set a total light, medium and heavy truck record, as well as a new light-duty high.

Its total truck sales of 1,523,215 were up from 1,453,225 in 1987.

Its light-duty sales of 1,462,087 were up from 1,398,969 in 1987.

Chevrolet also set a new total truck sales record of 1,354,491, up from 1987's 1,191,848 and the previous high of 1,317,467 in 1978.

Chevrolet's light-duty sales of 1,336,407 were up from 1,173,675 in 1987 and the previous high of 1,272,985 recorded in 1978.

Chrysler Motors' total light truck sales of 1,016,763 topped the previous peak of 916,566 in 1987.

Dodge' sales of 571,036 topped calendar 1987's 567,326, the former record. Plymouth's 192,273 topped 1987's 140,799, also the previous record.

And Jeep's 253,454 topped 1987's previous high of 208,440.

GMC's 352,999 was also a new high, up from 1987's previous high of 311,217.

I Like You...

And I want to wish you a Happy New Year

Enthusiastically, your friend, Joe

TARIFF

FROM PAGE 1

He said it was too early to determine how much the price would increase as a result.

"It'll hurt us," said Garrett J. (Mike) Nash, Mitsubishi Motor Sales of America's vice president of marketing. "A four-wheel-drive vehicle is a big ticket item. Adding 25 percent to the vehicle will hurt.

"We sold about 8,000 Monteros in 1988 and we expected to sell about 15,000 this year," he added. "Last year Montero accounted for about 7 percent of our sales and this year we project it to be about 10 percent of our volume."

The Suzuki-Isuzu joint venture in Layfayette, Ind., also intended to benefit from flexible classification by classifying sport-utility vehicles built at the plant for Isuzu as passenger cars, Commerce Department records show. The Customs Service ruling means the joint-venture can expect to pay an estimated $20 extra per vehicle in tariffs, according to those documents.

The venture plans to produce 24,000 units in its first phase, meaning nearly $500,000 in added annual tariff costs.

Also covered by the rule is the joint minivan venture by Nissan Motor Co. and Ford Motor Co. in Avon Lake, Ohio.

The Ford-Nissan project would produce 135,000 minivans a year, with a large share of the components coming from Japan.

A Nissan spokesman said the company has not yet gauged the impact on the venture.

Flexible classification had been criticized by domestic manufacturers and MVMA as well as the UAW and the chairman of the House Energy and Commerce Commission, John Dingell, (D-Mich.). All had asked Customs to put an end to the practice because it circumvented Japanese export restraints if they were imported as trucks and the 25 percent tariff on imported trucks if they were imported as cars.

While the tariff helped quota restrained manufacturers like Suzuki and Isuzu to import sport-utility vehicles as trucks, other manufacturers like Nissan, which recently have not been able to meet car quotas, began shifting a greater mix of the sport-utility vehicles into their car imports in order to hit their numbers. Nissan imported 30,000 Pathfinder sport-utility vehicles last year as passenger cars.

Michael Lane, a U.S. Customs official, estimated the ruling would mean hundreds of millions of dollars in additional revenue to the U.S. Treasury. According to industry statistics, approximately 250,000 vehicles will be covered by the ruling annually, he said.

Lane said the decision coincides with adoption by the United States of the harmonized system of tariff schedules on Jan. 1. The system, adopted under the Trade Reform Act of 1988, provides for only two classes of motor vehicle imports; those used principally for the transport of persons, including station wagons and racing cars; and, motor vehicles for the transport of goods.

Range Rover's Hughes said that under the harmonized tariff schedules in Europe, Range Rover is classified as a passenger car. Yet Range Rover appeared on Customs Service field instructions listing all the affected vehicles.

Lane said the ruling will probably "work to the advantage of some importers and the disadvantage of others depending on how long they have been in this game an[illegible]at part of the quota they have."

Steve Collins, MVMA director of international trade, said the organization is pleased with the decision.

"We have maintained for some time the criteria used by the Customs Service for classification of these vehicles should be based on structural and design features and not cosmetic features that can be easily manipulated by importers."

In Tokyo, officials of the Japan Automobile Manufacturers Association expressed shock and suprise over the decision. It said it regretted the decision.

Japanese government officials expressed "serious concern" over the classification change. The Ministry of International Trade and Industry is due to make a decision soon on the possibility of another year of voluntary export restraints on passenger cars. The MPV decision is fueling a recent spurt of rumors that the restraints will be lifted.

UAW economist Steve Beckman said the Customs Service decision "seems like an accurate reading of the harmonized system," but said the union is still concerned about unchecked Japanese shipments of multipurpose vehicles to the United States.

land, St. Louis and Houston.

Officials said in earlier testimony Toyota plans to spend $18 million to $23 million for advertising in the first nine months of 1989, just for advertising time and space. Production costs and ad agency fees increase the total advertising budget to between $40 million and $70 million.

Charles Faruki, Mead's lawyer, argued that even in the absence of Lexus advertising, press publicity surrounding the auto shows was just the sort of thing Mead was trying to prevent when it sued Toyota last April.

Faruki said Mead's Lexis is planning to introduce several new products in the next few months, and publicity for Toyota's Lexus would diminish the impact of Mead's advertising.

Edelstein cited a New York law against "dilution" of a trademark, regardless of possible confusion or competition.

Faruki said Mead notified Toyota in October 1987 that it would object to the use of the Lexus name.

Once Mead notified Toyota of its objection, Lexus Senior Vice President Jim Perkins made four trips to Mead headquarters to negotiate a settlement. Perkins said Mead Data Central President Jack W. Simpson "wanted to work out a win-win situation."

Gray said that Toyota believed at the time that Mead's case "had no merit, and we still think so."

Analysts look for year's car sales to dive half a million

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Auto analysts see a slump in vehicle sales in 1989 as interest rates climb and the economy cools a bit from its heated pace of 1988.

An Automotive News survey of 10 analysts indicates that car sales in the United States will total 10,025,000 this year. While that's well below the 10,570,000 projected for 1988, it would still mark the sixth consecutive year the industry has topped 10 million.

Truck sales will soften at a slightly lower rate, analysts believe. An average of estimates points to just below 5.0 million units, down nearly 4 percent from an anticipated 5.2 million for 1988.

Beale: "We're looking for a real slowdown in consumer durable spending"

The decline will likely stem from an interplay of economic forces.

The scenario can be summarized like this: The Federal Reserve will continue to tighten the money supply to limit inflation and keep the economy from overheating. Higher interest rates will keep some consumers from buying. Demand for cars and trucks will slip.

Consumers may find a silver lining in those clouds, however. Several analysts predicted that automakers will resort to aggressive incentives to keep their share of the market from shrinking.

Campbell: The Acura line will grow stronger and Honda should gain from added output in Ohio

Which automakers manage to hang on to their shares will be another question.

If the analysts are right, however, General Motors will be able to chalk up 1989 as the year it finally reverses its painful slide in market share. Most analysts predicted that a wave of new product launches will begin to inch the world's largest automaker forward again. At the same time, Chrysler is expected to cough up some of its share — but not much.

Among importers, 1989 is shaping up as a strong year for Japan's No. 1 automaker, too. Analysts see Toyota as the company in the best position to hike market share. Honda and Nissan could make progress, too, some analysts said.

Most import losers will be based across the Atlantic, the analysts believe. Currency pressures and the absence of U.S. manufacturing bases could mean 12 months of nail-biting for European exporters.

The 10 analysts are: Wendy Beale, Smith Barney; Bernard Campbell, Data Resources Inc.; Arthur Davis, Prescott Ball & Turben; Jean-Claude Gruet, Salomon Brothers; David Healy, Drexel Burnham Lambert; Maryann Keller, Furman Selz Mager Dietz & Birney; Jack Kirnan, Kidder Peabody; Ann Knight, Paine Webber; Michael Luckey, Michael Luckey Consulting Group; and William Pochiluk, Autofacts Inc.

Here is a summary of their views:

Total U.S. sales

The analysts' projections show that U.S. consumers will take home about 15,023,000 vehicles this year. In comparison, total industry sales will come in at nearly 15.8 million when the 1988 numbers are tallied.

The 1989 forecasts ranged from Knight's and Luckey's estimates of 14.8 million to Campbell's 15.35 million.

Davis: Aggressive pricing will hit the truck market in response to optimistic production schedules

Davis, who anticipates a total of 14.9 million, cited three main reasons for the decline. First, it will cost more to finance a car. Second, incentives offered early in 1988 "borrowed" some sales that would otherwise have occurred this year.

Finally, customers are going to be jolted when they get a glimpse of sticker prices. If you count the addition of standard items and other cost increases, cars will retail for nearly 6 percent more than they did last year, Davis said.

Gruet: "Mercedes demand held up well in 1988 so it may be more susceptible in 1989"

Though consumers will be confronted with higher interest rates, analysts believe that automakers will be offering generous incentives to help move inventory.

New-car sales in U.S.

Car sales will be down about 5.2 percent in 1989, according to the analysts' forecast. They predicted 10,025,000 units will be sold, compared to an estimated 10,570,000 for 1988. The most bullish estimate was Kirnan's 10.3 million. Beale and Davis offered the most bearish: 9.8 million.

"We're looking for a real slowdown in consumer durable spending," said Beale, who expects activity in that area to perk up in 1990.

Kirnan said he thinks the market will be relatively stable. He believes that some forecasts aren't taking into account the predictions for strong business spending in 1989. That will mean a boost for the fleet industry, which already accounts for about a third of the nation's car sales, Kirnan said. Leasing business will also grow as people become increasingly attracted to lower down payments and lower monthly payments, he said.

New-truck sales in U.S.

Truck sales are expected to slip just below 5 million this year, the analysts believe. They are projecting a total of 4.98 million units. Estimates ranged from Knight's and Luckey's 4.8 million to Campbell's 5.15 million.

Davis predicted aggressive pricing in the truck market. The Big 3 have entered the new year with high production schedules. "So to forecast a downturn in trucks, you're talking about plans being upset," he said.

On the imported-truck side, Luckey foresees a dip to 550,000 units from 600,000 in 1988. "Unless the dollar-yen exchange rate strengthens dramatically, there are going to be decisions to produce more small trucks here," he said. Luckey expects that will happen: "Five years from now, imported light trucks will be a small number."

Healy: Ford's market share will rise 0.5 percentage points while GM will be off 0.5 percentage points

Market-share gains, U.S.

GM is poised to make some gains against its domestic competitors this year, the analysts believe. But the gains will likely be small. Sig-

see ANALYSTS, page 40

HILTY

FROM PAGE 38

since the first part of this year. And this doesn't usually happen — that sales are above trend — for any long period of time," Hilty said.

"We don't usually borrow from the future, and sales have been easing slightly since the peak. We think the auto industry peaked about mid-1986.

"We've been expecting a gradual easing, we don't think it will fall off a cliff in the near term, but we're keeping a wary eye out and are looking at our indicators to tell us if there's a chance in the next six months that things will deteriorate faster than that," Hilty said.

In 1989, consumer attitudes will "probably be easing downward mainly due to concern about interest rates," he said.

In total, rates will increase through the first part of the year and drop toward the end. On average for the year, the prime rate will be 10 percent, short rates will be 7¼ percent and long rates 9½ percent, he said.

"Consumers are concerned about interest rates because inflation seems to be picking up," Hilty said. "The Federal Reserve is very cautious, trying to keep a lid on inflation, and in order to do that they are causing rates to increase.

"This is getting wide reporting in the press, and consumers are quite sophisticated and are watching business conditions, especially because we've had such good times now for six years going on seven.

"Rising interest rates would lead them to believe that the economy would be forced to slow down," Hilty said.

Asked about the likely impact of any new gasoline tax, Hilty said, "I guess we have to define first what any new gas tax means. I think a gas tax of 25-50 cents phased in over four or five years would not dramatically hurt the auto industry.

"We do have a problem, the federal budget deficit is a problem, and all areas of the economy are going to be asked to contribute toward (solving) this problem. This is probably the best contribution that the auto industry can make," he said.

AUTOMOTIVE NEWS/JOE WILSSENS

Hilty's prediction for 1989 is 10 million cars, 5 million trucks

A 25-cent-a-gallon tax would probably affect the industry by only about 25,000 units, and some of that potential loss could be offset by reduced interest rates, Hilty said.

"Increasing gasoline taxes would help lower interest rates, help the trade deficit and help us move toward a more stable energy policy," he said.

There is concern that a new gasoline tax would diminish the potential for states to increase taxes for building roads and bridges, Hilty said. "But when we look at Europe, they have higher gas taxes than here and it hasn't hurt their road construction. They have better roads and bridges than we do, and they also have a faster-growing auto industry," he said.

"I don't think a 20-to-50-cent tax would severely restrict the U.S. auto industry," he said.

Hilty further predicted that the 1989 U.S. employment rate would be 6 percent, with total employment at 117 million.

As for the overcapacity problem, Hilty said he believes it still has to be addressed and that more plant closures will occur, especially by 1992, when most of the announced transplant operations will be running at capacity.

"By that time, we'll probably need some more adjustments to traditional domestic capacity," Hilty said. However, there is a possibility that some transplants might bear some of the brunt of the overcapacity problem and not be able to run at full tilt, he said.

"A large unanswered part of the question is that there might be some exporting from U.S. transplants that might relieve some of the overcapacity. We'll be finding out as time goes on whether they'll find ready markets in Europe or other parts of the world," Hilty said.

American households are better off this year than last because real after-tax income is up. They will also be better off in 1989, he said.

Import-car penetration — at 2.8 million units not counting the transplants — will be 28 percent this year, down from around 29 percent in 1988, and import-truck sales will total 600,000 units, he said.

Car sales in Western Europe totaled 12.7 million in 1988; this year they will be down to about 12 million, he said.

European truck sales will fall from about 1.7 million in 1988 to about 1.5 million this year, Hilty said.

Hilty said that, considering real disposable income — after-tax income — American households are better off now and will continue to be better off in 1989 than they were last year.

This may be the worst time of the year to make predictions, though it is the time economists are asked to do so. "This time of year, we in the industry get a little anxious because, seasonally, we have low showroom traffic and sales are low because of holiday shopping and cold weather," Hilty said.

"Sales at this time of year are usually buoyed up by delivery to fleets. It's usually an anxious time and especially this year, with so much uncertainty, it's an anxious time trying to analyze what's going on."

In addition to the seasonal difficulties, analysts are getting some mixed signals because last year at this time "we had very innovative incentives that were quite successful, so year-over-year comparisons are difficult," Hilty said.

ANALYSTS

FROM PAGE 39

nificant changes in any of the Big 3 positions don't appear to be in the cards.

GM's boost will come from the four-door GM10 sedans, which arrive on the market later this year. Chevrolet's Lumina could begin to sap the strength of Ford's Taurus. Analysts also said GM will be spurred by 1989 Cadillac models and the restyled Buick Riviera.

Kirnan thinks a key to GM's prospects will be renewed strength in the Midwest's economy. "One of the factors in GM's eroding share was that their most loyal buyers were in the oil patch and the Midwest," he said. "These areas were the worst performers in past years."

While most analysts picked GM, a few said Ford could lead the winners by adding another half-point or so of market share.

Keller: Chrysler will give up some sectors of high-volume profit and go after higher profit per vehicle

Gruet is one of them. GM's new entries won't be on the market long enough to make much of a difference in 1989, he said. GM's turn will come in 1990.

In the meantime, Ford stands to gain in 1989 because it is building so many of its products on overtime, Gruet believes. "In an environment where car sales are going down, Ford is in the strongest position and therefore would gain the most in market share," he said.

Kirnan: Renewed strength in the Midwest's economy will help GM's market share

Market-share dips, U.S.

Chrysler was the analysts' most frequent pick, but any lost share won't be substantial.

Chrysler will shuffle much of its product lineup during the year, and that could limit availability. Gruet suggested that some replacements — such as K-car successors' Spirit and Acclaim — will be less popular because they'll cost more than their predecessors.

Keller said Chrysler's declining share will reflect a strategic decision. "They're giving up some sectors of the high-volume profit and going after higher profit per vehicle," she said.

Some analysts think Ford and Chrysler will take a hit as GM improves its position. Others see a flat year. Said Beale: "I don't think it will be a year of dramatic changes in market shares. There will be a battle of tenths of points among the Big 3."

Gains in share, imports

The analysts named a range of Asian makers as likely gainers in 1989, with Toyota getting the nod most often. The chief reason is a full year of Camry production at its plant in Georgetown, Ky., as well as Corolla output from the New United Motor Manufacturing Inc. plant in Fremont, Calif.

Honda could also make some gains. Campbell believes the Acura line will grow stronger, and there will be increased production from the Marysville, Ohio, plant. Gruet also picked Honda, because of the overall strength of its lineup.

Nissan was also mentioned. Kirnan believes the new 240-SX, the restyled Maxima, the redesigned 300-ZX and the Axxess station wagon will contribute to a rebound. And that's not counting the late-year launch of the Infiniti models.

Still another Japanese maker got a nod. Luckey believes Mitsubishi will gain because of its new, U.S.-built Eclipse and its expanding dealer network.

Other nameplates mentioned were Hyundai and Subaru, both of which will have new four-door sedans on the market (Sonata and Loyale).

Knight: Rising interest rates will have an impact on consumer confidence

Losses in share, imports

There was no clear consensus on a single manufacturer here. But if the winners are going to be from Asia, the Europeans may be in for another rough year.

"There are so many little ones, they don't add up to one big guy at all," said Davis.

Luckey: Imported trucks may drop 50,000 units, to 550,000 sales

Yugo received a few mentions, as did Volkswagen.

Gruet, after a thoughtful pause, picked Mercedes. He believes the most expensive end of the market will weaken first in a down year.

"Mercedes demand held up well in 1988, so it may be more susceptible in 1989" he said. Its 190 series could also feel the pinch from Toyota's Lexus and Nissan's Infiniti entries when they arrive this fall.

Other companies mentioned included Sterling, Porsche, Isuzu, Mitsubishi, Mazda and Subaru.

Interest rates

Most analysts were in agreement on interest rates. They believe rates will climb a bit at the start of the year and reach a peak around the second quarter. As the economy slows down, the Federal Reserve will be able to loosen its grip on the money supply and rates will begin to fall, they said.

U.S. economic growth

The economy will slow down in 1989, according to the analysts. Growth, as measured by gross national product, will average about 2.56 percent, a significant drop from a stronger-than-expected 1988. And U.S. exports, rather than consumer spending, are expected to fuel the growth.

Said Knight: "Paine Webber's forecast for 1989 is not a death and degradation scenario." She's looking at a 2.8 percent growth rate. A primary factor will be rising interest rates, which she believes will have an impact on consumer confidence.

Kirnan is bullish about the manufacturing sector. The nation's export competitiveness will be significantly enhanced if the dollar falls below the 120-yen mark, he said.

Consumer confidence

On this subject, the analysts generally agreed: Consumers will be keeping a closer watch on their pocketbooks in the coming year.

A chief cause is the anticipated rise in borrowing costs and consumer prices. "Interest rates and inflation rates historically hurt buying attitudes," said Luckey.

The analysts believe consumers will be watching to see what kind of steps the Bush administration takes to reduce the budget deficit.

Pochiluk: Automakers will resort to "serious incentives" to entice buyers into showrooms

Pochiluk believes consumer confidence is clearly heading down. Consequently, manufacturers will resort to "serious incentives" to entice buyers into showrooms.

Automotive News Staff Reporters Louise Kertesz, Dutch Mandel and Philly Murtha in Detroit contributed to this report.

'88 car build tops '87 by a whisker

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers built 1,880,687 cars in the final quarter of 1988, 26.38 percent more than the third quarter's 1,488,090 and 7.87 percent above the year-ago quarter's 1,743,515.

The updated car production estimate for calendar-year 1988 stands at 7,101,953, slightly higher (0.10 percent) than the 1987 calendar year total of 7,094,992.

December's car output totaled 567,492, down 12.15 percent from November's 645,987 but 16.32 percent above the year-ago month's 487,877.

Automakers scheduled production of 116,612 cars last week, 10.70 percent more than the year-ago week's 105,338, when several plants were down for an extended holiday due to bloated inventory. Last week was shortened by the holiday.

Companies split last week's targeted production as follows: General Motors, 47.58 percent; Ford Motor Co., 28.79 percent; Chrysler Motors, 11.15 percent; Honda of America Manufacturing, 4.91 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.29 percent; New United Motor Manufacturing Inc., 2.57 percent; Nissan Motor Manufacturing Co. U.S.A., 1.33 percent and Diamond-Star Motors, 0.38 percent.

Truckmakers assembled 1,032,183 units in last year's fourth quarter, 10.26 percent more than the third quarter's 936,140 and 6.45 percent more than the year-ago quarter's 969,680.

The updated truck estimate for the 1988 calendar year is 4,133,886, 6.53 percent above the 3,880,342 built in 1987.

December production of 317,999 trucks was 11.36 percent below November's 358,746 but 11.39 percent above the year-ago month's 285,494.

Last week's scheduled truck output of 63,298 dropped 18.38 percent from the year-ago week's 77,551.

Canada cars up 26% for 1988

Canadian car production for the fourth quarter of last year totaled 225,433, up 21.23 percent from the third quarter's 185,957 but down 6.45 percent from the year-ago quarter's 240,983.

The updated calendar-year car estimate now stands at an 1,027,361, an increase of 26.84 percent over the 809,943 built in 1987.

December car output of 59,799 declined 24.37 percent from the November total of 79,071 and dropped 18.44 percent from the year-ago month's 73,323.

Truck output for the fourth quarter was 247,025, a gain of 28.39 percent over the third quarter's 192,399 and 25.29 percent more than the year-ago quarter's 197,158.

The updated calendar year truck production estimate is 933,838.

December's truck production of 71,174 was 21.98 percent below November's 91,224 but 23.83 percent above the year-ago month's 57,476.

Chrysler to revamp engineering

Castaing directs reorganization

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Francois Castaing, the new Chrysler Motors vice president of vehicle engineering, will reorganize Chrysler's engineering department by the end of this month in an effort to make the department more efficient.

Castaing and Chrysler's top engineers have been holding formal discussions on how to logically organize the 6,000-person engineering department. Sources familiar with the restructuring said the structure of the department, as well as individual responsibilities, are under review.

The company is said to be working quickly to finalize a reorganization plan within two weeks. Several reorganization plans are being considered, and rumors of early retirements, dismissals and structural changes are running rampant within the engineering department, sources said. These could not be confirmed, and a spokesman for Castaing declined comment.

One top engineer said those working in the department had been anticipating a reorganization since Castaing took Chrysler's top engineering post in October 1988. The French-born, former American Motors vice president replaced John D. Withrow, who retired.

"We are in the process of doing a reorganization in the aftermath of changing management; there are a new string of people that have different views," said one engineering supervisor, who spoke on the condition of anonymity.

There have been signals of the impending change. Chrysler engineers received a Christmas card from Castaing last month expressing his desire to return the company's engineering department to the automotive industry's best, according to one recipient of the holiday greeting.

There has been heightened attention to Chrysler's product and engineering competitiveness in the last year. The change was prompted by a blue-ribbon panel of technical experts, which had warned that Chrysler was becoming a truck and airplane company and neglecting its core car-making business. Dealers have pressed for new products and engine families.

The departments that report directly to Castaing include automotive research and technical systems, car body and chassis engineering, car electrical and electronic systems engineering, car powertrain engineering, car engineering operations, car development and program management and the Liberty development program.

Japan keeps quotas for '89

U.S. limit stays at 2.3 million; trade balance noted

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japan's Ministry of International Trade and Industry said it has decided to extend its voluntary export restraints on passenger-car shipments to the United States for another year, keeping them at the current 2.3 million.

MITI said the quotas have been extended because it has not yet determined whether Japan's downward trend in exports to the United States is an established fact. In the quota year ended March 31, 1988, exports were 85,851 units under the limit, the first shortfall since restraints were adopted in 1981, when shipments were inexplicably off by one unit.

Industry reaction bowed to the political inevitability of the decision, putting it in the context of the overall trade picture.

However, Japanese automakers feel the

Imports win suspension of MPV duty

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Under pressure from importers, dealers and at least one foreign government, the U.S. Treasury last week imposed a temporary suspension on a Customs Service ruling that would subject multipurpose vehicles to a 25 percent tariff.

Dealers and importers are seeking a 90-day suspension in order to press their cases for relief from the Customs determination.

Robert McElwaine, president of the American International Automobile Dealers Association, said he and other dealer representatives have been invited to a Tuesday meeting at Treasury to discuss the suspension.

Customs has also been told to warn importers they may be required to pay the 25 percent tariff following the suspension and should be prepared to post a bond to cover tariff obligations.

The Motor Vehicle Manufacturers Association, the Big 3 and the UAW supported the original Customs Service ruling, and all criticized the temporary suspension.

Chrysler Corp. Chairman Lee Iacocca was outraged by the decision and accused importers of using their dealers and lobbyists to turn the decision around.

"If the treasury caves in to this pressure in its final review, it would be an absolute outrage," Iacocca said in a prepared statement. "It would be a national disgrace. It would rip off the U.S. Treasury to the tune of approximately $500 million a year.

"I have been saying for years that Japan is dictating U.S. trade policy," he said. "This proves it."

In an earlier letter to Treasury Secretary Nicholas Brady, Iacocca supported the Customs ruling and urged him to "resist pressure from foreign manufacturers and their governments and their influential lobbyists to reverse the decision."

A trade lawyer representing the Automobile Importers of America said he could not remember a gov-

Chevy boss says Ford will win again in '89

By Michelle Krebs and David Versical
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Ford Division won the sales battle from Chevrolet for an unprecedented second straight year and is likely to remain in the No. 1 spot again in 1989.

Chevrolet General Manager Robert D. Burger, who will retire by July when he turns 65, predicted his division will not beat Ford in the 1989 calendar year but that it will close the gap — even though the Ford advantage widened in 1988. Burger said he is willing to bet Chevy will surpass Ford in 1990.

In 1988, Chevrolet sold 2,834,107 vehicles against Ford's 3,119,886. In 1988, the sales gap between the

Yugo board member quits for State Dept. post

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Lawrence S. Eagleburger, a Yugo America board member, has resigned his board seat to accept an expected nomination as deputy secretary of the U.S. State Department.

Eagleburger, who served as U.S. ambassador to Yugoslavia from 1977 to 1981, was one of five board members for the company, a subsidiary of Global Motors that imports the Yugo subcompact from Yugoslavia.

"We're pleased that we had a person of such high quality on our board," said Anthony T. Ciminera, Yugo America executive vice president for product planning.

"He was a real asset to us, especially with his ability to speak Serbo-Croatian. He was liked and respected in Yugoslavia, and he was able to get us straight answers," Ciminera said.

The resignation comes at a troubled time for the New Jersey-based company, which is experiencing falling sales and new-product delays. Meanwhile, Yugoslavia itself is embroiled in political and economic turmoil.

Negotiations were expected to begin this week that could change Global's ownership, with the Yugoslavian automaker reportedly buying a substantial share of the U.S. firm.

The negotiations reportedly involve Global Motors; Mabon Nugent, a New York investment firm; and Zavodi Crvena Zastava, the parent company of Zastava Yugo Automobili, which makes the Yugo car.

Mabon, Nugent led a group of private investors that bought out Global Motors founder Malcolm Bricklin last April for some $40 million — about $20 million for Bricklin's 70 percent interest, plus another $20 million for operating funds and product development.

A Mabon, Nugent spokesman said last week that the investment firm and its affiliates own about 33 percent of Global Motors, representing an investment of approximately $10.5 million.

Mabon, Nugent and Global Motors have refused to identify the other investors.

"Mabon, Nugent has really nothing to say at this point," said spokesman Jim Fingeroth. He did not confirm or deny the reported negotiations for Global Motors.

A U.S. Commerce Department spokesman said last week that the Yugoslavian manufacturer is operating in a difficult economic environment. Economic problems marked by strikes and protests forced the resignation of Prime Minister Branko Mikulic and his cabinet last month, followed by the resignation last week of government and Communist Party leaders in Montenegro, one of Yugoslavia's six autonomous republics.

"The economic problems that caused the government to resign are the same ones Yugo has faced," said Jeremy Keller, Yugoslavia desk officer for the Commerce Department.

Keller said the Yugo plant, located about 100 miles south of Belgrade, is in an area that has seen "plenty of strikes and unrest." Zastava itself has apparently remained stable through the unrest but the protests are only a symptom of a more widespread economic shakeup, Keller said. The poor state of the economy has made parts sourcing difficult.

"The problems they (Zastava) are facing are purely economic, as opposed to any protests or unrest," Keller said.

"I've heard reports that they have trouble getting bits and pieces from their suppliers, so they have half-completed Yugos stacked up at the plant," he said.

The introduction of new models also has been slow, Keller said. Yugo was to have introduced a convertible as a 1988 model, but as of last week Yugo America had only two prototypes of the convertible in North America.

A letter sent by Yugo America last fall sought to reassure dealers that "hard-currency projects with the West — such as the Yugo America project — are high on Yugoslavia's list of economic priorities."

Ciminera said that Yugo America won't comment on domestic Yugoslavian politics, though he said Zastava enjoys a "protected position" within the economy.

Keller pointed out that Yugoslavia, which is a non-aligned nation, enjoys Most Favored Nation status as a trading partner, and the Commerce Department officially encourages trade between the two countries.

Meanwhile, President-elect George Bush last week announced his intention to nominate Eagleburger as deputy secretary of state, which would make him second in command behind James Baker, Bush's choice for secretary of state.

Prior to his nomination, Eagleburger was president of Kissinger Associates, a consulting firm headed by former Secretary of State Henry Kissinger. Eagleburger was a top adviser to Kissinger during the Nixon administration.

He joined the Yugo America board in February 1985, the year the Yugo was introduced in America.

Eagleburger retired from the State Department in May 1984, after 27 years as a Foreign Service officer.

VW retains sales crown in Europe

Fiat says race is too close to call

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — In a photo finish, Volkswagen AG apparently edged Fiat Auto S.p.A. for the European car-sales crown by only 1,500 units, unofficial industry figures show.

It is the fourth year in a row VW has come out on top.

The overall market in Western Europe soared to record heights in 1988, finishing just a shade under 13 million units, according to industry estimates compiled by Automotive News.

The total grew 4.6 percent to 12,989,900 compared with 12,413,400 in 1987, the previous record.

Fiat was in first place for 11 months, surrendering the lead to VW in December. In selling 1,929,900 Volkswagens to Fiat's 1,928,400, the West German maker edged its competition out by less than a tenth of a point in market share.

Fiat is not yet conceding, however. In Fiat's figures released late last week, the company said it sold 1,930,000 cars, which would be a higher than industry estimates of VW results.

VW has yet to release its figures.

Europe's other big winners in 1988 were Peugeot S.A. and BMW, both of which substantially boosted market share.

The Japanese were a relatively quiet presence in the marketplace. Combined, Japan automakers closely mirrored the overall market growth in 1988 and then dipped during December to finish with a rate of increase under the market.

West Germany again was Europe's biggest national market by a wide margin even though it was the only major country to suffer a decline in 1988.

VW figures include the corporation's Volkswagen, Audi and Seat brands. Fiat numbers reflect Fiat, Lancia, Alfa Romeo and Ferrari. Ford was once again the best-selling single brand in Europe.

The widely forecast drop in Europe's four-year boom still hasn't emerged. Sales dipped in October but increased in November and December. Last month, volume climbed 4.9 percent over December 1987, rising to 926,200.

VW is now benefiting from improved supplies of its new Passat mid-range car, which had a slower-than-anticipated production start-up curve. Passat demand has been strong, and Golf remained Europe's best-selling car in 1988. Combined Golf/Jetta sales in 1988 totaled 819,700 units.

Altogether, VW claimed 14.9 percent of the European market and boosted unit sales 3.9 percent. The marque's sales rose only 1.7 percent to 1,282,300 in 1988. Audi, though struggling in the German domestic market, did well elsewhere in Europe and finished with a gain of 5.6 percent at 371,900.

VW Group received a big boost from Seat. Seat sales rose 12.7 percent to 275,700 with help from the continuing Spanish boom and in-

Customs finds 'sham,' ups Nissan steel duty

By Lindsay Chappell
and Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTERS

U.S. Customs has ruled that Nissan Motor Manufacturing Corp. must begin paying a higher duty on steel it imports for U.S. truck assembly.

The transplant operation will be paying between $350,000 to $400,000 more in import duty to manufacture trucks in Smyrna, Tenn., as a result of the decision.

After considering the matter for more than two years, Customs informed Nissan that its method of handling imported rolled steel coil to qualify for reduced duty payments constitutes a "sham transaction," and ordered the company to begin paying duty at a higher rate.

The decision means that Nissan must now pay a duty of between 4 percent and 6.5 percent for imported steel it uses for truck production in Tennessee, rather than the 3.1 percent duty it had been paying.

Estimates are that the plant consumes between $11 million and $12 million worth of imported steel a year to produce 100,000 pickup trucks. At that rate, the Customs order to increase the duty payments would boost the operation's annual tariff costs from approximately $350,000 to about $720,000.

The U.S. government protects the steel industry through a system of voluntary quotas.

"Sham" transactions were possible because Nissan's plant is covered by a foreign-trade subzone. When Nissan first began manufacturing trucks in Smyrna, the transactions were allowed under the laws covering the zones.

Nissan would import steel coil duty-free to its subzone at the Tennessee plant, a commodity that normally carries an 8 percent duty, and stamp it into chassis and body parts. It then moved the components to a site at the plant where there was no subzone status. The company then claimed the components had entered into U.S. commerce, paid the lower duty on the parts and then brought the components back to the assembly line as a domestic product, exempt from further duty payment.

Revisions in trade subzone practices in 1986 prohibit the practice, however. Those procedures only allow importers to reduce the duties they pay on imported materials if the finished product actually enters U.S. commerce.

When the regulations were revised in 1986, the company requested a ruling on its practice. It was answered last month, one week before its year-end plant shutdown.

The holiday season timing meant that company officials didn't learn of the government decision until the plant reopened early this month. By that time, about 2,400 pickup trucks had been assembled in noncompliance with the Customs decision. As a result, the company was assessed at the 25 percent tariff applied to imported trucks.

"I take great exception to this reference to our activity being a 'sham' operation," said Nissan general counsel Gail Neuman. "The entire transaction was originally approved by the Foreign Trade Zone Board. We're the ones who raised the issue in the first place."

Neuman acknowledged that the annual cost of the ruling to the manufacturer would be in the six-figure range, but said Nissan would not contest the decision.

"In the long term, this will have no effect on us," Neuman said. "We have been increasing our use of domestic steel for the past several years, completely divorced from this issue, and we will continue increasing until we use entirely domestic steel. About 45 percent of our steel already comes from the U.S.

"Depending on when the domestic producers are able to come up to the standards to meet our specifications, our plan is to eventually use only domestic steel."

She said Nissan hopes to use only domestic steel by the time it begins production of its third vehicle at the Smyrna plant in 1991. The facility currently manufactures pickup trucks and Sentra sedans.

"In the meantime, we will not contest the ruling and we will pay the higher duty," she said.

Starcraft launches new lease program for van conversions

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

In what is believed to be the first such program in the van-conversion industry, Starcraft Corp. will begin on Feb. 1 to offer its own Starcraft Lease program to the 1,000 dealers handling its products.

The program is designed to reduce monthly lease payments. It will be administered and underwritten by Auto Use, the Andover, Mass.-based subsidiary of Bill DeLuca Enterprises, which operates four East Coast dealerships. The dealerships are Bill DeLuca Chevrolet, Haverhill, Mass.; William Pontiac, Haverhill; Woodworth Chevrolet-Cadillac, Andover; and Village Buick, Andover.

Auto Use currently has about 15,000 vehicles out on lease through 400 dealers, said Michael Cook, company president.

Don Cuzzocrea, Starcraft chairman, said its program grew out of Bill DeLuca Chevrolet's experience with leasing Starcraft vehicles. The dealership found the vehicles retained better residual, or trade-in, values than allowed by banks or financing institutions, including automotive financing arms like General Motors Acceptance Corp.

Most leasing institutions don't fully credit the conversion portion of the vehicle, frequently worth $5,000 or more, in their assessment of its resale value, he said.

"The advantages of our program, as we see them, are that because the leasing people (Auto Use) are familiar with Starcraft vans, they're willing to give a little better terms, to give a higher residual value and better trade-in value for the vehicle 60 months down the road," he said.

"The key thing is that it's strictly voluntary for the dealer. It's just an extra profit source for him to finance and sell the vehicle. We're not forcing him to take our program, and there's no risk for the dealer," he said.

Auto Use currently will advance more than a vehicle's list price — if necessary — on the cars it leases, providing the margin to customers who might be "out of equity on the trade-in," for example, Cook said.

"Dealers should be able to quote a better payment and quicker payment to the customer," he said.

Customized vans tend to be rather expensive, often costing $20,000 or more.

"The payments for purchasing them are very substantial," Cook said. "The more expensive the vehicle, the greater the attraction of leasing because of the differential between buy payments and lease payments. This is an alternative way to finance to meet people's budgets easier."

Auto Use typically disposes of vehicles by wholesaling or retailing them, sometimes through its own dealerships. It rarely runs them through auctions.

"We think there's an awfully strong future in leasing," said Cuzzocrea.

Starcraft, in its overall van-conversion operations, is emphasizing lower-priced models in 1989 in response to competition from small, low-overhead conversion companies.

Its general goal is to "put more of our product into consumer hands at a better price," Cuzzocrea said.

"Our new program is just one more exclusive plus we can offer the dealer what the little guy (small converter) can't. When you compare us to small converters, they don't have parts catalogs, service manuals, brochures, training programs and now — leasing," he said.

Michael H. Erdman: on Chevy's front line AUTOMOTIVE NEWS/JOE WILSSENS

Mr. Chevy Marketing

Erdman's policies draw praise and fire

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

When Chevrolet Marketing Manager Mike Erdman finds spare time, he hunts wild ducks and pheasant in remote sections of Northern Michigan.

But lately, Erdman has been stalking bigger game, namely Ford Motor Co. and a host of import competitors.

The arsenal he has prepared includes streamlined field operations to help the branches respond quicker to the market, a mandatory fee paid by dealers to boost Chevy's advertising presence and a marketing staff organized in teams, each assigned to one specific vehicle line. Erdman's product ammunition includes the Geo line, which is sending Chevrolet on a new path in selling its imports and joint-venture models, and a family of vehicles aimed at unseating Ford Taurus.

The candid, chain-smoking marketing chief knows that if Chevrolet's aim is off, the prey will not fall. It will only come on stronger.

"Incumbent on the strategy is execution; there are no latitudes for mistakes any more," said Erdman, who took the reigns as Chevrolet's general marketing manager in May 1988.

Although he is not considered to be among the frontrunners for the job that Chevrolet General Manager Robert Burger will exit with retirement this year, Erdman has been on the front line of many controversial and daring moves the division has executed recently in an attempt to regain former glory.

When Erdman joined Chevrolet as a parts clerk in 1962, the division sold about one of every three cars, when 59 car nameplates competed in the United States. In 1988, Chevrolet sold about one of every seven cars in the same market with 43 brands. But perhaps most galling to Erdman is the fact that Chevrolet sold fewer cars and trucks than arch-rival Ford Division for the last two years.

"The nature of Mike Erdman is, I don't like to be in second place to anyone doing anything; (Ford) didn't get into first place overnight, so you are not going to take them out of first place overnight, either," Erdman said, leaning over his desk for emphasis.

The pressure to regain sales leadership makes Erdman's job as Chevrolet's chief marketing strategist one of the toughest in the industry.

Chevrolet dealers and observers say Erdman's no-nonsense, straightforward approach could be just what General Motors' top-volume car and truck division needs.

"Mike doesn't much care for talking about doing things; he's a doer," said Sean K. Fitzpatrick, vice chairman and director of creative services of Lintas:Campbell-Ewald, Chevrolet's advertising agency for all regions except the West Coast.

"He's doing things now that should have been done a long time ago at Chevrolet. He's the Vince Lombardi of automotive marketing — he stresses the basics," Fitzpatrick said.

"When I think of Mike Erdman, I think of a guy that's a part of the new Chevrolet," said John Bergstrom, chairman of the Chevrolet National Dealer Council and owner of Bergstrom Chevrolet in Neenah, Wis.

"He's not the typical 1960s and 1970s we-sing-off-the-same-song-sheet Chevrolet. He's a symbol of what the automotive industry is going to be like in the 1990s," Bergstrom said, noting Erdman's tendency to listen intently before making a decision.

Ford slices price-leader loan rates

By Laura Clark and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

Citing consumer concern over rising interest rates, Ford Motor Co. last week announced a round of low-interest loans on its lowest-priced cars and trucks.

Cadillac, meanwhile, announced lease incentives on its most expensive models.

Ford's new incentive program is the first national low-interest loan program it has offered in 16 months. The program began Jan. 11 and ends March 2.

Low-interest loans are available on 1988-1989 Ford Escort, Festiva and Ranger models: 4.9 annual percentage rate for 24 months; 6.9 APR for 36 months; 8.9 APR for 48 months; and 9.9 APR for 60 months.

On 1988-89 Mercury Tracer models, buyers can receive 4.9 percent APR for 24 months; 5.9 APR for both 36-month and 48-month loans; and 7.9 APR for 60 months.

Ford is also offering California buyers of 1988-89 Tracers a 3.9 APR on 24-month loans.

As an alternative to the low-interest-rate loans, customers can receive the following rebates: $300 on Festiva L; $400 on Festiva L Plus and LX; $500 on Escort; $500 on 1989 Rangers equipped with automatic transmissions; $750 on 1988 Rangers and 1989 Rangers equipped with manual transmissions (excluding Ranger S); and $750 on Tracer.

Although low-interest loans are not included on the following models, rebates are being offered: $3,000 on all Merkur XR4Ti models; $2,000 on 1988 Scorpio (retail purchase only); $1,000 on 1988 Ford Thunderbird Turbo Coupe; $1,000 on 1988 Mercury Cougar XR-7; $600 on 1988 Thunderbird, Cougar and Bronco II; and $600 on Mercury Topaz and Sable.

Also, there is a $500 rebate on all Ford Tempo models, standard-length Ford Aerostars and F-250, F-350 and F-Super Duty trucks equipped with manual transmissions; $500 on Taurus L, GL and LX models; $400 on all Mustang models equipped with 2.3-liter engines; and $400 on Mustangs equipped with V-8 engines sold in California.

There is no dealer participation cost for the new Ford incentive program. Consumers must take delivery of the vehicles before the March 2 deadline.

Cadillac launched a new lease program covering its top-of-the-line cars.

Special lease rates, which have terms of up to 48 months, are available on new 1988 and 1989 Seville, Eldorado and Brougham models. The program expires March 31.

The program also covers 1989 demonstrator models with less than 5,000 miles and 1989 supplier-program purchases.

Cadillac said it will support the new lease program with major print and television advertising.

Trotman climbs; Halstead heads Ford Europe

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — For the second time in less than a year, Ford Motor Co. has transplanted the head of its European operations to an upper-level post in the United States.

Alexander J. Trotman, chairman of Ford of Europe, will become executive vice president — operations, North American automotive operations, on Feb. 1.

The move positions yet another executive closer to the top of a company that is grooming potential successors to Vice Chairman Harold Poling and Chairman Donald E. Petersen. They are due to retire in 1990 and 1991, respectively. In the last 15 months, Ford has named three new executive vice presidents, bringing the ranks directly below Petersen and Poling to seven.

Trotman

Halstead

L. Lindsey Halstead, 58 will take over for Trotman. Halstead, who until recently had been vice president of Latin American and Asia-Pacific operations, was put on special assignment at Ford of Europe Dec. 1, in apparent preparation for his new job.

Trotman, 55, assumes a post that has existed on the company charts but has been vacant for nearly a decade, a spokesman said. He will be responsible for sales, manufacturing, truck operations and car product development. He will report to another executive vice president, Louis R. Ross.

Trotman became chairman of Ford of Europe last March when his predecessor, Kenneth Whipple, came to the United States as executive vice president overseeing the Ford financial services group. Before that, Trotman was president of Ford of Europe for four years.

A native of Great Britain, he joined Ford of Britain in 1955. In 1969 he came to the United States and held jobs in marketing, product planning and truck operations. He is a U.S. citizen.

Halstead, who joined Ford in 1952, brings a good deal of international experience to his new position. He has been general manager of Ford of Mexico and director-president of Ford of Brazil.

In another senior executive move, Ford announced last week that Frederick Z. Herr, vice president — product assurance, will retire March 1 at the age of 63.

Besides Trotman, Ross and Whipple, Ford executive vice presidents are Stanley A. Seneker, chief financial officer; Philip E. Benton Jr., president, Ford automotive group; John A. Betti, diversified products operations; and Allan D. Gilmour, international auto operations.

Light trucks roll to 5th consecutive record year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Compact vans and full-sized pickups were the big driving forces in 1988 behind the light-truck market's fifth consecutive sales record.

However, all industry segments except small pickups had some sales gain in the year. Light-truck sales totaled 4,872,633 units.

Calendar 1988 was the big turnaround year for full-sized pickups whose sales shot up 10.14 percent to 1,329,579 units.

Reasserting themselves as the industry's largest segment, they captured 27.29 percent of the light-truck market, up from a 25.86 percent share in calendar 1987.

Compact pickups, which had previously led the industry, dropped like a rock.

Once the Japanese yen began soaring, imported pickups, which created and drove this segment during its formative years, lost a good deal of their appeal.

Compact pickup sales of 1,310,487 in calendar 1988 were off 6.69 percent from the previous year. The segment's market share dropped to 26.89 percent from 30.08 percent in 1987.

Compact vans continue to be the busiest segment, pulling ahead of compact sport utilities in both volume and growth.

The two had run neck-and-neck in 1987, but in 1988, minivan sales soared to 818,741, up 18.99 percent.

Minivans accounted for 16.80 percent of light-truck industry sales in 1988, up from a 14.74-percent share in 1987.

The minivan total would have been 22,802 units stronger if Mazda's MPV, Mitsubishi's Van/Wagon, Toyota's Van and Volkswagen's Vanagon were included. These makers categorize those vehicles as cars, even though they belong in this truck segment.

TRUCK SALES UP IN NEARLY EVERY SEGMENT

	1988	1987	% Change	% Market
Big pickups	1,329,579	1,207,152	+10.14	27.29
Compact pickups	1,310,487	1,404,431	− 6.69	26.89
Big vans	479,838	471,862	+ 1.69	9.85
Compact vans	818,741	688,085	+18.99	16.80
Big sport-utilities	213,356	206,057	+ 3.54	4.38
Compact sport-utilities	720,632	690,896	+ 4.30	14.79
TOTAL LIGHT TRUCKS	4,872,633	4,668,463	+ 4.37	100.00

Compact sport-utility sales climbed to 720,632, up only 4.30 percent from the year earlier. They captured 14.79 percent of the light-truck market, almost equal to their 14.80 percent share in 1987.

This segment, too, was stymied because of a slide in import sales. Suzuki, which had been a major sparkplug on the import side, suffered sharply declining sales in 1988, as a result of both the controversy surrounding the safety of its Samurai and higher prices triggered by the strong yen.

Toyota's switch to reporting 4Runners as cars also clouded the segment's performance. The 4Runners, which Toyota reported as part of its truck sales last year, dropped to 7,723 from 31,424 in 1987. However, the 4Runners that it calls cars had sales of 20,880, up from 3,635 in 1987.

Toyota also sold another 6,024 Land Cruisers, a larger sport-utility, which it excluded from its truck sales.

Sales of big sport-utilities increased 3.54 percent in 1988, to 213,356 vehicles. The segment's market share of 4.38 percent held closely to the 4.41 percent share of the previous year.

Full-sized vans, which were production capacity-constrained, scored only a 1.69-percent sales increase to 479,838 units.

The segment's market share of 9.85 percent was off from a 10.11-percent share in 1987, as its increase in sales failed to match that of the entire light-truck industry.

NISSAN

Dealers-owned firm will sell insurance

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Nissan Motor Corp. in U.S.A. and Rollins Burdick Hunter, a Chicago-based insurance brokerage, are forming a "captive" business insurance company that will be wholly owned and operated by Nissan dealers.

A first for the auto industry, the new company is scheduled to begin operations by April. Nissan hopes it will give dealers greater control over the cost of many of their insurance coverages, such as property, liability and workers' compensation, said Thomas D. Mignanelli, Nissan Motor executive vice president.

"Over the years, one of the most uncontrollable elements of (dealers') operating budgets has been the cost of insurance," he said. "Dealer insurance premiums undergo huge price swings from year to year. By participating in their own insurance risks, the dealers eventually should be able to stabilize the cost of their insurance."

Nissan and Rollins Burdick Hunter will send representatives to the National Automobile Dealers Association convention Jan. 28-31 in New Orleans.

Ninety percent of Nissan's 1,100 dealers said they wanted to do something about their insurance costs, said Charles Small, vice president of the insurer's Rollins Burdick Hunter Direct Group. Seventy-five percent said they were interested in investing in a captive operation.

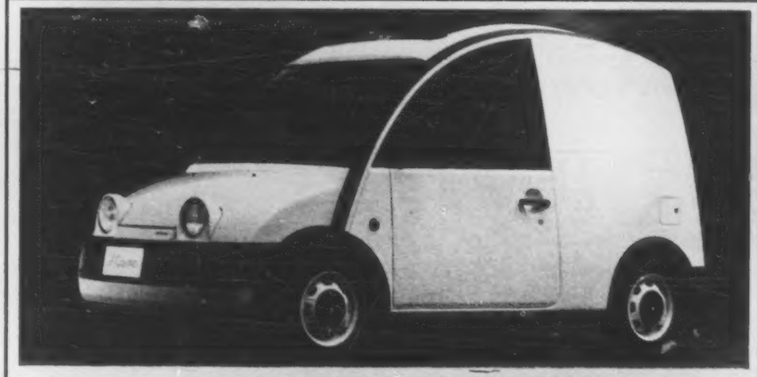
"Nissan dealers realized the insurance companies put them in the same category as other franchise owners," said Small. "By sharing in the insurance risk, they will begin to develop a keener interest in loss control and begin to stabilize their insurance costs."

Under the plan, insurance coverage will be offered through Reliance Insurance Co. The Nissan captive firm will work with Reliance to develop underwriting and loss-control guidelines and will re-insure a portion of each policy issued to participating dealers.

Nissan Motor Corp. will advance the expenses incurred in connection with the startup venture and is to be reimbursed from the capital raised.

The stock in the holding company for the captive insurance firm will be offered by prospectus only.

Nissan dealers and their affiliate franchises will be eligible to invest in the new company, as will franchised dealers for Infiniti, Nissan's new upscale division. Nissan dealers will be able to use the insurance to cover other franchises they hold.



S-Cargo and Pao debut
Two vehicles shown as concept cars at the 1987 Tokyo Motor Show have been launched in Japan. S-cargo will cost between $9,760 and $10,640, while the Pao is priced from $11,080 to $12,380. Production numbers haven't been fixed, but Nissan said it will take S-Cargo orders for two years and Pao for three months.

Sakaino named U.S. Isuzu chief

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

WHITTIER, Calif. — Kozo Sakaino has been named president of American Isuzu Motors, succeeding Masashi "Gene" Suzuki.

Sakaino

Sakaino, 47, has been senior vice president — manufacturing relations for American Isuzu and is considered a marketing specialist.

After serving two years as president of the U.S. sales arm of Isuzu Motors, Suzuki is being transferred back to the Japanese parent company. His new duties were not announced, but are expected to be in manufacturing, where the bulk of his professional background has been.

Sakaino said 1989 and 1990 will be challenging for American Isuzu.

"Isuzu needs to develop specific new products for the U.S. market if we are to successfully compete through the 1990s," Sakaino said.

Sakaino's primary focus will be on American Isuzu's regional marketing needs and national priorities and communicating product requirements to Japan "in a manner that is both credible and fundamentally efficient," he said.

Sakaino and Jack Reilly, senior vice president and general manager, are known to agree that Isuzu's future marketing success lies in increased regional emphasis rather than continued centralization.

Sakaino, with his experience in coordinating American Isuzu's marketing efforts with the production side of the Japanese company, will help prepare American Isuzu Motors for the opening this fall of the Subaru-Isuzu joint-venture assembly plant in Lafayette, Ind. That plant will provide pickup and Trooper II models for Isuzu's U.S. unit.

While giving Isuzu two production sources, the startup phase of the new operation will require deft balancing of sourcing, increased volume and satisfying dealers that have invested heavily in anticipation of higher vehicle availability.

Sakaino is a graduate of Tokyo's Keio University. He is a 25-year Isuzu veteran with a variety of overseas assignments. He was appointed Isuzu's chief representative to Indonesia in 1975, when sales were less than 30 units a month. When he left two years later, annual sales were 25,000.

He later was reassigned to Indonesia as chief representative of a joint-venture operation with General Motors.

As manager of Asian development in 1984, he had market development responsibilities for Malaysia, Indonesia, Hong Kong and New Guinea. In 1985, his last position before taking U.S. duty, Sakaino was assigned to Isuzu's overseas development team, concentrating on new ventures in Australia, India, Taiwan and Great Britain.

Penske acquires GM's overseas diesel business

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

The bond between auto entrepreneur Roger Penske and General Motors grew stronger last week as Penske exercised rights to acquire GM's overseas heavy-duty diesel engine business for his Detroit Diesel Corp.

Terms of the agreement were not disclosed.

Detroit Diesel has formed a trading company called Detroit Diesel Overseas Distribution Corp., and overseas subsidiaries in Singapore and Switzerland formerly owned by GM have been reorganized into wholly owned subsidiaries of Detroit Diesel.

Additionally, two subsidiaries have been formed in Switzerland — Detroit Diesel Suisse SA, which will handle sales in Switzerland, and Detroit Diesel Europe SA, which will handle European sales.

With a combined workforce of 60, the two European subsidiaries will be responsible for diesel engine sales in 16 countries.

Prior to the Detroit Diesel acquisition, some 75 persons were employed by the predecessor GM overseas operation. According to a Penske spokesman, the "10 or 15 who are not part of the new group have either taken retirement" or have moved to another GM company. He said none were laid off.

Through the overseas trading company, Detroit Diesel will expand the role of its newly acquired Australian distributor, Detroit Engine and Turbine Co., from a sales and service organization to an authorized importer and engine modifier, as well. That will allow sales to Australia's original-equipment manufacturers. The Australian unit will retain its 650-member workforce.

"The sales we make will increase two ways," said Paul A. Moreton, Detroit Diesel Corp. vice president of international sales. He said as its own overseas distributor, Detroit Diesel will no longer pay GM a licensing fee, as it did in 1988, thereby reducing costs.

Moreton said Detroit Diesel is heavily targeting overseas sales as a growth area in the coming year, and to help that along, it will increase the number of heavy-duty-engine models available in those markets.

In 1988, Detroit Diesel had $840 million in sales, and this year's projections are up 17.5 percent, Moreton said. That projected growth is partially based on an effort to concentrate on markets that previously received little attention — diesel generators and marine and pleasure craft businesses.

Pacific Power, a wholly owned subsidiary of Detroit Diesel based in Singapore, will be run by John Cousins, a 15-year veteran with Detroit Diesel and Allison.

The acquisition of GM's heavy-duty-engine overseas distribution system is the third cog in a GM-Penske wheel. Following the sale of 60 percent of Detroit Diesel Allison Division to Penske Transportation of Wilmington, Del., in 1987, Penske exercised an option to purchase an additional 20 percent in the newly named Detroit Diesel Corp.

The second option allowed Penske to buy from GM its Rochester Products Division, a group that included Rochester fuel injectors for heavy-duty trucks. That transaction was completed in November 1988.

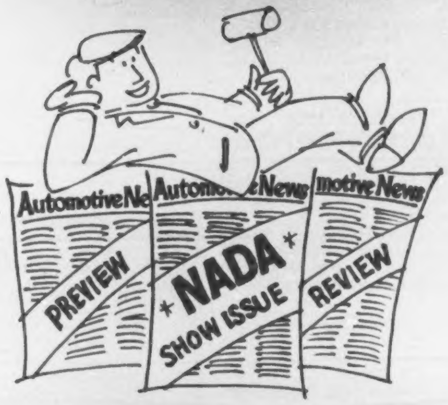
Want to reach virtually EVERYONE in the auto industry with news of your BIG SALE? Here's the place: the Auction Directory Section of Automotive News.

ATTENTION AUTO AUCTION OWNERS:



THREE BIG NADA ISSUES PUT YOU IN TOUCH WITH THE DEALERS YOU WANT TO DO BUSINESS WITH

Automotive News

The Automotive News NADA Preview, Show and Review issues. For high dealer readership, here's your best opportunity for Auction Directory advertising.

Your auction directory ad reaches the dealers at the show as well as those who stayed behind. Because Automotive News goes to virtually every dealer in the country. Dealers who ranked Automotive News "most useful" in their business.

And at NADA, your auction ad gets bonus exposure. We'll be distributing extra copies of the Preview and Show issues right at the convention. Of course, dealers unable to attend will rely on Automotive News for complete NADA coverage — the next best thing to being there.

So, catch the NADA excitement . . . and the business. Place your auction directory ad in all three big NADA issues. Call Marie Hingst at (313) 446-6065.

Chrysler TC is $30,000 — and no extras

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

INDIAN WELLS, Calif. — After years of delays, the Chrysler TC by Maserati has officially joined the luxury sport coupe market in the United States.

Chrysler TC, a combination convertible/hardtop two-seater designed and engineered by Chrysler Motors and Maserati S.p.A., is being introduced at "$30,000, fully equipped and very competitive," said Joseph A. Campana, vice president of Chrysler-Plymouth Division.

"All equipment is standard. There are no extra-cost options," he said. "Buyers need only select color and choice of drivetrain."

The 1989 Chrysler TC is built by Maserati in Milan, Italy, and imported for sale by 318 specially franchised Chrysler dealers in the United States.

The car is first being supplied to 50 dealers in California, and to other major U.S. markets over the next few months. All Chrysler TC dealers will have cars by summer, Campana said at the car's launch here.

After California, dealers on the East Coast — New York to Miami — will get cars, followed by dealers in the Central United States.

Campana said Chrysler will build "roughly 3,500 TCs in the first model year, which ends in September, and we will sell them all." He also predicted that Chrysler would "sell out the plant" in the second model year when Maserati produces between 4,000 and 5,000 TCs.

The TC is built on a 93.3-inch wheelbase, measures 175.8 inches long overall and has a curb weight of 3,200 pounds. The car is 68.5 inches wide and 51.9 inches high.

The front-wheel-drive TC features an electronic fuel-injected, intercooled, four-cylinder, single-overhead cam 2.2-liter turbo engine producing 160 horsepower at 5,200 rpm. A 16-valve double-overhead cam version of the engine produces 200 hp at 5,500 rpm. The 16-valve engine is offered only with a Getrag five-speed manual transaxle, while the turbo is equipped with a three-speed automatic.

An anti-locking braking system developed by Teves is standard and used in conjunction with four-wheel disc brakes.

The car also features a handcrafted Italian leather interior, Chrysler-Infinity sound system with power antenna, automatic temperature control system, six-way power reclining bucket seat, tilt-steering column and power exterior mirrors that are electrically heated.

Chrysler TC by Maserati has a removable top

Other standard features include automatic speed control, an illuminated entry system and remote control switches to open the hood, trunk, fuel filler door and tonneau cover. The exhaust system is stainless steel with chrome tips.

Side mirrors, door handles and side moldings are the same color as the body, which is available in exotic red, royal Cabernet and light yellow.

The folding top is fully lined, manually operated and stowed beneath the metal tonneau cover. With the soft top in the up position and latched at the windshield header, an electrically operated mechanism pulls down on the rear bow to make the fabric taut.

The molded removable hardtop is provided at no extra cost. The hardtop has beveled glass opera windows and an electrically heated rear-window defroster.

The TC interior features a wraparound instrument panel and hooded instrumentation pod with circular analog gauges. Instrumentation includes an electrically driven speedometer-odometer, which eliminates cables and is said to improve cluster removal and service. A padded leather center armrest serves both front seat occupants.

Behind the front seats is a fully carpeted, lockable storage compartment. It contains a minispare tire, tool kit and an umbrella in a clip holder.

The passenger compartment features leather seats and side panels.

The car is covered by a 5-year/50,000-mile limited warranty, Chrysler's Crystal Key luxury car care program. The powertrain warranty extends to 7 years/70,000 miles, while corrosion protection against exterior body-panel perforation is 7 years/100,000 miles.

"The warranty details are simple and straightforward," Campana said. "The owner takes care of normal maintenance, adjustments and wear items. Chrysler takes care of everything else. Everything. No exceptions, no deductibles."

Campana said the entire Chrysler line will benefit from the prestige ruboff of selling the TC.

" 'Made in Italy' says something prestigious and special about a sports car," he said. The name Maserati means something prestigious and special as well, he added.

"We're going to position TC as a unique new Chrysler image car with the attributes and craftsmanship of high-priced European luxury convertibles.

"The word 'unique' is important," Campana said. "We're not positioning this car on top of Mercedes, priced at $64,000.

"We are being realistic about that. Frankly, we learned some lessons from the (Cadillac) Allante experience. We are positioning the TC as a car that is totally made in Italy."

In reference to the TC's pricing, Clark Vitulli, Chrysler general marketing manager, said, "This is not a volume car for us, not a profit car. We're building the TC not for what it will make us, but where it will take us."

Vitulli said one of the biggest surprises of the Chrysler TC is its $30,000 price.

"We are pricing the TC under virtually every competitor in the price segment — less than half the price of Mercedes 560-SL ($64,230) and almost half the price of Allante ($57,183)," Vitulli said.

"While the Reatta appears to be priced lower, Reatta is available in hardtop only. They will not have a convertible until late 1989. Even then, it will remain, of course, a domestically produced car."

Campana said Chrysler will use the "rifle shot rather than a shotgun approach" in TC advertising.

"A broad advertising approach would not be very effective with this type of car. We will begin with regional advertising on the West Coast and eventually spread eastward," he said.

No national television advertising is scheduled. The main advertising thrust will be in upscale print media.

AXXESS

Nissan's 1990 MPV set for sale in March

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — Nissan will begin selling the Axxess, a newly designed multipurpose vehicle, in March as the first entry in its 1990 lineup.

The Axxess will debut Jan. 30 at the Nissan Los Angeles Golf Tournament.

Said to offer the utility of a van, but in a smaller package delivering the performance of a sedan, the Axxess will replace both the Stanza and Maxima wagons in Nissan's line.

"We see Axxess as an upscale, modern alternative to the traditional sedan/wagon or minivan," said Robert J. Thomas, Nissan Division general manager. "It was designed to compete among the mid-sized wagon, multipurpose vehicle and compact bus segments."

Thomas predicted the market will be receptive to the Axxess and projected annual sales of 18,000 for the 1989 and 1990 model years.

Axxess buyers are expected to be married, 30- to 44-year-old college-educated professionals from all income categories, he said.

Axxess offers one trim level available with a choice of front- or all-wheel drive. Nissan expects fwd to take 85 percent of the model mix.

The all-wheel drive works full time, using a viscous coupling providing automatic torque transfer between the front and rear axles and between the rear wheels. The system is designed to improve traction on wet and snow-covered roads and to reduce wheel spin for cornering and acceleration.

A full-time, all-wheel-drive Nissan Axxess also will be offered

The Axxess has the same 12-valve, 2.4-liter, inline four-cylinder engine found in the Nissan 240-SX. It has a fully independent suspension wrapped in an aerodynamic 0.36-drag-coefficient body. The engine features an electronic multi-point fuel injection system and produces 138 horsepower at 4,400 rpm.

The seats can be arranged to carry cargo or to haul five adults.

Axxess is said to be the only vehicle with sliding doors on both sides. Its high ceiling, low, flat floor and single rear liftgate can accommodate up to 800 pounds of cargo.

Nissan said it has certified Axxess to meet all car safety regulations. Standard features include motorized passive seat belts up front, outboard three-point seat belts in back, 5-mph bumper, side-door beams, roof reinforcement, shift interlock system and a high-mounted brake light.

Additional standard equipment includes power rack-and-pinion steering, power door locks, reclining front bucket seats with head restraints and armrests, carpet, cargo tonneau cover, intermittent windshield wipers, rear window wiper and defroster, remote tailgate and fuel filler releases and AM/FM stereo cassette with four speakers and in-glass rear window diversity antenna.

The Axxess is 171.9 inches long, 66.5 inches wide and 64.6 inches high. Front track is 57.5 inches and rear track is 56.3 inches. Wheelbase is 102.8 inches for the fwd model and 102.4 for the all-wheel-drive version.

The fwd model weighs 2,877 pounds, while the all-wheel-drive model weighs in at 3,146 pounds.

TWO-SEATERS

FROM PAGE 1

into the water.

"Everybody is rushing to this area of two-seaters and two-plus-twos, which is going to be growing but not to the extent that everybody is going to be a winner," said Thomas O'Grady, Integrated Automotive Resources, Wayne, Pa.

"Everybody realized the segment was growing, they drew up plans to get into it, and some of them don't belong there," he said. "Some don't have the power and clout, the technical expertise or the marketing capability to stay in and fight it out."

Nevertheless, O'Grady noted, two-seaters and 2+2s — particularly those in the $20,000 to $30,000 range — can accommodate the needs of only a limited number of buyers.

Last week, Buick announced it will reduce production of its two-seat Reatta. The move will result in the layoff of 100 workers, and reduce production from 56 to 42 cars a day starting Feb. 13. Some layoffs will occur Jan. 20 when the plant is shut down for installation of a new paint process and some new tooling for the Reatta convertible, which will be introduced in the fall.

Buick officials said their sales forecasts may have been overly optimistic in light of the fact that the convertible won't be ready until fall, about a year after it was originally intended. Buick's research of potential buyers seeking an expressive car like the Reatta shows that they often want a convertible. Buick expects at least a third of Reatta sales to be convertibles.

Despite the production cut, Buick is still shooting for 7,000 to 8,000 sales in the 1989 model year. Buick could approach its goal if it sustains the sales rate of the first quarter of the model year, in which 1,755 Reattas were sold.

In addition, Buick is boosting Reatta advertising to launch levels, said Jay Qualman, Buick general director of advertising. Buick backed off its launch level of advertising — estimated at $10 million annually — when the car became an instant success by surpassing sales expectation in the 1988 model year.

Meanwhile, Cadillac continues to struggle to sell its Allante. Sales in calendar 1988 were up 22 percent over 1987 sales. However, December Allante sales were off 55 percent from the previous year, and if that trend continues, Cadillac won't make its 1989 model year target of 3,200. Cadillac closed the year with 262 days' supply of the $50,000-plus, ultra-luxury model.

Nevertheless, Cadillac plans no change in production schedules, though a year ago, when inventories climbed, Cadillac did halt production for nearly two months.

Because of increased prices resulting from the weak dollar, European and Japanese manufacturers offering expensive two-seaters and sport coupes also are finding them a tough sell. Virtually all of those importers saw sales of their entries in the segment dive during 1988, and December was a particularly poor month for many.

Porsche sales dropped 33 percent in 1988 from the year before. Sales of the Mercedes-Benz 560-SL held steady in 1988 from 1987, though they took a 27 percent drop in December compared with December 1987. Likewise, sales of two-seaters and 2+2s from Toyota, Nissan and Mazda were off substantially in 1988 compared with 1987.

Against that backdrop, Chrysler last week introduced its $30,000 luxury sports convertible, the TC by Maserati, after several false starts. Chrysler's goal is to sell 3,500 for the model year and to sell 4,000 to 5,000 in the next model year.

Meanwhile, in preparation for next spring's introduction of its supercharged Corrado sport coupe, VW is showing the car at this winter's major U.S. auto shows.

Japanese makers request tax break for bigger minicars

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japan's minicar makers want to think big and are petitioning the government to allow them to build larger and more powerful minis without having to pay higher taxes.

The Japan Automobile Manufacturers Association is petitioning the Ministry of Transport to extend the limit on engine size from the current maximum of 550 cubic centimeters to between 650 cc and 690 cc. They also are seeking an increase in overall length from 126 inches to between 128 and 130 inches, and width from 55 inches to 57 inches.

Honda President Tadashi Kume said the petition simply reflects current demand in the minicar market where consumers are showing an increasing interest in options such as air conditioning and automatic transmission. Kume said the proposal for larger dimensions is reasonable.

However, the petition comes at a time when the companies that specialize in minicars are facing what they fear might be a sharp downturn in their segment after Japan's tax reform bill takes affect in April.

At that time, the staggered luxury tax system that has largely favored small cars will be replaced with a flat commodity tax. The change is expected to benefit larger cars, particularly those over 2 liters, which have been restricted under the current tax system.

In addition, the annual auto tax also will be lowered, particularly on engine sizes between 2 liters and 3.5 liters. Those engines had been taxed at much higher rates than smaller engines under the current system. BMW, which has led the way in arguing for a change in the tax rates on larger cars, expects the new rates to have a strong impact on sales.

While changes in the tax laws are expected to promote the sale of large cars, it only underscores an overall trend to larger cars in the Japanese market. Last year, sales of cars displacing more than 550 cc rose 14 percent, but minis grew only 4 percent.

Analyst Stephen Usher, Kleinwort Benson, does not see much of a future in the minimarket, even with an increase in dimensions. He said the 1-liter market has become a much more attractive alternative.

Even Honda, which insists there is still a market for the mini in Japan, is not forecasting any upward trend. "Sales may not increase," Kume said. But he said there would be no serious cutback.

Many companies are forecasting 2 percent to 3 percent growth for the domestic market in 1989, based largely on the boost expected from the tax reform. Although some companies are outlining much higher individual goals.

Usher calls the 2 percent to 3 percent forecast conservative. He looks for growth of at least 4 percent to 5 percent, and perhaps much higher. The companies that will benefit the most will be those already in the luxury and large-car segments, he said.

Analyst Koji Endo, Nomura Securities, said there may be 2 percent to 3 percent growth for calendar year 1989. But for the fiscal year, beginning in April when the tax reform takes affect, he said the increase could hit double digits.

Some pent-up demand might also be anticipated following the funeral for Emperor Hirohito. Ever since September, when the emperor became seriously ill, companies have exercised some restraint, reducing advertising and postponing sales campaigns.

Now dealerships are anticipating moves to cut prices, to boost sales — particularly in March — when a turndown is expected just prior to the tax change. BMW is the only company to publicly announce price cuts because of the shift in sales that the tax reform is supposed to induce.

Japanese makers are reluctant to follow suit. Some dealers have been advised not to be the first. But any move to reduce prices is expected to spread quickly.

EUROPE

FROM PAGE 2

creased gains in other markets.

Fiat's run at first place was helped by Alfa Romeo. Alfa sales rose 14.9 percent to 214,800. Its new 164 sedan is a hit in Italy and was introduced in other European markets in the second half of 1988. Fiat brand climbed 9.7 percent to 1,445,300. Lancia/Ferrari sales were 268,300, up 4.2 percent in 1988.

Some observers believe Fiat is in position to take over first place in 1989. The Italian company introduced its Golf-fighter, the Tipo subcompact, in 1988 and is expected to boost Tipo output closer to capacity limits in 1989 and market the new car aggressively.

Peugeot S.A., including Peugeot and Citroen, improved the most among Europe's six big-volume producers in 1988. Sales rose 11.2 percent for the year to 1,672,100 with the aid of a healthy French market. Peugeot S.A. boosted market share from 12.1 percent in 1987 to 12.9 percent last year, the biggest gain of any manufacturer.

The main reason for the performance is the success of Automobiles Peugeot's 405 compact, introduced in mid-1987. Only capacity limits seemed to restrain the 405 as Peugeot-brand sales rose 14.2 percent. It was the biggest leap of any single marque other than BMW's new-5-series-led 19.9 percent leap to 355,300 units. BMW's share rose to 2.7 percent share from 2.4 percent in 1987.

Ford built to capacity all year — except for its Scorpio big car — but couldn't make up sales lost during a lengthy strike in the United Kingdom last February. Volume declined 1.2 percent to 1,465,700 units and, with the European market booming, share tumbled from 12 percent to 11.3.

General Motors gained 3.7 percent for the year to 1,375,300 units, good for a 10.6 percent share. GM gained in the second half after a third shift was added in April at its plant in Zaragoza, Spain, putting more Opel Corsa/Vauxhall Nova small cars into dealers' hands.

GM also was helped by the new Vectra/Cavalier compact launched last fall. GM December sales rose 10 percent to 100,300 units.

Renault was sixth in 1988 with a market share of 10.2 percent on sales of 1,325,500, a gain of only 0.3 percent. Despite introducing its new R-19 replacement for the slow-selling R-9/11 twins, Renault was flat in a French market that was up more than 5 percent.

The Japanese, who are in the midst of sensitive discussions with European officials over import levels in the pre- and post-1992 market unification eras, took pains not to be disruptive in 1988. Japanese makers finished with combined sales of 1,445,700 cars, an 11.1 percent market share — down from 11.3 — and a volume gain of 3 percent. December sales dropped 16.1 percent to 83,400.

Nissan once again was tops in Europe among the Japanese, with sales of 378,000 cars.

West Germany nearly equaled its record 2.91 million sales in 1987. Europe's biggest market finished at 2,803,500 in 1988, a decline of 3.8 percent. German sales were off 11 percent last month to 220,000 units.

The French market recorded a strong December to move into second place ahead of the United Kingdom and Italy with sales of 2,217,800, a gain of 5.3 percent. December sales were up 23.5 percent to 258,000.

Sales in the United Kingdom grew 10 percent in 1988 to 2,215,600 units. However that market is widely expected to flatten out this year. December volume was up only 0.4 percent to 91,600.

Italy cracked the 2-million barrier for the first time, finishing at 2,184,000, an increase of 10.5 percent. Spain topped one million for the first time, rising 14.4 percent to 1,058,600, the third straight year of dramatic growth.

Economic woes in Denmark and Norway caused those markets to suffer in 1988. Norway was down 41.2 percent to 67,700 car sales, and Denmark dropped 28.8 percent to 87,800.

The biggest growth was registered in Portugal, which is sharing the economic robustness of its Iberian neighbor, Spain. Portuguese sales rose 66.4 percent to 206,000 units last year.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	Jan-Dec. 1988	Pct. Change from 1987
West Germany	2,803,500	− 3.8

TARIFF

FROM PAGE 1

ernment decision catching the import industry more off-guard. He said:

"This has sent shock waves through the industry, and I think its impact will be felt way beyond Customs. I don't think you can overturn years and years of trade policy without a decision being made at the highest reaches of government and that's where this will end up."

The decision to suspend the controversial ruling came after a meeting last Thursday between Brady and West German Finance Minister Gerhard Stoltenberg. Although Brady and Stoltenberg met to discuss a range of economic issues, Stoltenberg brought up the tariff matter out of concern for Volkswagen AG's sale of Vanagon models in the United States, sources said. The Vanagon is one of 21 imported van and sport-utility vehicles affected by the ruling.

Earlier in the week, the National Automobile Dealers Association, the American International Automobile Dealers Association and Automobile Importers of America had asked the Treasury Department to suspend the Customs ruling.

Most affected importers are taking a cautious approach, typically holding off pricing decisions until they get a definitive answer from the U.S. Treasury on how the duty applies to them, but the prospects include squeezed dealer and importer margins and higher sticker prices.

Many echoed Toyota Motor Sales' prepared statement:

"It's too early to assess whether or not prices will be increased. At this point, the exact number of vehicles that will be affected hasn't been determined. Naturally, we're disappointed with Customs' announcement but will abide with the new ruling."

But at least two companies acknowledged that ultimately, if the ruling stands, there will be an impact on prices.

"The Trooper II is our most profitable and best-selling model," said Jack Reilly, senior vice president and general manager of American Isuzu Motors. "If the ruling stands, we'll have to look at handling it three ways — swallowing some of the price increase, raising the manufacturer's suggested retail price and squeezing dealer margins."

Reilly's comments echoed those of Jules Clavadetscher, director of product development for Nissan Motor Corp. in U.S.A.:

"I'm not saying we would reduce dealer margins on the Pathfinder and van, but we would have to take a look at it. It's still too early to tell what our response will be."

Perhaps the hardest hit by the ruling is Range Rover which, at $35,800, is the highest-priced vehicle affected by the ruling.

Company officials acknowledged that the duty could be in the $5,000 to $6,000 range, although they have not calculated it exactly, pending clarification.

"We don't think this will affect our customers too much," said a spokesman, who noted that the typical Range Rover buyer has a household income in the $150,000 to $200,000 bracket.

Others were confused as to whether it applied to them.

Laforza Automobiles, the Hayward, Calif., importer that will begin marketing a $43,800 sport-utility vehicle in March that will compete against Range Rover, so far has no idea how much duty will be levied on its vehicle.

"We're going to seek an immediate clarification from Customs," said Robert Stallsmith, Laforza president. "So far, there is no indication that any of it applies to us, but we simply have to know."

Laforza's chassis and bodywork is assembled in Turin, Italy, by Pininfarina, but final assembly has begun at C&C Inc. in Brighton, Mich., where a U.S.-built Ford 5-liter V-8, transmission and transfer case and some accessories are added.

Laforza is hastily documenting the exact amount of U.S.-sourced parts and labor to accompany its request to the U.S. government. Even if the 25 percent duty applies only to the Italian parts and labor, it would amount to several thousand dollars per unit, Stallsmith acknowledged.

In Europe, Volkswagen AG said it "will not accept" the U.S. Commerce Department's decision to slap a 25 percent tariff on the company's Vanagon model and is preparing a court challenge.

However, if the ruling stands, one option is not to sell the upcoming replacement for the Vanagon in the United States, according to Rolf Hartermann, VW sales director for commercial vehicles.

Last year, VW sold 5,416 Vanagons in the United States. The peak was 18,000 in 1985.

"We are not willing to accept this decision because we don't think we fall under this act," Hartermann said.

His argument mirrors that of other importers caught up in the decision — in that their multipurpose vehicles are used primarily to transport people, not cargo. Yet, those vehicles are generally certified to light-truck safety and fuel-economy standards and are exempt from passenger-car passive-restraint rules.

"We are a bit astonished, for instance, that the Range Rover or the Mazda MPV are included in the list of vehicles affected by that extra tax," Hartermann said.

Hartermann said tariff charges are being deposited in a special account.

Hartermann said VW does not plan joint legal action with other manufacturers.

If the new Customs standard is not changed, Hartermann said he could not rule out a decision not to export the next-generation van to the United States. The front-wheel-drive Type 2 replacement is expected early next year, according to VW sources at the Brussels Truck Show.

Meanwhile, VW hasn't decided whether to raise prices on its Vanagon.

McElwaine, president of the American International Automobile Dealers Association, said importers and dealers asked for the delay in the ruling last week. "This was a body-blow to the import automobile industry. It increases costs for multipurpose vehicles from a low of $2,500 per vehicle to a high of $5,000," McElwaine estimated.

"We are doing everything we can do to see that this does not take effect," he said. The suspension of the Customs Service order was necessary, he said, so "we can present rational arguments against this ruling and we would like the Customs Service to hold public hearings."

"We don't think the Customs Service has the right to make a major trade policy decision without advance notice or public hearings," he added.

McElwaine said the association has not urged dealers to aid in overturning the decision, although some dealers have reportedly written members of Congress complaining of the high tariff. McElwaine said dealers may be asked to voice their concerns once a decision is made on postponement.

NADA Executive Vice President Frank McCarthy said, "We can't believe the Customs Service realizes the full impact of this ruling." He said NADA "will do everything in its power to see that this decision is overturned."

Automotive News Staff Reporters Jesse Snyder and Francis J. Gawronski in Los Angeles and Richard Johnson in Frankfurt, West Germany, contributed to this report.

QUOTAS

FROM PAGE 1

restraints are meaningless and should be dropped because the effects of the exchange rate as well as the growth of transplant operations have made the 2.3 million limit on car exports difficult to achieve.

Shipments of 1,479,604 units between April and November 1988 were down 10.4 percent from the same period a year earlier. Most of that decline is attributed to companies delaying shipments to clear out inventories of old models in order to bring in higher numbers of new models introduced in the fall.

MITI Minister Hiroshi Mitsuzuka said the restraints will be kept in place until it is certain that lower export figures will be maintained.

Analyst Koji Endo of Nomura Securities said some increase in exports is expected, if only to counter an expected turndown in Japanese domestic market sales as buyers await the lower tax rates on cars that are slated to go into effect in April.

Honda Motor Co. is forecasting a 6 percent increase in overall exports, including a 4 percent increase to the United States for the 1989 calendar year. Honda said it will be able to increase shipments between the first of the year and the end of the quota year in March as the result of a decrease in shipments during the last half of 1988.

Shoichiro Toyoda, president of Toyota Motor Corp., which could also benefit from an increase in exports, said the decision to extend the quotas could not be helped, since it was made in consideration of U.S.-Japan trade relations.

Most auto leaders, commenting on MITI's decision, said it was necessary to avoid further friction on the trade issue. The most negative comment came from Suzuki Motor Co. which, like other companies that are left with a small allotment under the current arrangement, has more to lose by the extension. Suzuki President Osamu Suzuki said the restraints support a gap between Japanese automakers in the U.S. market.

Mitsuzaka held out the option of canceling quotas in mid-year if a strong downward trend in exports is determined. But most analysts, who see MITI passing up what might be the best opportunity for eliminating restraints, do not really expect a reversal so soon.

The decision is viewed widely as a comment on the total trade issue. The announcement of the extension followed a government forecast for strong economic growth in 1989 that includes only a slight cutback in exports.

Reaction in the United States was varied.

Robert M. McElwaine, president of the American International Automobile Dealers Association, said, "Our association had just sent a letter to MITI asking that the quotas be terminated. In our view, there is absolutely no justification for their continuation.

"Japanese manufacturers will fail to reach the existing quotas for the second year in a row in 1989. The voluntary export restraints serve no other function than to distort the new-car marketplace at a time when domestic manufacturers are having their most profitable year in history."

"Even with all the talk about the Japanese taking it off, it's really not unexpected," said Jimmy Payton, president of the National Automobile Dealers Association. "I thought they would do it. With all of the automobiles that are being built here today, it is meaningless anyway. I'm not sure that they are going to use all the 2.3 million they have for 1988."

UAW President Owen Bieber said, "We are pleased that Japan responded to the concerns raised by UAW and others in agreeing to renew the (restraints) for another year. At the same time, we are disappointed that they did not respond to our proposal to adjust the (total) downward so as to make allowance for the growth of low-U.S.-content 'transplant' assemblies."

A spokesman for Ford Motor Co. in Washington said, "We're pleased the Japanese government has recognized that some form of restraint is necessary until the serious imbalance in U.S.-Japan trade is corrected.

"The present agreements between the United States and Japan on automobiles, semiconductors, textiles, steel and other products should remain in place until Japan's trade surplus has declined substantially. In addition, Japan must further open its markets to U.S. goods and continue to stimulate its domestic market."

Rep. John Dingell, R-Mich., chairman of the House Energy and Commerce Committee, said that while the decision is good news, he feels the quota number is fixed so high it doesn't have much meaning.

"There is sufficient cheating so that the actual figure isn't all that important," he said "Japanese manufacturers have done everything they can to get around it. They'll call cars anything from trucks to wagons, to perambulators, if it will help them beat the system."

A spokesman for Chrysler Corp. said the company welcomed the continuation of restraints, adding they should "stay in place until there is a major reduction in the automotive trade imbalance."

General Motors called the extension "mostly symbolic. The voluntary export restraints are not constraining shipments from Japan and are not expected to, under current market circumstances. The consensus among auto analysts is that auto imports from Japan will fall considerably short of the 2.3 million limit in 1989."

Saturn seeks 1,000 line workers

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Saturn Corp. will hire 1,000 people for its Spring Hill, Tenn., auto plant this year, bringing its total workforce to 1,500.

In comments addressed to the Maury County (Tennessee) Chamber of Commerce last week, Saturn President Richard G. "Skip" LeFauve indicated for the first time that annual production costs for the new Saturn car will be approximately $1.8 billion a year at full production.

The new-employee hiring campaign will shift its focus from workers with powertrain and foundry backgrounds to those with general assembly backgrounds.

Recruitment coordinator Bob Pearson said the hiring process will accelerate now because the pool of applicants with assembly backgrounds is larger.

Pearson said the company already has 9,000 applications on file, and is confident of filling the next 1,000 openings exclusively from GM rank and file.

INVENTORIES

Stronger sales reduce days' supply of cars

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Following strong year-end car sales, 1989 opened with the combined days' supply of domestic and imported cars slightly below the figures for Dec. 1 and Jan. 1, 1988.

Continued incentives and an 11.70 percent December sales gain kept domestic-car inventories at normal levels for this time of year.

Import-car stocks crept up in December, although the average days' supply remained stable. Makes with stocks equal to a supply of 130-200 days included Isuzu, Audi, Volkswagen, Sterling, Yugo and all Big 3 captives except General Motors' Pontiac LeMans.

Dealers queried by Automotive News had varied opinions of their stock levels. "We have adequate inventories. We probably have a 50-day supply and should have 75-days' worth in a couple of weeks," said Tony Cueva, general sales manager of Fairfax (Va.) Chrysler-Plymouth.

"At this time, they are off balance. We are high in low-end autos — Festivas and Escorts. We have a no-day supply of Thunderbird Super Coupes and we have three Taurus SHO models," said James Hoffer, general manager of Jordan's Automall (Ford-Toyota-Volvo), Mishawaka, Ind.

On Jan. 1, combined stocks of U.S.-built and imported cars were 2,250,831, equal to a 67-day supply. That was 12,126 units higher than a month earlier when there were 2,238,705 unsold domestic and import cars, equal to a 71-day supply.

Combined car stocks, however, were 4.62 percent or 109,075 units slimmer than last Jan. 1, when there were 2,359,906 cars, representing a 73-day supply.

The Jan. 1 stockpile of U.S.-built cars totaled 1,585,922 units, representing a lean 67-day supply. That compares with 1,611,631 last month, equal to a 73-day supply.

Domestic-car stocks were 5.75 percent below a year ago on Jan. 1 when there were 1,682,600 cars, representing an inflated 79-day supply because of lower December deliveries in 1987.

Import-car stocks totaled 664,909, representing a 66-day supply on Jan. 1. A month earlier, there were 627,074 unsold imported cars on hand, also equal to 66 days.

Last year on Jan. 1, there were 677,306 imported cars in stock, representing a slimmer 61-day supply because of stronger sales.

Among the seven U.S. carmakers, General Motors, Honda and Mazda reduced their combined domestic and import-car inventories from Dec. 1.

GM's car stocks, including captives, totaled 894,303, equal to a 75-day supply. That was down 3.61 percent from 927,814 on Dec. 1, which equaled 83 days' worth of selling. A year ago, GM's inventories were an inflated 1,002,457, equal to a 94-day supply.

Although Ford reported slightly heftier combined car inventories of 514,500 units on Jan. 1, the total represented a slimmer 70-day supply than last month when there were 512,550 cars on hand representing a 79-day supply. On Jan. 1, 1988, Ford's inventory was 439,621, a 70-day supply.

Chrysler Motors' better sales pace in December could not reduce its stocks on Jan. 1. Including captives, Chrysler had 299,403 unsold cars in stock, equal to 85 days' worth. A month earlier, the total was 277,475, representing 81 days' worth. The latest inventory figure was significantly lower than a worrisome 351,774-car total, or 101 days' worth, on Jan. 1, 1988.

Honda whittled down its U.S.-produced and import car stocks from last month. On Jan. 1, Honda's lean import and U.S.-built stocks totaled 32,674, equal to a slim 13-day supply. A month earlier, Honda reported 34,846 unsold cars, representing 16 days' worth. A year ago, Honda had 30,755 cars, an 11-day supply.

Toyota and Mazda reduced their import-car stocks but had more unsold U.S.-built cars on Jan. 1. than a month earlier.

On Jan. 1, Toyota's combined car stocks were 52,128, equal to 20 days' worth. A month ago it had 48,794, a 19-day supply.

Mazda, on the other hand, reduced its combined car stocks to 44,431 cars, equal to a 57-day supply, down from 47,384, or 54 days, on Dec. 1.

Nissan had more unsold cars on Jan. 1 than on Dec. 1. Domestic and import-car stocks totaled 119,619 on Jan. 1, equal to an 80-day supply. On Dec. 1, Nissan had 115,481 unsold cars, representing a 71-day supply. Last January, however, Nissan began the year with an even fatter 115-day supply.

The import car and truck stockpile on Jan. 1 grew to 821,907, up from 787,528 a month ago, but the days' supply remained at 67.

At the beginning of last year, the import-vehicle stockpile total of 675,372 was 21.70 percent leaner.

Import-truck stocks edged up to 156,998 on Jan. 1, equal to a 68-day supply, vs. 156,454 on Dec. 1, a 67-day supply.

Car output 33% above 1988 week

By K[illegible]ny Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. carmakers scheduled production of 154,455 cars during the second week of the new year.

It was 38.14 percent more than the prior week's 111,810 and 33.59 percent above the year-ago week's 115,618.

Production during the year-ago week output was weakened by downtime at several plants for inventory adjustment.

So far this year, 266,265 cars have been assembled, 22.91 percent more than the 216,636 completed last year at this point.

Last week's estimated production was shared as follows: General Motors, 48.00 percent; Ford Motor Co., 27.11 percent; Chrysler Motors, 12.82 percent; Honda of America Manufacturing, 4.89 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.12 percent; New United Motor Manufacturing Inc., 1.94 percent; Nissan Motor Manufacturing Co. U.S.A., 1.78 percent; and Diamond-Star Motors, 0.34 percent.

Truck output was scheduled at a hardy 92,329 last week, 34.56 percent more than the previous week's 68,618 and 12.11 percent more than the year-ago week's 82,359.

Year-to-date, 160,947 trucks have been built, slightly less (0.08 percent) than the 161,074 units built last year at this point.

A fire broke out at a GM parts plant in Flint, Mich., last Monday. The fire halted output last Wednesday at the company's Willow Run, Mich., plant, which builds the Pontiac Bonneville and Olds 88. It also stopped production last Wednesday and Thursday at the Wentzville, Mo., car facility, which builds the Buick Electra, Olds 88 and Olds 98. The fire also affected output at GM's Fort Wayne, Ind., and Pontiac, Mich., truck plants last Wednesday.

GM will cut output of its two-seat Buick Reatta next month due to slow sales and to prepare the Lansing, Mich., plant for output of the Reatta convertible model, scheduled to be introduced later this year.

Chrysler added a second shift at its Brampton, Ontario, plant last week. About 400 workers were added to increase output of the Jeep Wrangler by 132 units daily.

Trucks exceed cars in Canada

Last week, Canadian truckmakers were scheduled to build more units than the automakers.

Scheduled production of 20,685 trucks was 25.91 percent more than the previous week's 16,428 and 13.77 percent more than the year-ago week's 18,181.

Year-to-date, 37,113 trucks have been built, 6.44 percent above the 34,869 completed last year at this point.

Auto output was estimated at 18,744, 48.89 percent more than the previous week's 12,589 but 17.54 percent below the year-ago week's 22,732.

So far this year, 31,333 cars have been assembled, 32.06 percent fewer than the 46,120 built at the same time last year.

New transaxle redesigned by Chrysler

Clutch failure tied to seal rings

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER
Copyright 1989, Automotive News

HIGHLAND PARK, Mich. — Chrysler Motors has had to replace its new four-speed electronic transaxle in an estimated 5,000 vehicles, representing three percent of retail deliveries of the vehicles equipped with the transaxle, and is completing tests to correct a design defect in the highly touted transmission.

Affected vehicles are those ordered with a V-6 engine and equipped with the A604 four-speed transaxle as standard or optional. The vehicles include Plymouth Grand Voyager, Dodge Grand Caravan, Plymouth Voyager LE, Dodge Caravan LE, Chrysler New Yorker and Dodge Dynasty.

A design defect in the transaxle that was introduced on 1989 models has caused internal fluid leakage leading to clutch failure. Chrysler said the failures "appear to be more frequent with lower mileage vehicles — less than 5,000 miles."

Chrysler said an estimated 150,000 A604 units have been retailed since production began in midsummer at the company's transmission plant in Kokomo, Ind.

A production change in the logic of the transmission's electronic controller was completed in December. That change instructs the transaxle to avoid the clutch drag condition associated with the fluid leakage by maintaining third gear until the transmission is able to complete the shift to fourth gear.

In addition, Chrysler is currently testing a design change in the transmission's seal rings to prevent the fluid leakage.

"A design change in the seal rings to prevent fluid leakage already has been completed and testing is underway," a Chrysler spokesman said. "Testing will be completed in a matter of weeks and the production fix should be implemented a couple of weeks thereafter."

Chrysler has delayed the launch of the Plymouth Acclaim LX sedan until the design change has been implemented. The Acclaim LX carries the A604 as standard equipment and is a top-of-the-line model in Chrysler's new line of A-body family sedans launched this year.

Although national advertising for the LX has already broken, Chrysler said last week that the launch — which was initially scheduled in January — is now expected in March.

In addition, the companion Dodge Spirit ES, which went into production last week, cannot be

Grettenberger: Proposed LSS model could do battle with the Lexus and Infiniti

Cadillac watches Japanese

Will offer import fighters if Lexus, Infiniti score

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Cadillac is prepared to introduce one or two models aimed directly at the Japanese luxury makes if those new lines prove successful.

Cadillac General Manager John Grettenberger said if a marked shift of customers to Toyota's Lexus and Nissan's Infiniti occurs, the General Motors' flagship division could launch a model or two that would compete head-on with the luxury imports that debut next fall.

"If they draw people who are currently willing to pay $27,000 to $28,000 for what they consider to be a car that meets their needs and if they get them to move that dramatically, we'd be crazy not to come out there, as we certainly could, with a couple of competing entries of our own," Grettenberger said.

He added that the corporation has not blessed such a strategy for Cadillac but, in the meantime, the division is laying the groundwork.

The Cadillac import fighters, Grettenberger said, would be models "with an entirely different appeal to a different type of luxury car buyer."

He said: "There are people we're not reaching today as sufficiently as I would like. I believe the luxury car imports from Japan as well as Europe have a place in the market, and there are a lot of people who have been going to those cars because the domestic makes — Lincoln and Cadillac — just don't offer them what they really want. So we're looking very seriously at a program that would bring us a new type of Cadillac."

Grettenberger said the proposed LSS model could do battle with the Lexus and Infiniti. The LSS, short for Luxury Sport Sedan, is likely to be powered by the GM-Lotus-developed North Star engine. The engine is a 32-valve V-8 with a double-overhead cam on each cylinder bank. Both Lexus and Infiniti will be fitting their large sedans with such high-powered V-8s. Spy photographs have shown the aerodynamic design of the LSS differs significantly from Cadillacs now being built.

Still categorized as a project, the LSS has not received official corporate approval to go into production, Grettenberger said. However, GM sources say approval is expected within six months. The earliest it could be brought to market is 1992.

"I love it. It's a great project," Grettenberger said. "And the business case is getting better and better as we go along. It will definitely be a different type of Cadillac, if it comes to pass, than we've ever seen before. It will appeal to a different segment of the market and will broaden our base, giving us some opportunity to reach those people who are going to expensive luxury imports."

In addition, Grettenberger said Cadillac is considering adding a model that would go head-to-head with the BMW 735.

"We do not offer right now a car that can

Bricklin plan: ownership of 1,000 deals

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Malcolm Bricklin this week will till his favorite fertile ground — the National Automobile Dealers Association convention — this time with a plan to create the first national dealership chain comprised of 1,000 points.

The master deal maker, who brought Subaru and Yugo to America, has apparently won the confidence of Wall Street for his $2 billion undertaking.

The linchpin for the chain of dealerships is a "closing booth" — a mystical room that combines a pinch of hocus-pocus with a splash of Disneyesque imagineering to create an atmosphere where customers will have oodles of fun then spend $14,000 or thereabout on a new car.

Bricklin Motors, a Delaware corporation with headquarters either in Denver or New York (the site has yet to be determined), will acquire 80-percent positions in 10 megadealerships in various metropolitan markets by year-end, Malcolm Bricklin said in a telephone interview.

Under Bricklin's scenario, each dealer will retain a 20-percent stake in his dealership and purchase 2 to 4 percent of Bricklin Motors with a small portion of the dealer's proceeds from the sale of his dealership to the Bricklin holding company.

According to Bricklin's financial people, the initial 10 dealers will convene at a round table — a sort of automotive Camelot — with equal responsibility for managing Bricklin Motors and acquiring dealerships in their zones until there are 1,000 by Year 3.

But Malcolm Bricklin, who is chairman of Bricklin Motors and who will retain controlling interest of the company, pledges without a trace of humility to own the 1,000 dealerships by the end of 1989.

He said that although Bricklin Motors will acquire only profitable dealerships brought to it by the round-table dealers, individual round-table members can purchase failing dealerships on their own, turn them around then sell them to the holding company.

Charles A. Ramos, president of New York-based investment banking firm Printon Kane Capital Corp., is financial advisor for Bricklin Motors. He said banks will provide bridge financing for the first few acquisitions. High-yield or junk bonds will be sold to pay off the debt. The banks will then continue the line of credit.

The holding company would float junk bonds when it accumulated a number of dealerships so the aggregate size is sufficient to go into the junk bond market.

No registration statements have yet been filed with

Nissan's Pathfinder might be built in Smyrna, Tenn.

Nissan may produce Pathfinder in U.S. if 25% tariff is upheld

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. will consider building its Pathfinder sport-utility vehicle in the United States if a U.S. Customs decision to levy a 25 percent duty on multipurpose vehicles is upheld.

Nissan President Yutaka Kume, in answer to questions on alternatives to the tariff, said local production at the company's Tennessee assembly plant was a possibility.

Last year, Nissan sold 29,614 Pathfinders as cars in the United States. If the recent Customs determination is allowed to stand, multipurpose vehicles like the Pathfinder, which are certified to truck safety and emission standards, would be affected by a 25 percent duty on imported trucks.

Perkins in line for Chevy chief

By Michelle Krebs and Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors announced Friday that the chief of Toyota's newly created luxury division would join Chevrolet as the heir apparent for the division's top job.

J.C. "Jim" Perkins, who most recently was senior vice president of Lexus Division, was named to the newly-created position of assistant general manager. The move positions him to succeed Robert D. Burger, who must retire by July when he turns 65.

Perkins, who resigned Friday from Toyota, reports directly to Burger. His new job is effective immediately.

While it is true that Perkins enjoyed a 24-year career at GM, the fact he is coming from a four-year stint at Toyota Motor Sales U.S.A. brands him as an outsider and sends a clear message that it is not business as usual in terms of the lines of succession at GM.

It also shows Chevrolet means business in battling the imports by hiring on a senior member of Japan's General Motors.

Perkins

Burger will leave Chevrolet with GM's top-volume division trailing Ford Division in sales for an unprecedented two years running. Burger said it is unlikely Chevy will surpass Ford in 1989.

Born in Waco, Texas, the 53-year-old Perkins spent his formative years in the central Texas city.

Perkins joined Chevrolet in 1960 and continued with the division for 22 years, including a short stint on the corporate marketing staff as well as two years as Buick's general sales manager.

In 1984, Perkins left Detroit for Toyota. He was named a group vice president of sales, marketing distribution and planning for Toyota.

Perkins was named to head the Lexus division last May reporting directly to Robert McCurry, Toyota's executive vice president, sales and operations.

Financial problems plague maker of Vixen motor home

Vixen looks for help

Motor home maker seeks sale or merger

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Vixen Motor Co. of Pontiac, Mich., is skating on thin financial ice again and is looking for a suitor that will pull it to safety.

The company officially shut down its operations as of today and is devoting all its energies to finding a merger partner or a buyer.

It has been steadily trimming its production and workforce for a month, according to Al Dryer, Vixen president.

In September, Vixen employed nearly 100 people. Its employee count was down to 30 last week and, as of today, it has a skeleton staff of only 13, Dryer said.

Officials said they have talked to several interested parties.

Robert Gillow, Vixen chairman and owner of Action Oldsmobile in Livonia, Mich., characterized the talks as "very serious negotiations."

However, there doesn't appear to be an imminent deal.

Industry sources named Fleetwood, Thor Industries and Coachmen Industries as likely suitors. None has a small motor home in Vixen's size category.

Fleetwood, however, hasn't made an acquisition in a long time. Thor was built from acquisitions. Coachmen has been working on a small motor home for a long time, but apparently without too much success because no one has ever seen it.

Vixen has about 90 days to find a buyer, according to Gillow. After that, it will have to find a new infusion of cash to resume production.

"If someone with expressed interest who was working toward that interest" were found, the deadline could be delayed, Gillow said.

He said the state of Michigan pension fund and the Detroit Police and Firemen's Fund, which own about 71 percent of the company, have been "very supportive in wanting the company to continue."

"They've indicated they would help in any way possible" to ensure Vixen's continued operation, Gillow said.

He added that no matter what deal might be struck, the two investors will lose a substantial portion of their investment.

Vixen is healthier than it was a year ago. Under a reorganization plan last year, it basically converted all outstanding debt, including that of former suppliers, into equity. It currently owes only $2.5 million of new money supplied by the Michigan and Detroit pension funds, Dryer said.

The city of Pontiac also still owns the land and building in which it is operating, worth about $6 million.

Dryer said the company met its sales and financial targets in September, churning out its first profitable month. With the onset of winter, however, its retail sales dried up.

"We've exhausted the majority of our working capital to keep the operation running. We thought that, rather than starting up again, we should focus on a merger and sale," Dryer said.

In its search for a buyer, the company has enlisted the aid of Jim McTevia & Associates of Detroit, a firm specializing in mergers and acquisitions.

Court fight looms on 25% MPV tariff

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A court battle over the classification of multipurpose vehicles seems assured regardless of how the Treasury Department rules on the issue.

Top representatives of domestic manufacturers and import dealers made that clear last week as Treasury announced that a final decision on whether to classify multipurpose vehicles as cars or trucks may not be made for several weeks.

The uproar stems from a U.S. Customs Service ruling that defines multipurpose vehicles (vans and sport-utilities) as light trucks, making them subject to a 25 percent import duty. The Treasury Department has suspended that ruling temporarily.

The domestic industry presented its position in a letter to Treasury Secretary Nicholas Brady. It was signed by General Motors Chairman Roger Smith, Ford Motor Co. Chairman Donald Petersen, Chrysler Corp. Chairman Lee Iacocca and Motor Vehicle Manufacturers Association President Thomas Hanna.

They wrote, "If the U.S. Customs Service ruling is reversed or substantially revised, we believe it will cause substantial harm to the U.S. motor vehicle industry, deprive the U.S. Treasury of several hundred million dollars in anticipated tariff revenues and unleash a long battle in the courts and Congress to restore a clear and consistent rule."

Robert McElwaine, president of the American International Automobile Dealers Association, said the import auto industry would also go to court to fight an unfavorable decision. He hinted that foreign governments may appeal an adverse ruling to the General Agreement on Tariffs and Trade, an international trade panel of which the United States and most other industrial nations are members.

The West German, British and Japanese governments have expressed their dissatisfaction with the ruling to the Bush administration, sources said.

Although a court appeal would put the final outcome of the controversy in doubt for some time, the edge would still go to the domestic automakers because Treasury has thus far required importers to post a bond to cover the 25 percent tariff.

A spokesman for Range Rover of North America said the bond requirement would probably result in a price hike since "we cannot price our vehicles in the expectation that we will not have to pay the duty."

Following meetings with Treasury officials last Monday and Tuesday, both import and domestic manufacturer representatives claimed progress in advancing their cases.

Domestic manufacturers and the UAW asked Treasury to stand by the Jan. 4 Customs Sevice ruling. Import manufacturers, the American International Automobile Dealers Association and the National Automobile Dealers Association asked that the decision be overturned so that classification rests on "the condition of the vehicle as imported."

That would mean that multipurpose vehicles could be classified as either cars or trucks, depending on how they are equipped when they enter the United States.

At least some dealers disagree with the position adopted by NADA, however.

Speaking on behalf of the Chrysler-Plymouth Council of Washington State, Jack H. Childress said last week he had been asked by his members to announce that "NADA does not represent all dealers on this issue."

Childress said the Chrysler dealers of Washington are "100 percent behind Lee Iacocca on the classification of multipurpose vehicles and I would estimate that 50 percent of the dealers in my state support the domestic manufacturers' position."

Robert McCurry, executive vice president of Toyota Motor Sales U.S.A., faulted the Customs decision last week in a prepared statement.

He said, "It was issued without warning, without observing normal customs procedures, during a congressional recess and between two presidential administrations. Government rulings of this sort should not be issued in the dead of night. Fairness and the American way re-

4 Pepe dealerships back on auction block

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

CAMDEN, N.J. — Four of 10 Pepe dealerships are on the auction block again, as two of the buyers in an earlier U.S. Bankruptcy Court auction failed in their bids.

The dealerships, owned by Richard T. Pepe and his wife, Virginia, were initially auctioned last October.

The chain, one of the state's largest dealership groups, filed for Chapter 11 protection from creditors last August, citing $54 million in assets against more than $50 million in liabilities, including about $26.9 million owed to General Motors Acceptance Corp.

The Pepes admitted in documents submitted to the court that the dealership group grew too big too fast in 1987 and 1988. They opened seven dealerships with 18 franchises in only 14 months, at a cost of more than $22 million.

The Pepe dealerships and real estate fetched more than $30 million in less than two hours of bidding, but the bids were subject to the approval of the court and of the respective franchisors.

One of the high bidders — partners Richard Catena and Richard Rediker, withdrew their bid, while the other, Bergen County dealer William Perretti Sr. was rejected.

As a result, the four dealerships are back on the auction block with a second auction scheduled for Feb. 3.

The dealerships up for sale are Pepe Lincoln-Mercury-Sterling-Merkur in Millville, N.J.; Pepe Toyota, which is on the same property as the Lincoln-Mercury outlet; Pepe Oldsmobile-Pontiac-GMC Truck in Millville; and Pepe Nissan-Yugo in Vineland, N.J.

Perretti had been the high bidder for Pepe Toyota and Pepe Lincoln-Mercury, with a bid of $10 million; and for Pepe Nissan-Yugo, for $1.7 million. He had also bid unsuccessfully for Pepe Oldsmobile-Pontiac-GMC Truck.

However, attorneys for both sides said Nissan, Toyota and Lincoln-Mercury turned down Perretti's bids, reportedly because of a civil complaint that state Attorney General W. Cary Edwards filed against Perretti alleging consumer fraud.

That suit, according to the attorney general's office, seeks to revoke Perretti's license to do business, claiming that used cars at two of his dealerships, Paramus Chrysler-Plymouth and Wild Bill's Paramus Dodge, lacked required documentation and that salesmen allegedly misrepresented used cars as "executive cars" driven only by Chrysler executives.

The attorney general's office said that Perretti has also signed several consent agreements with the state concerning advertising practices.

Catena and Rediker, who have Chevrolet, Honda and Acura franchises in New Jersey, were the high bidders for the Olds-Pontiac-GMC Truck dealership, at $1.9 million.

However, that bid was withdrawn. Catena confirmed the withdrawal, but would not elaborate.

One of the bidders in the first auction, Sam DiFeo Jr., said last week he would consider bidding on the dealerships at the upcoming auction.

The DiFeo Automotive Group has some 25 franchises, including Mitsubishi, Hyundai, Isuzu, Oldsmobile, Pontiac, Ford, Buick, Subaru, Toyota, Mazda, Sterling and Volkswagen in Jersey City.

LEGAL BRIEFS

New York governor signs car renter's bill of rights

ALBANY, N.Y. — Gov. Mario Cuomo has signed into law what amounts to a car renter's bill of rights. It prohibits the sale of collision-damage waivers by car rental companies doing business in New York state.

The Fair Practices Act for Car Renters limits a renter's liability for most damage to no more than $100.

"The bill's detailed consumer protections and its mandatory insurance coverage make this legislation unlike any other law of its type in the country," said Cuomo.

The new law takes effect April 1.

The legislation is a result of public hearings and a growing number of consumer complaints about the car rental industry, particularly collision-damage waivers.

"In reality, the collision-damage waiver has become little more than a form of bait and switch advertising," said state Attorney General Robert Abrams.

"Consumers are initially told of a low car rental rate, but when they appear at the counter to rent a car, the agent tells them that to avoid potential liability for damage to the car — which can exceed $10,000 — they can purchase, at additional cost, a waiver of this liability," he said.

Abrams said the cost for the insurance-liability waiver has grown to about $10 per day, which generates high profits for the car rental companies. The state insurance department said the real cost of the insurance for the rental car companies can be less than $1 a day.

In recommending that Cuomo sign the bill, Abrams had said its provisions "are important consumer protections in an industry that has presented significant problems all across the country."

Cuomo said, "The question of whether to purchase a collision-damage waiver is very confusing to many consumers, especially in the high-pressure atmosphere of a car rental counter."

Among other things, the bill also makes it illegal for a car rental company in New York to advertise a rental rate that does not include mandatory charges, such as fuel costs and airport access fees.

The rental companies also are prohibited from putting a hold on a customer's credit card for anything more than the actual cost of the rental.

Companies that ignore the law will be subject to fines of at least $500, but not more than $1,000, for each violation.

While the new law will limit a renter's liability for car damage to $100 in most cases, that is not the case when the damage results from irresponsible behavior.

Such behavior includes drunken driving, using the car in "any organized speed racing competition," or having an accident with the vehicle during the commission of a felony.

Florida says all fees should be listed in ads

TAMPA, Fla. — In an opinion issued in response to complaints from car buyers, the Florida attorney general said dealers' fees for handling paperwork should be included in the advertised price of a car.

Handling fees run as high as $300 at some dealerships, said Roger Whitley, president of the Tampa New Automobile Dealers Association. He said the fees are charged for typing invoices, changing the title and billing the customer.

"We do not include that in the price. I don't think any dealers around town do," Whitley said. "If you look at the bottom of ads, it says, 'Sales tax, licenses, handling charges additional.' "

Attorney General Bob Butterworth, however, said the costs must be included in the advertised price of the car or truck. He said an advertisement includes stickers on the window and prices written across the windshield of a car.

The only costs the dealer does not have to specify are state and local taxes, registration and title and tag fees — expenses required by the government, not the seller.

While the opinion does not carry the force of law, it serves as a guideline for prosecutors about how the law applies.

Kent Perez, assistant attorney general in the consumer section, said the advertisements come under the state Deceptive and Unfair Trade Practices Act, which carries a fine of up to $5,000 for each violation.

Butterworth issued his opinion after two buyers complained to the state attorney's office in Pensacola's First Judicial Circuit that the advertised price of vehicles they wanted to buy did not match the actual price.

Assistant State Attorney Jerry Allred said that one north Florida customer, for example, found a $99.50 fee tacked onto the $4,995 price of a Chevrolet El Camino truck. The fee was for inspecting and cleaning the car, interest on the loan the dealer took out to buy the vehicle for resale and for processing paperwork.

The dealers argued that their advertisements were truthful because they mentioned there were extra charges without specifying the amount, Allred said.

Allred said his office is sending a copy of Butterworth's opinion to all the dealers in its four-county jurisdiction.

"Any future complaints we'll have to examine . . . on a case-by-case basis," he said.

Meanwhile, the Tampa car dealers' group is considering a code of ethics for automobile advertising that would require the organization's members to add the handling fee to the advertised price of the vehicle.

Colorado prohibits heavily tinted glass

DENVER — A new Colorado law banning tinted windows in motor vehicles that allow less than 27 percent of light through them went into effect Jan. 1.

According to the law, front windshields must allow 70 percent light transmittance.

Darker tints can be used on the rear window and the rear side windows, but in such cases the front side windows must allow 70 percent light transmittance.

Violators face a $50 fine.

The Colorado State Patrol plans to enforce the new law like any other traffic violation, said Trooper Mark Anello. Cars may be pulled over if the tint is believed to be too dark, and troopers will carry a demonstration card that is a bit darker than the allowed tint to use as a gauge, he said.

The law's sponsor, Rep. Dick Bond, D-Greeley, said there are two reasons the law is necessary. The main one is that a motorist needs to see other drivers for safety reasons, he said.

The other is the protection of police who may not be able to see a car's occupants through the tinted glass when they approach the car.

New training center to help Jaguar play catch up

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A spate of new automotive technology combined with a force of unprepared technicians has prodded Jaguar Cars to step up its U.S. service training efforts.

The British carmaker has opened the first of three planned regional technical training centers in Atlanta in an effort to rapidly expand and improve its service network.

Jaguar officials said the new facility is sorely needed and will effectively double its annual service training program.

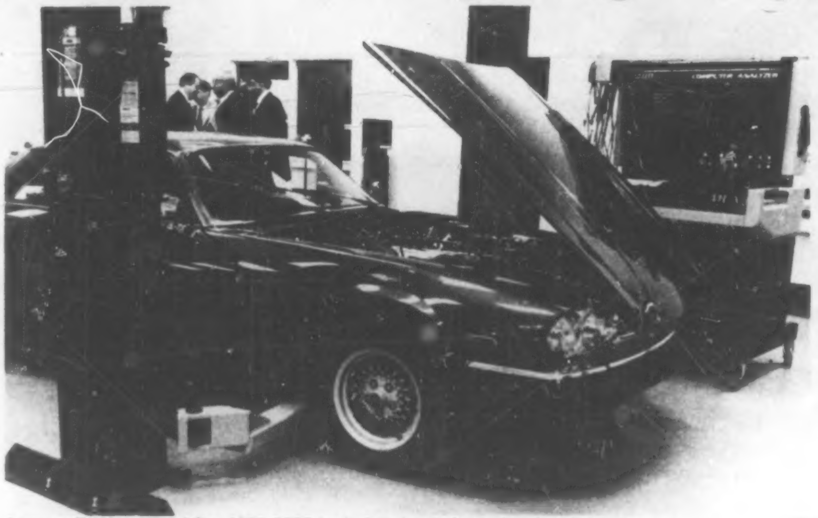
The center will provide Jaguar dealers with 45 weeks of additional training classes a year. Two concurrent week-long classes of eight technicians each will be conducted 45 weeks of the year.

"Sales have increased very rapidly for us since 1980, and now we need to accelerate our training program very, very quickly," said Michael H. Dale, senior vice president, sales and marketing. "Obviously, we weren't doing enough training before. Now we're playing catch up. We have a lot to do."

Until now, all service training was conducted at the company's Leonia, N.J., headquarters, and in the Jaguar Western zone office in Brisbane, Calif. The expansion plans call for a larger West Coast center to be opened in April near Los Angeles, replacing the Brisbane facility, and for a third center to open early next year at the new corporate headquarters now under construction in Mahwah, N.J.

"We are doubling our training effort with this facility," Dale said. "It will mean that we can take every single technician in the Jaguar network and train him for an extra week every year."

Jaguar officials candidly acknowledge that the car's belated but sudden move into on-board computer technology left service personnel around the country in the dark. The appearance of a new on-board eight-computer network in 1988 models came as a shock to many, since prior models contained no computer electronics at all.



Jaguar will recommend Sun MCA 3000 to dealers for their service departments

The revisions seem to have changed the composition of the technician body because many older service personnel are resisting learning the new technology.

"Very little about the Jaguar has changed over the years. Now, suddenly, it's a very different car," said Bill B. Burris, service training manager for the company. "We're finding that we're losing the older technicians. The technology is going beyond them. When it comes to the black boxes, they're lost, and they're not coming in for training."

To address the problem, training classes in the Jaguar program are making greater use of computerized system analyzers, the increasingly common diagnostic devices that give service personnel readouts on engine and on-board computer functions. New classrooms are equipped with the specially designed Jaguar Diagnostic Systems, and technicians are instructed both in how to read the car's own on-board analysis and how to use the diagnostic equipment to spot errors in the on-board computer readouts.

Training in electronics and introductory technical classes are the two classes requested most frequently by the company's dealers, especially since the car — in Burris' words — "went from '60s technology to '80s technology in two years."

The week-long classes are divided into 30 percent theoretical and 70 percent hands-on training in adjacent shop areas.

"We've put together a curriculum that brings Jaguar up to industry standards," he said. "For instance, we'll be training our people to qualify for the Automotive Service Excellence program for the first time."

Special attention at the new centers was given even to such minor details as "non-disruptive" wallpaper and expensive wood paneling in the center foyers to enhance the prestige of the training program, he said.

The company also recently began recommending that its dealers purchase the $30,000 Sun Computer Analyzer, an IBM-PC-based diagnostic system that allows technicians to analyze more than 3,500 different models of cars and trucks.

A Sun representative said the newly designed system, an MCA 3000 that is capable of communicating 1,000 diagnostic messages, has not yet been adopted by any Jaguar dealers, although two are in use in Jaguar's training centers — one in the Atlanta area and one in New Jersey.

The system will be recommended to dealers as part of a new national equipment program unveiled last week. The list of 16 tool and service machinery suppliers is Jaguar's first national program.

The service program, which will go into effect in early March, will be expanded during the next few months as more equipment is selected, according to Sheila Woolsey, service equipment and literature manager. The company said it did not yet have an estimate of the program's total cost to dealers.

Dale said that changes in Jaguar's U.S. dealer body during the past several years gave a sense of urgency to improving and expanding its training and service support. Half of the company's dealers have changed since 1980, and their number has declined by 40 percent. In the past two years, the remaining 142 dealers have invested more than $200 million in new facilities, according to the company. "There's clearly a sense of change within our operations," Dale said.

Shop volume up for year; month dips

By Wes Raynal
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts volume at new-car dealerships increased for the first 10 months of 1988, but dipped from year-ago figures in October.

In October, overall shop volume fell 0.5 percent from the same month in 1987, according to the Automotive News Service Index. Shop volume for the first 10 months of 1988 was up 3.4 percent.

The number of repair orders written dropped 5.1 percent from the year-ago figure in October and slipped 0.7 percent for the first 10 months of 1988. Still, gross profit for the first 10 months rose 6.8 percent, but fell 2.9 percent in October from the same month a year earlier.

Several dealers attributed the year-to-date increase to the colder weather:

"Our volume normally goes up at this time of year because customers bring their cars in for winterizing, and we tow more broken-down cars at this time of year," said a service manager in the Northwest.

A service manager in the Midwest also attributed his increase to the weather, saying the number of customers needing winterizing prompted him to hire an additional technician to handle the increase in volume.

Labor sales (customer paid and warranty) rose 2.2 percent in October over the same period a year ago, but fell 2.5 percent for the first 10 months of 1988.

Parts sales (customer paid and warranty) rose 6.1 percent in October compared with October 1987, and 6.7 percent for the first 10 months of the year.

Parts sales (including over-the-counter sales and accessories) fell 2.8 percent in October 1988 compared with the year-ago figure. However, those sales grew 6.6 percent for the first 10 months of 1988.

The volume of over-the-counter parts and accessories (not including repair-order sales) declined 8.6 percent in October from the year-ago figure, but rose 6.6 percent for the first 10 months of 1988.

In October's survey, service managers commented on whether manufacturers improved the engine layout on 1989 models.

A service manager in the East said that while accessibility has improved somewhat over previous models, the starter on General Motors' Quad 4 engine is "very inaccessible."

SERVICE INDEX
99.5*

	Oct., '88 vs. Oct., '87	10 mos., '88 vs. 10 mos., '87
Gross Profit on All Labor and P&A Sales	−2.9%	+6.8%
Repair Orders Written	−5.1%	−0.7%
Total Labor Sales (Customer & Warranty)	+2.2%	−2.5%
Shop Parts Sales (Customer & Warranty)	+6.1%	+6.7%
Sales of All P&A	−2.8%	+6.6%

* Survey by Automotive News shows that dealers' service and parts business in October 1988 was 99.5 percent of business in October 1987. Service business in the first 10 months of 1988 was 103.4 percent of business in the corresponding period in 1987.

FORD WINS: *Court rules Autolite divestiture did not include trademarks*

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Ford Motor Co. can continue to use certain of its trademarks — the Ford oval, "speeding car" and "Motorcraft" — because they are not covered by the 1970 consent agreement in which Ford sold its Autolite battery-making division.

The trademark ruling came in Ford Motor Co. vs. Summit Motor Products, a federal district court case in New Jersey.

The litigation started in 1984 when Ford sued Summit Motor Products Corp. of New Brunswick, N.J., and other aftermarket parts makers for infringing and counterfeiting trademarks and copyrights. Ford was countersued by Altran Corp , an aftermarket parts maker based in Deer Park, N.Y.

In the early 1960s, the Justice Department challenged Ford's acquisition of part of Electric Autolite. In 1970, the case was settled by a consent agreement that ordered Ford to divest itself of Autolite.

The question raised in the recent case was whether other names and logos were part of the Autolite operation — and hence could be used by aftermarket distributors — or whether they were Ford's alone.

Altran charged that Ford developed its "speeding car" and made it part of the Autolite trademark before divestiture but had concealed that act from the government and the court. Altran charged that all three trademarks were "improvements, betterments, replacements and additions" to the Autolite trademark and should have been divested by Ford when it sold the division to Bendix Corp.

Judge Nicholas H. Politan ruled that Altran did not have standing to sue because it had not been a party to the agreement ordering divestiture. Even if Altran had standing, it would still have lost its case since the three trademarks in question are not mentioned in the decree, Politan ruled.

The decree does mention the trademark Autolite. For Altran to win its case, it would have had to show that Ford had concealed ownership of the three trademarks for the 18 years before and after the decree, Politan said. In fact, Ford used the "speeding car" with Autolite since 1968 and the Justice Department knew that Ford had used the three trademarks as early as 1971 — one year after the decree.

SHOP TALK

WES RAYNAL

Rolls-Royce updates painting process

After 15 years without upgrading its painting processes, Rolls-Royce will open a new $18 million paint plant at its Crewe, England, works in July.

The new facility will end the practice of pushing partially prepared bodies outside to make space in the cramped shop.

Bodies-in-white will be transported in a covered overhead conveyor to the new paint plant. A Rolls-Royce spokesman said paint quality "will be to the standard the customer is used to," but will be achieved with fewer worker-hours.

The epoxy primer will be applied in an electro-cathodic tank, which will make the coating more resistant to stone chipping.

The shop will switch to an acrylic topcoat that will be used on almost all colors except black, which will still use cellulose.

Undercoating techniques will not be modified, but the wax injection of panels and closed body sections will include all areas.

Mitsubishi cuts prices

Mitsubishi Motor Sales of America has announced price reductions on selected sheet metal and other repair parts for authorized Mitsubishi Motors' vehicles, including Mirage, Galant, Sigma, Van/Wagon, Montero and trucks.

Included parts are disc brakes, clutches, fenders, strut and arm assemblies, mufflers, fuel and air filters, fuel pumps, engine components and electrical components.

Another record year

Sales total 5,195,458; all segments up

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales, including light, medium and heavy models, totaled a record 5,195,458 during the 1988 calendar year, up 4.69 percent from the previous record of 4,962,928 set in 1987.

All eight segments of the truck market scored sales gains last year, with Class 4 the fastest growing.

Ford's Super Duty model was solely responsible for Class 4's tenfold gain to 21,181 sales for the year.

Light-duty sales in Classes 1-3, including an increasing number of imported commercial vehicles, totaled 4,861,007, up 3.99 percent from 1987.

Class 8 had its best year since 1979 on sales of 148,361, up 13.12 percent from 1987.

Class 6 also had a major gain on sales of 53,599 units, up 21.04 percent from 1987.

Classes 5 and 7 had marginal gains. Class 5 sales of 8,268 units were up moderately from 8,185 a year earlier. Likewise, Class 7 sales of 103,042 were up only slightly from 102,583 in 1987.

Class 7 has been a particular disappointment so far for the many manufacturers who fielded so-called new "Baby 8" models.

Most medium- and heavy-truck manufacturers had gains last year, though Mercedes' medium-duty models continue to be a problem for Freightliner.

Mercedes' 3,006 retail sales were off 21.47 percent from 1987's 3,828 tally.

VW-Toyota pickup built; VW denies cars are near

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BRUSSELS, Belgium — A technical cooperation agreement between Volkswagen and Toyota bore fruit this month when the first Toyota-based VW Taro pickup truck was assembled in a VW plant in Hannover, West Germany.

The project is Toyota's first manufacturing venture in Europe, and some observers see it as a possible prelude to joint passenger-car production with VW.

However, earlier this month, VW officials discouraged talk of further cooperation, while Toyota appeared more interested.

The Taro is being launched three years after chairmen Carl Hahn of VW and Eiji Toyoda of Toyota first met to discuss cooperation on a one-ton pickup. The agreement was signed in June 1987 and called for a combined investment of 90 million marks ($50 million).

The VW truck, which debuted at the Brussels Truck Show, is built under license from Toyota and is based on the Toyota Hi-Lux. The Taro won't be sold in the United States.

In 1989, VW will produce about 7,500 two-wheel-drive Taro and Hi-Lux vehicles. Combined output next year is slated to reach 15,000.

"This is the planned ceiling for the next period of time," said Rolf Hartermann, VW sales director for commercial vehicles.

Of the 15,000, about 10,000 will be badged as Taros and sold by VW in Europe. The rest will be marketed as Hi-Lux models by Toyota in Europe.

European content is minimal at the outset but will reach 40 percent by the end of 1989 and rise from there. Hartermann said VW intends to achieve local content of 60 percent to 80 percent. The percentage will be largely governed by the ongoing political debate over whether the minimum level for distribution within the European Community as European-built should be 60 percent or 80 percent.

VW said the venture gives it a new model for a growing European segment in which it had not been represented, and for a moderate investment.

Hartermann said the one-ton pickup was a precise need for VW and that the agreement is not a harbinger of further cooperation.

Last year, sales of one-ton pickups totaled 68,000 in Europe, an increase of 7,000 over 1987, Harterman said. "We think that segment will be 80,000 to 90,000 units within two or three years,"

Toyota and VW appeared to have differing views on whether the venture can lead to further cooperation in Europe, where Toyota is weighing its options for setting up a car factory.

"I hope that this project will serve to bring our two companies even closer together as cooperating partners," said Toyota Executive Vice President Tatsuro Toyoda during a speech in Hannover.

In his own remarks, however, Hahn said "I can assure you that any further speculation on our joint venture will remain sheer conjecture."

Meanwhile, Toyota is talking with Renault about possible collaboration on a 4wd vehicle in Colombia, and there have been reports that Renault and Toyota are discussing joint-car production in France.

Toyota and Renault have both denied that a European carmaking venture is in the works.

VW Taro: one-ton pickup

Month's car sales dip again in Canada; trucks advance

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canada's domestic and imported car sales declined for the second consecutive month, with November figures registering a 1.19 percent decrease compared with a year ago. Truck sales, however, posted a 5.75 percent increase.

During November, 119,973 domestic and imported vehicles were sold: 56,982 domestic cars; 23,861 imported cars; 33,588 domestic trucks; and 5,542 imported trucks.

Total vehicle sales on a year-to-year comparison found 1988 still leading 1987 by a slender 0.97 percent — 1,455,550 vs. 1,426,158.

Car sales had slipped 6.83 percent in October. But as in October, November's downward trend in car sales was paced by imports, which dropped 19.31 percent, compared with November 1987. Imports were down 9.18 percent for the January-November period.

North American-built cars, however, were up 9.07 percent in November, led by Ford's booming 36.94 percent jump. Ford of Canada's car sales, spurred by $500 ($400 U.S.) rebates on Ford Tempo/Mercury Topaz and specially priced option packages, were the highest since 1975. For the January-November period, the company was 10.12 percent ahead of last year's sales.

Sales of Chrysler's North American-built cars were up 19.02 percent over November 1987 and up 1.16 percent for the 11-month period.

General Motors' sales of its North American-built cars were down 10.81 percent for the month and 1.78 percent for the year.

Import sales were generally down. Among the major importers, Volkswagen dropped 35.86 percent in November and 16.40 percent year-to-date, while Hyundai slipped 35.72 for the month and 39.36 percent year-to-date.

Also posting decreases were Nissan, with a 19.88 percent decline for the month and 15.87 percent year to date; and Mazda, down 14.37 percent for the month. Mazda, however, was up 4.08 percent for the year.

GM's import sales dropped 2.97 percent in November but sales were up 14.29 for the 11-month period.

Honda's 16.91 percent decline in import sales during November was the result of its gradual shift to Canadian-built Civics as its Alliston, Ontario, plant builds up production. A 191.74 percent increase in domestically built Hondas pushed total Honda car sales up 18.04 percent for the month. Year-to-date sales were 3.24 percent ahead of last year's.

While total car sales were down, truck sales were the bright spot in November's figures, and gave importers something to cheer about.

A giant 67.96 percent monthly gain by Toyota and a substantial 30.48 percent increase by Mazda more than offset a 32.28 percent loss by Nissan to push overall imported truck sales 21.83 percent ahead of November 1987. Total year-to-year imported truck sales were up 4.06 percent.

Domestic trucks also moved ahead, although not to the same degree as the imports. GM's 14.11 percent November increase overcame a 5.79 percent loss by Ford and a 0.74 drop by Chrysler to pull monthly domestic sales up 3.50 percent. Year-to-date sales were up a healthy 10.73 percent.

Total November domestic and imported truck sales were up 5.75 percent over a year ago, from 37,001 to 39,130, and year-to-date sales were ahead 9.68 percent, up from 432,342 to 474,202.

Small rental firms battle surcharge at L.A. airport

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Small car-rental firms contend a proposed surcharge by Los Angeles International Airport will drive small firms out of business and raise rental prices for travelers.

Officials of 24 car-rental companies located near the airport have banded together to protest the plan by the Board of Airport Commissioners to charge firms up to 10 percent of their gross annual revenue to help pay for upkeep of airport property.

The small rental companies called the proposed fees, which also would be applied to the Ontario, Calif., airport, discriminatory and warned that they will drive up prices.

"We (the smaller companies) offer customers a choice of inconvenience but lower rates," said Ted Anderson of Thrifty Car Rental. "Without us to keep them at a reasonable level, car rental rates will skyrocket."

Anderson said smaller off-airport rental firms are able to charge up to 30 percent less than the larger companies. If the surcharge goes into effect, prices would have to go up as much as 35 percent, wiping out the advantage, he said.

Anderson said the 24 off-airport firms account for less than 10 percent of the total car rental business at Los Angeles International. He claimed that the income of the five major on-premise rental companies increased up to 74 percent last year.

An airport spokesperson said the five on-site companies already pay 10 percent of their gross annual revenue, which brought in $18 million last year.

Off-airport rental firms counter that those fees allow the majors free passage of their shuttle buses as well as desk space in terminal areas. Off-airport companies have to pay 35 to 75 cents per trip to drive on airport property, and have no counter space.

How car salesmen and dealers can make twice the money with half the time and effort

I earned more selling cars when I stopped working hard and started working smart.
Write $35,000 to $50,000 gross every mo. using the mercenary tactics I've developed.
This revolutionary new book shatters the myths that don't work in the real car business.
I sell a lot of cars and blow away competing dealers. To do the same read my incisive book, **Confessions of a Car Salesman; A Mercenary Guide to Selling.** Send $19.95 to: Excess Press, 321 E. 262nd St. Cleveland, Oh 44132
100% refund if not completely satisfied.

Leaving Money On The Table??
Is there room for improvement in your front end? Could your sales managers and F&I manager use a revitalizer? Are your sales "pros" qualifying "ups" *before* they're in the door? Do your "green" salespeople *really* know how to control the customer, let alone follow 'em up? How are your phone ups being handled? The money that's left on the table in just one week could pay for this successful program!
Say HELLO To Bigger Profits ...INSTANTLY!
Meet the Elite Edge! The Elite Edge offers you a *one on one*, 5 day in house front end tune up seminar that will give your dealership *professional*, experienced review and training *custom fit* for your store! We utilize innovative, *proven* techniques that will improve the efficiency of your staff *and* improve your bottom line. All while increasing your CSI!
Call today for confidential information or appointment. *It* could be the best move you make for your dealership in 1989!

Car output for year tops '88 by 18%

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic output of 154,142 cars increased 5.30 percent over the previous week's 146,380 and jumped 20.64 percent over the year-ago week's 127,768. The year-ago week's build was affected by downtime at several plants for inventory adjustment.

So far this year, 412,332 cars have been assembled, 18.59 percent more than the 347,691 completed last year at this point.

Companies split last week's estimated output as follows: General Motors, 48.10 percent; Ford Motor Co., 28.49 percent; Chrysler Motors, 10.96 percent; Honda of America Manufacturing, 4.93 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.13 percent; New United Motor Manufacturing Inc., 2.53 percent; Nissan Motor Manufacturing Co. U.S.A., 1.52 percent; and Diamond-Star Motors, 0.34 percent.

Truckmakers scheduled 92,818 units last week, 6.77 percent more than the prior week's 86,932 and 9.87 percent above the year-ago week's 84,478.

Year-to-date, 248,368 trucks have been assembled, an increase of 1.62 percent over the 244,404 built last year at this time.

GM's increased Corvette output at its Bowling Green, Ky., facility from 11 cars per hour to 13 cars per hour. The increase has brought 57 employees back to work.

GM's Pontiac Central truck plant in Pontiac, Mich., was idle last week for inventory adjustment, affecting 2,400 workers. The plant was expected to resume production today.

Chrysler added a second shift to its Newark, Del., plant today, increasing output of its new Dodge Spirit and Plymouth Acclaim models from 481 per day to 962 per day. A total of 1,500 employees were called back to work.

GM scheduled overtime last Saturday at its Flint, Mich.; Pontiac, Mich.; and Fort Wayne, Ind., plants.

Overtime was slated last Saturday at Ford's Lorain, Ohio, Wixom, Mich.; and Wayne, Mich., plants.

All Ford plants are scheduled for daily overtime this week.

Trucks retain lead in Canada

Canadian truck production continued to top auto output as the truckmakers scheduled 21,382 units last week.

Last week's targeted build was 11.33 percent more than the prior week's 19,206 and 10.92 percent above the year-ago week's 19,277.

Year-to-date, 57,016 units have been assembled, 6.34 percent more than the 53,615 completed last year at this point.

Auto output was scheduled at 19,813 units last week, 5.02 percent more than the previous week's 18,866 and 1.89 percent above the year year-ago week's 19,445.

So far this year, 51,268 cars have been built, 22.02 percent below the 65,744 assembled last year at this time.

Hot topic: shakeout of dealers

Money problems stir survival fears

AUTOMOTIVE NEWS ROUNDUP

The plight of financially strapped dealers, upending some and impacting many, gained momentum in 1988 as premium-make import stores reported red ink, big domestic-make dealerships folded and megadealer operations filed for bankruptcy.

While it's too early to judge the long-term consequences of the events, some experts believe a full-scale shakeout may be under way, an economic survival of the fittest that prunes marginal operations — large and small, import and domestic — and trickles down to even well-managed, financially sound dealerships.

Some believe that the shakeout will not only alter the retail distribution system, but also force manufacturers and importers with marginal penetration to reconsider their market presence.

It also is likely to affect the evolving relationship between megadealer and factory, giving shakeout survivors more clout.

Some experts believe the consumer will be the ultimate benefactor as unworthy dealers fold. Others say the consumer will lose because megadealers will be able to reduce or eliminate price competition in any given market.

John J. Ferron, a partner in J.D. Power and Associates, said that a recent Power survey shows 4 of 10 average-sized dealers expect a shakeout in the next two years, and so do 6 of 10 high-volume dealers.

One of 5 average-sized dealers and 1 of 6 high-volume dealers expect to drop a brand in the next few years. Also, as carmakers improve quality, reliability and durability, quality of dealers will become the biggest factor in brand differentiation.

"It's not a fight between good and bad dealers, but between good and nearly good dealers," Ferron said. "It's that critical."

Last year, when the overall national car and truck market was strong, there were some highly visible failures — the 10-dealership Pepe chain in New Jersey, Jim Johnson Chevrolet in Texas, Grand Chevrolet in California — and others less visible, but just as painful for dealers and customers alike.

Although few bankrupt dealers are willing to step forward and detail the events and causes that led to their demise, a document filed last August early in the Pepe bankruptcy did just that.

The document, filed by an attorney for the Pepes, blamed premature expansion but said there was no single cause for the "out-of-trust" dilemma that led to the Chapter 11 petition.

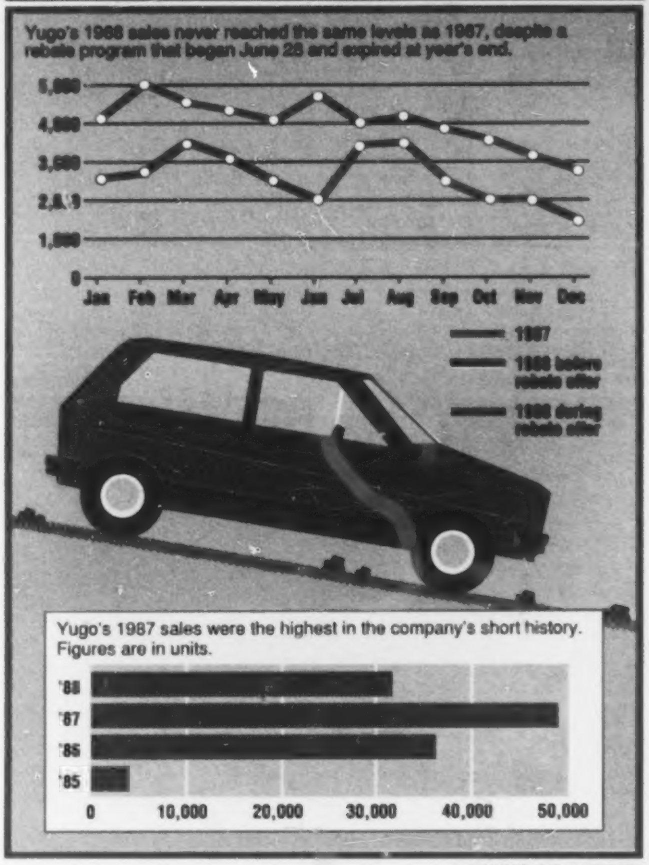
Yugo's rocky road



AUTOMOTIVE NEWS / K.B. GHOLSTON

Global struggles to remain afloat

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

UPPER SADDLE RIVER, N.J. — As Malcolm Bricklin prepared to dazzle dealers at the National Automobile Dealers Association convention in New Orleans with a plan to open a 1,000-dealer chain, the company he founded found itself on the ropes late last week.

Global Motors, the U.S. distributor of Yugo subcompacts, last week laid off another 90 employees as it negotiated with a contingent of Yugoslavians and potential suitors to stave off bankruptcy.

Those layoffs were from what was decribed earlier as a "skeleton crew" of a 150 left after 71 employees, including president and chief executive William Prior, were pink-slipped last November.

Among those laid off last week were Anthony T. Ciminera, executive vice president, product planning; and Dan Prior, who had been the executive in charge of the Proton effort, sources said.

Meanwhile, the Malaysian maker of the Proton Saga said last Friday that the agreement with Global for U.S. distribution is terminated.

And officials of the Mabon, Nugent investment firm acknowledged last week that the firm has already written off its $10.5 million investment in Global Motors as a total loss.

Chapter 11 bankruptcy looms as a possibility for Global, said Per Arneberg, a former board member and a shipping broker who was one of the original investors and still owns 18 percent of the company.

"I couldn't give it away," Arneberg said of his stake in Global, the parent company of Yugo America, importer of the Yugo subcompact. "Would you like it? I'll give it to you."

Another source said Global needs as much as $100 million in financing to turn itself around.

Arneberg said he felt the company grew too big, too fast and tried to do too much at once.

Yugo entered the U.S. market in 1985 with fewer than 4,000 sales and approached 50,000 in 1987. But sales fell 26 percent in 1988 despite rebates of up to $750, first-time-buyer financing and product changes to improve the car's image.

2 CSI VIEWS

Payton sees maker default; Petersen urges cooperation

AUTOMOTIVE NEWS/JOE WILSSENS

Incoming NADA president Ron Tonkin, left, and his predecessor, Jimmy Payton

NEW ORLEANS — The heads of the National Automobile Dealers Association and Ford Motor Co. opened the 1989 NADA convention with appeals for closer relations between dealers and manufacturers while offering sharply different views on industry surveys that measure customer satisfaction.

In remarks prepared for the opening session of the association's 72nd annual convention Saturday, NADA President Jimmy Payton suggested that some makers are paying lip service to the ballyhooed goal of pleasing the customer.

"In 1988, we saw what appears to be a big shift in the way some manufacturers view CSI (customer satisfaction indices)," Payton said. "All of a sudden, CSI looks like it will take a back seat to sales performance."

Ford Chairman Donald Petersen, in the text of his keynote address, said he was distressed by the disagreements that manufacturers and dealers have had over the ratings, which use surveys to measure a customer's experience at the dealership. He urged joint efforts to resolve those differences .

Neither party can afford to waste time, Petersen said. The 1990s will be marked by heightened global competition and improved product quality, he said, and those trends will help establish the dealership as the place where makers can set themselves apart

TIME: *Fusz chosen Quality Dealer of Year; St. Louis giant has 6 stores, 11 lines*

NEW ORLEANS — St. Louis dealer Lou Fusz Jr. has been named 1989 Time Magazine Quality Dealer of the Year.

He is president of the Pontiac/Nissan/Mazda/Rolls-Royce/Bentley dealership in St. Louis that bears his name. He also is president of Lou Fusz Dodge, Lou Fusz Subaru-Isuzu, Lou Fusz Suzuki, Lou Fusz Toyota and Lou Fusz Chevrolet in St. Louis.

As the magazine's top honoree, Fusz will serve as national spokesman for the 67 recipients of the Time Magazine Quality Dealer Awards.

The winners were selected by a panel of judges from the University of Michigan Graduate School of Business Administration. Judges singled out the dealers for "exceptional performance in their dealerships, combined with distinguished community service."

A native of St. Louis, Fusz was graduated from Georgetown University in Washington and served in the U.S. Army Reserve. He and his wife, Corinne, have five children and live in St. Louis County.

He began his automotive career working in the family-owned business, Lou Fusz Motors, a Pontiac point.

Import group spends big in politics

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A little-known political action committee formed primarily by import car dealers spent twice as much as the National Automobile Dealers Association's own PAC during the last election and has emerged the country's third largest such committee.

Based on its 1987-88 campaign spending report, Auto Dealers and Drivers spent $2.8 million.

That figure surpassed spending by NADA's Dealer Election Action Committee, which doled out $1.3 million in contributions last year.

The largest PAC is organized by the National Association of Realtors, which spent $5.5 million. It was followed by DRIVE, a Teamsters-backed committee whose campaign expenditures were $3 million.

In contrast, the UAW spent $1.3 million on the last campaign.

Auto Dealers and Drivers was organized by New York dealer Tom Nemet and a handful of import dealers including Ted Connelly, an Ohio car dealer and a former chairman of the American International Automobile Dealers Assocaition.

The PAC confined itself to trade issues and labored in relative ob-

Young, former sales chief, succeeds VW's Fuller

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Volkswagen United States has begun rebuilding its management team by naming William J. Young, an auto consultant and former VW general sales manager, as its No. 1 executive.

Young will take over as vice president in charge of Volkswagen U.S. Wednesday. His appointment last week ended a month-long search for a successor to James R. Fuller, who was killed Dec. 21 in the explosion of Pan Am flight 103 over Scotland.

Young, 45, will be part of what will soon be a virtually new staff of chiefs within Volkswagen of America, an organization that has suffered through much turmoil in recent years.

A month after Young arrives, Hans-Jorg Hungerland will take over as president of VWoA, parent company of the VW and Audi divisions. Audi's top official, Richard Mugg, was named to the job a year ago.

Dealers who know Young from his 12 years in the organization applauded the appointment. He was described as a candid, decisive executive with strong views and a sharp marketing sense. One dealer called him a motivator who will bring fun to the business of selling VWs. He is said to be hard-working and energetic, in the mold of his predecessor, Fuller.

One of Young's first missions will likely be to select a marketing director. The previous head of marketing, Lou Marengo, also died aboard the Pan Am flight.

"Young's appointment will be greeted as good news to the dealers, who are still reeling from the terrible tragedy," said Raymond Ketchledge, who once worked with Young at VW and is now president of Sandy Corp., which is down the street from VW headquarters. "With him and Hungerland coming into that organization, and with Mugg already there, management strength will really move in a positive way."

Young will vacate an ocean-view home and office in Manhattan Beach, Calif., to join VW. He left VW in 1983, when the company moved its headquarters from Englewood Cliffs, N.J., to Troy.

His consulting business, W.J. Young Associates, has served distributors and importers as well as dealers.

Young is said to have made the move because he respects Hungerland, has a lingering loyalty to the organization and believes he can lead the company in a rebound.

While VW sales have fallen steadily in recent years, the organization had been looking forward to 1989 because of three new car launches. Instead, Volkswagen U.S. entered the new year in a state of shock after the deaths of its top two officials. Young's appointment, a spokesman said, will do much to fill the void.

The new products include the Corrado, a sports car scheduled to arrive this summer, and the Passat, a family sedan due this fall.

Young's appointment was announced jointly by Hungerland and current VWoA President Noel Phillips, who leaves the job March 1 to become head of Autolatina, Volkswagen AG's joint venture with Ford Motor Co. in Brazil.

Hungerland worked for VWoA from 1980 to 1983, when he returned to the parent company in Europe. Hungerland is expected to arrive in the United States in mid-February for an orientation of sorts before taking Phillips' place.

Young, too, will be active before he officially begins his new job. He was scheduled to be in New Orleans this past weekend for the National Automobile Dealers Association convention.

Several dealers said a new incentive program will help stimulate some sales while Young becomes adjusted to his new job.

At the start of the year, VW began offering financing as low as 4.9 percent on 1988 and 1989 Golf, Jetta and GTI 16-valve models. The program expires March 31.

Young began his career with VW in 1971 as a sales manager in the Pacific region. Five years later, he was named a regional manager in Washington. He was general sales manager of what was then called the Volkswagen Division from 1979 to 1983.

Public chains buy outlets in Britain's strong car market

By Daniel Ward
STAFF CORRESPONDENT

LONDON — As Britain's third consecutive year of record new-car sales pushed up profits of publicly owned dealer groups, the idea of dealers never making attractive returns is steadily diminishing.

The last two years have seen significant upheaval in the United Kingdom auto industry as large numbers of dealer groups and smaller family-run outlets have been absorbed by the more aggressive public chains.

Both Lex and TKM have doubled their number of outlets, each through a single takeover. Meanwhile, smaller, ambitious chains that have gone public since 1987 have used their increased funding to go on the acquisition trail, seeking individual dealers in trouble and prepared to sell out.

When a major public group like Lex believes it could expand its present network of 62 United Kingdom, dealerships by 50 percent during the next three to five years, there is no doubt that there is a considerable number of outlets waiting to change hands.

RATING BRITAIN'S PUBLIC DEALERS
Average Financial Ratios

	1986-87
Operating profit margin	2.2
Return on net worth	19.9
Return on equity	8.8
Net Sales to total assets	3.4
Wages as % of sales	7.2
Working capital ratio	1.4
Liquidity ratio	0.8
Borrowing as % of net worth	90.9
Productivity:	
Sales per employee	$235,540

(1 pound sterling = $1.80)

SOURCE: SEWELLS INTERNATIONAL

Faced on one hand with rapidly increasing pressure from the car manufacturers to upgrade dealership facilities and on the other with escalating land prices, particularly in the cities, many of the less committed dealers will take the handsome cash offer from a major group and retire.

Even away from London, the predators are prepared to pay high prices in order to keep up their pace of expansion. Williams Holdings recently paid £7.5 million ($13.5 million) for three Volvo outlets and a small leasing firm. Lancaster spent £3.17 million ($5.7 million) to buy a Cambridge dealership, and it bid on a Ford dealership in Norwich, which Lex bought for £3.3 million ($5.9 million).

In April 1987, Lex spent more than £70 million ($126 million) on the Sears dealer group, doubling Lex's annual retail sales of £250 million ($452 million) in a single stroke.

Katsumaza Miyadai displays colored wheel tires to lure shoppers into his Tokyo Autorama outlet

JAPAN BOOM: *Makers add stores, staff to propel sales*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — In a country where car salesmen still make door-to-door calls, market share is directly correlated to the number of outlets and the size of the sales force.

Toyota has a 42.6 percent market share, based on a sales force of 43,500 at 4,260 outlets. Nissan's market share is 23.4 percent, with 27,000 salesmen and 3,000 outlets.

While Toyota has an independent dealer body, others like Nissan, have a mix of factory-owned and independent outlets.

Last year's booming domestic market has spurred manufacturers to rapidly expand existing networks and launch new channels in an effort to take a larger slice of the pie.

For example, Nissan Motor Co. hopes to complete a two-year plan this year that will add 600 outlets. Toyota Motor Corp. wants another 240 by 1990, while Mitsubishi Motors targets another 300 by the end of 1991. Honda Motor Co. is planning on another 160 sales outlets in 1989, and Mazda Motor Corp. is trying to expand one network and set up two

Ex-Commerce pair in Korea lobby

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Two former high-ranking Commerce Department officials, including one who was forced to resign after seeking employment from foreign-based auto companies, are now lobbying their former agency on behalf of Korean automakers.

Although the Commerce Department is sponsoring a seminar on selling auto parts to Korean automakers this coming May, a Department official said "there is no causal relationship between those individuals and our seminar." The official added, "the seminar is a result of an ongoing relationship we have had with the major Korean manufacturers for several years."

The commerce officials-turned-lobbyists headed similar seminars on selling auto parts to Japanese automakers while at the Commerce Department. Both left the department in 1987.

Robert E. Watkins, the former deputy assistant secretary for automotive affairs, is now a lobbyist for Kia Motors Corp. working for the Washington firm of Weatherly and Co.

Watkins' former boss at the Commerce Department, H.P. Goldfield, is representing Hyundai Motor Co. Goldfield was assistant secretary for trade development at the Commerce Department. Goldfield is now a partner with the Washington law firm of Swidler and Berlin.

Goldfield announced his resignation from the Commerce Department in June 1987 at a department seminar in Indianapolis on selling auto parts to Japan. The seminar coincided with high-level trade talks with Japan to increase purchases of U.S.-manufactured auto parts.

Watkins, who also participated in the U.S.-Japan trade talks on auto parts, quit his post after it was revealed he had written a letter to Japanese automakers soliciting their interest in forming a trade association.

News of Watkins' letter prompted calls on Capitol Hill for his resignation. Watkins had told his prospective clients he would protect their firms from "protectionist and xenophobic political action."

Korean automakers and the Korean government officials have made no secret of their desire to avoid the trade friction Japan has encountered over its automotive exports.

Chrysler to put 'A' in Mexico

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

TUCSON, Ariz. — Chrysler Motors plans to produce its new A-body sedans in Mexico and, if the demand in the United States warrants, export the cars here.

Jerome B. York, vice president, Dodge Car and Truck Division, told a press conference at the Spirit's unveiling that Chrysler will launch A-body production for the Mexican market in about a year. The car will be built at the automaker's plant in Toluca, Mexico.

According to York, Chrysler's Newark, Del., assembly plant is the only facility producing A-bodies for the U.S. and Canadian markets. "The plant's 200,000 production capacity will be split 50-50 between Dodge Spirit and Plymouth Acclaim," he said.

Asked if there are plans for exporting the A-bodies to the United States, York said, "No, there are no such plans, but that potentially could be a possibility down the road, depending on what the U.S. market demand is.

"If demand were to exceed the capacity of the Newark plant, then we would — as we have in prior programs — take a look at potentially exporting (from Mexico). But we would only do that if the Newark plant was sold out to the walls."

Because of the late startup, York said Dodge expects to receive only 60,000 Spirits in the 1989 model year.

Though he said Chrysler has no immediate plans to produce a two-door version of the A-body, he said "that is something we might look at down the road."

The A-bodies eventually will replace the Dodge Aries America/Plymouth Reliant America K-cars, which will be phased out of Chrysler's U.S. lineup this summer. York said 45,000 K-cars will be shipped from Mexico between January and June.

The sticker price for the base Dodge Spirit is $9,995; the LE model is $11,195; and the ES is $12,495.

Japan-built Subaru Legacy will hit U.S. stores next month

Subaru unveils new Legacy

TOKYO — Subaru introduced its new Legacy four-door sedan and wagon line last week in Japan and will hold the North American debut next week at the Chicago Auto Show.

The car goes into U.S. production later this year at the Fuji Heavy Industries' joint venture with Isuzu Motors in Lafayette, Ind. Subaru-Isuzu Automotive will produce both sedan and wagon versions at the new plant.

Versions of the car for the Japanese market will be equipped with 1.8- and 2-liter flat four-cylinder engines. A turbocharged 2-liter version also is available.

Fuji expects to sell about 4,000 units per month in Japan, at prices ranging from $10,216 to $21,696.

Legacy, like other Subarus, will be offered with a full-time, four-wheel-drive system. Other models are front-wheel drive.

Exports to the United States and Europe are expected to begin later in February at a rate of 13,000 units per month. Those models will be equipped with a 2.2-liter flat four-cylinder engine.

Subaru-Isuzu Automotive eventually expects to be build 60,000 Legacy models per year for sale through Subaru of America.

LEASING: *Retail up, but dealer resistance, consumer ignorance widespread*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Retail leasing is expected to account for the delivery of 1.5 million new cars and trucks in 1989, up from 1.3 million in 1988, despite widespread consumer ignorance about leasing and reluctance on the part of most dealerships to promote it.

A panel of industry officials reached those conclusions while providing a sweeping overview of other industry concerns at a recent meeting of the newly formed Michigan Chapter of the National Vehicle Leasing Association.

"It appears the market has been growing at roughly 200,000 units a year, and we don't see any reason for that to change," said Fred B. Winckler Jr., director — retail leasing for General Motors Acceptance Corp.

Panelists agreed that leasing got a boost in 1988's fourth quarter when GM announced its first corporatewide uniform leasing program for all new 1988 and 1989 vehicles.

"We were up 22 percent in the fourth quarter over the previous quarter, thanks to the publicity GM got," said Al J. Susalla, Michigan area manager — General Electric Capital Auto Lease, a unit of General Electric Capital Corp.

"If there are no drastic changes in the residual structuring and no major rate discounting throughout the industry, then GE is looking at an increase of at least 12 percent or even better in 1989," he said.

Even though retail leasing is growing, some banks are reporting lower volumes and blaming that on the aggressive marketing by captive finance companies like GMAC.

"The captive finance companies seem to be taking a larger share of the market," conceded Roland Bonamici, vice president — Instaloan division of the National Bank of Detroit.

Research by GM revealed the average consumer remains uneducated on leasing. The company has a program to educate dealership sales personnel on retail leasing.

"The single largest complaint from customers is they are put into a five-year lease and think they can get out of it in three or four years," said Winckler. "Another complaint is that in all too many cases, when a salesman discusses a lease in the dealership, he talks about the monthly payment and not the fine print. Customers get pretty upset when they find out the terms the hard way."

Since September, GM has conducted seminars for 9,400 dealerships and 54,000 sales people and, as a result, has gradually in-

Saturn still sights 500,000

New models to be based on original, analysts told

CRAIN COMMUNICATIONS ROUNDUP

DETROIT — General Motors' Saturn Corp. plans to make its annual production bogey of 500,000 vehicles by producing a variety of models based on the original Saturn car.

Saturn officials, who recently met with a group of about 25 Wall Street auto analysts, stressed that the Spring Hill, Tenn., plant will be so flexible that it can produce on the same line a mix of vehicles of varying styles, lengths and widths — from coupes to wagons — so long as the wheelbase is similar to that of the original Saturn car. Future Saturn vehicles will share components widely, analysts were told.

Analysts were told that the Saturn engines and transmission will be used only by Saturn. The size of the car was described as "right on the break" of a compact and subcompact, with 100 cubic feet of interior space being the dividing line.

AutoWeek, a sister publication of Automotive News, reports that the coupe has a 99-inch-wheelbase and the sedan has a wheelbase of 102.5 inches.

The mostly aluminum engine will be available in two versions, both with overhead cams. The single-overhead-cam eight-valve 1.9-liter produces about 90 horsepower, while the twin-cam 16-valve is rated at 115 hp.

Saturn was scheduled to hold a press conference during the National Automobile Dealers Association convention in New Orleans to formally sign previously announced California dealer candidates. The names of other dealers for California and for New York and other areas are also to be revealed at the press conference.

Saturn has declined to confirm identities of dealer candidates since two of those announced for Southern California withdrew late last year.

Analysts said product plans were not laid out for them, and their impression was that Saturn is leaving product plans open.

In earlier interviews, Saturn officials have indicated that Saturn may eventually offer vehicles other than cars. Though they would not be specific, that could mean sport-utility or van-type vehicles.

Saturn officials insist the GM subsidiary eventually will reach the originally planned 500,000 units — 5 percent of the automotive market — and get 80 percent of its sales from non-GM buyers. In 1986, Saturn announced it would produce only 200,000 to 250,000 cars a year initially. The second phase, of the same number, would be added at an unspecified time.

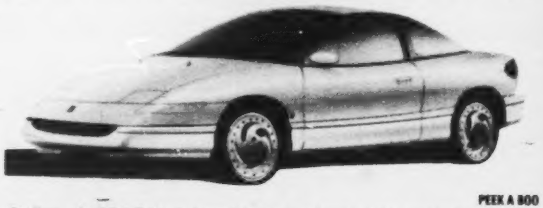
Analysts also were told that 0.5 percent of the components for the Saturn car will come from Japan, 2.5 percent from other countries and the rest from North America.

The Saturn car will be about as vertically integrated as any other GM car; that is, about 70 percent of the components will be made by GM's parts operations and the rest will come from outside suppliers.

Some analysts questioned after the meeting said they believe Saturn will be a success. Others believe establishing a separate company and separate franchise system to do what should be done throughout the corporation is a waste of money, even though Saturn officials said the project will come in at less than the $1.9 billion allocated. However, the most prevalent attitude expressed by analysts is one of reserving judgment until they see the car.

"Until we see the car, it's tough to say if it will work," said Wendy Beale of Smith Barney, Harris Upham & Co.

Analysts were given few details on the car. They were told the first clinics showed the Saturn design was unpopular, or "an absolute bomb," in the words of one analyst.



PEEK A BOO

Styling of 1991 Saturn coupe includes large glass areas and thin pillars in line with current sporty two-doors now on the market

They were told the consumers identified the car as a Chevrolet, which sent designers back to the drawing board repeatedly to make it more import-like.

Now, the Saturn car is more like a Honda or Toyota than an American car, Saturn officials told analysts.

Joseph Phillippi, auto analyst for Shearson, Lehman & Hutton, said he was concerned that the consumer clinics have not allowed potential buyers to drive the cars.

"They told us (former race driver turned entrepreneur) Roger Penske test-drove one and tried shifting without using the clutch, and he said it was a great transmission," Phillippi said. "I would feel more comfortable if a real live person off the street had driven the car." Penske owns several GM dealerships and is in partnership with GM in its heavy-diesel-engine business.

Dealer charged with bugging partner's office

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

BORDENTOWN TOWNSHIP, N.J. — A Ford dealer was arrested at his dealership here and charged with illegal electronic surveillance of another dealer in a dispute over the breakup of their partnership.

Peter E. Mercatanti, 47, of Washington Crossing, Pa., the owner of Mercatanti Ford, was also charged with conspiracy, said John C. McGinley, special agent in charge of the FBI office in Newark, N.J.

Mercatanti was arrested Jan. 10 and freed on $25,000 personal recognizance bond following a Jan. 11 appearance before U.S. Magistrate John W. Devine, a court clerk said.

The FBI said Mercatanti allegedly bugged the business office of Edward Judge of Judge Oldsmobile in Bordentown. Mercatanti admitted in a written statement that he bugged Judge's office, but said he did so because he believed he was being cheated.

Judge and Mercatanti were business partners from 1980 until June 1988, when the partnership was dissolved, the FBI said.

McGinley said the FBI learned of the alleged bugging after Mercatanti approached Judge in October 1988 and stated that he had obtained "damaging information" about Judge on tape.

The tapes would allegedly be used to discredit Judge unless he paid money that Mercatanti said was owed him, according to McGinley.

"Mercatanti allegedly told Judge that he had over 300 hours of information on tapes relating to Judge's personal and business activities," the FBI said in a prepared statement.

"Mercatanti convinced Judge that he did have access to confidential information by repeating portions of private conversations Judge had in his office at Judge Oldsmobile," the FBI said.

Mercatanti's lawyer, Paul Donini of Trenton, has issued a statement in which Mercatanti admitted planting the bug. Donini said he and his client had no further comment.

Mercatanti said in the statement that as of April 1988, he and Judge owned 49 percent each of Judge Oldsmobile. Mercatanti's cousin, Louis Mercatanti, owned the other 2 percent.

Peter Mercatanti said in the statement that he received an anonymous phone call that led him to believe that about $750,000 had been withdrawn from Judge Oldsmobile accounts without his consent.

He claimed that $500,000 had been loaned to Judge, and that his partners had allegedly used another $250,000 to invest in stocks.

"I admit that I placed the listening device in Mr. Judge's office, but I did so only after learning that I could no longer trust Mr. Judge and Mr. Mercatanti and did not wish to be disadvantaged by any deceit as we sought to terminate our business relationship," Peter Mercatanti's statement said.

Judge and Louis Mercatanti could not be reached for comment, but investigators said last week they had not been charged in the case.

If convicted, Mercatanti could be sentenced to up to 20 years in prison and fined $1 million, the FBI said.

A search at Mercatanti Ford revealed an electronic receiver and a reel-to-reel tape recorder with a timing device attached that automatically taped what was said in Judge's office, the FBI said.

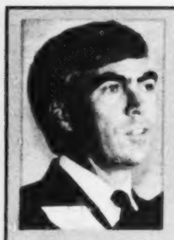
A second suspect, Jack Johnson, 55, of Castle Rock, Colo., was also charged, for allegedly assisting Mercatanti, the bureau said. Johnson turned himself in at the U.S. Courthouse in Trenton, N.J., and was released on $10,000 bail, said Assistant U.S. Attorney Robert A. Farkas.

FINANCES

FROM PAGE 1

The document concluded: "The group's rapid expansion with undercapitalized corporations and the soft automobile market exacerbated by outside factors beyond the group's control and internal factors such as weak management and lax financial controls led to the current 'sold out of trust' dilemma.

"The Pepe Group's strength has been its speed in adapting to market forces. Without sufficient working capital, the group has been forced on the defensive instead of its usual aggressive track."



Ferron: "It's not a fight between good and bad dealers, but between good and nearly good dealers."

Raymond E. Howard, a partner in the Big Eight accounting firm of Deloitte, Haskins & Sells who specializes in financial consulting for dealerships, said he cannot remember a time when he was busier with dealer consulting assignments. "Sometimes I feel like we are running a fire station," he said. "I've been going around the country for the past several months putting out fires. There have been some public failures we've all read about, but there are others out there that are in trouble."

While Howard's comment is a common one from people in his business, putting hard numbers on how bad dealer financial problems have become is highly speculative. But incoming National Automobile Dealers Association President Ron Tonkin, an Oregon megadealer, says that with dealer pretax profits below 2 percent of sales, troubled dealerships are likely to increase and problems could get worse before they get better.

Accountant Howard said some of the chain dealers he has worked with seem to have expanded too rapidly without fully considering their needs for cash. In many cases, he said, one or two profitable stores are floating money to losing franchises. "Everything is OK until a dealer has an off month or two, then we get a phone call," he said.

SOURCE: NADA

This year, with a new administration in Washington, economic uncertainties on the horizon and vehicle sales potentially on the wane, experts agree there likely will be more upheaval and failure in the ranks of franchised new-car dealers, although no-one is sure just how much carnage there will be.

However, those same experts — dealers, consultants, accountants, brokers and factory officials — are able to identify factors that have contributed to dealership financial maelstroms.

The list ranges from a shortage of experienced managers to factory retail rebates, from higher interest rates to overdealering and the proliferation of brands, and from the foolish reliance on too few franchises to the foolish acquisition of too many franchises.

Also cited are factory-required expenditures for ineffective computer systems, dealership undercapitalization, tighter credit policies by retail finance sources, distressed regional economies and more expensive floorplanning.

And to the extent that some problems hit uniquely at the megadealer, contributing factors cited include a loss of owner-entrepreneur involvement in the business, a lack of economies of scale and ineffective accounting procedures.

Debt is biggest problem

The single most-cited factor contributing to the decline and fall of new-car dealerships is debt — the way it is incurred, the way it is financed and serviced and the inability of many dealers to get out from under it.

There is no question that dealership balance sheet debt is the great abyss, but there seem to be no reliable measures of how deep or how wide the problem is.

Although NADA generates an impressive array of information about the automobile industry, NADA Executive Vice President Frank McCarthy said the association does not have a profile on the overall finances of automobile dealers.

"We don't have much factual information (on debt) even though we see dealer financial statements through our 20 Groups," he said. "It is really impossible to tell how dealers are leveraged through their financial statements since they may have other business and investments not reflected in their statements."

McCarthy said he doesn't think NADA as an association can do much to help overextended dealers.

"This problem is a function of the marketplace," he said. "Questions about expansion, financing, locations all have to be left to the dealer. We always say there are a lot of good dealers with good businesses, but they don't always stay the same from year to year. That is why we try to keep artificial restraints out of the market."

Still, McCarthy believes debt has become an increasing worry to automobile dealers due to reduced profit margins, slower sales and higher costs.

He said conversations with dealers across the country lead him to believe "debt is a major concern even though sales have held up at the national level."

Tonkin: The number of troubled dealerships is likely to increase and problems could get worse.

SOURCE: NADA

"For the individual dealer, profit pressure has been intense. At that level, retail sales are down and profits are down. There are simply more people out there selling cars and the average dealer is not selling as many cars as he did years ago," McCarthy said.

Fleet and rental companies are also buying more cars, according to McCarthy, although the majority of dealers do not handle the high-volume, low-profit fleet business.

"Competition is fierce and profits on cars are down," McCarthy said. At the same time, "a lot of dealers have expanded based on projections that sales and profits would continue at the same levels. They have not in most cases, and I would say dealers are watching expenses and are more and more careful about buying additional franchises. I am not saying they will not buy a new franchise, but they are being more careful," he said.

McCarthy explained that NADA is very concerned about the high level of consumer debt in the United States and believes that debt could result in a sales downturn for auto dealers. "If sales head downward, I think you will hear a lot more about dealer debt," he warned.

McCarthy said he thinks all franchises are about equally exposed to dealer indebtedness and profit pressure.

"I have heard a lot of talk in the past two years about dropping franchises that don't perform well, but this usually means replacing one franchise with another," he said. "I haven't heard anything to suggest that one manufacturer is being singled out by dealers and will be dropped nationwide.

"These days if you have an investment in land and a building, plus a good location and experi-

Pepe paper explains how dealer chain went down drain

EDITOR'S NOTE: On Aug. 24, 1988, husband-wife new-car dealers Richard T. Pepe and Virginia I. Pepe filed for protection from their creditors under Chapter 11 of the U.S. Bankruptcy Code in U.S. Bankruptcy Court in Camden, N.J.

At that time, the Pepes and their 10 New Jersey dealerships had $26.9 million in debts and were holding two checks — for a total of about $900,000 — that had been returned due to insufficient funds, according to General Motors Acceptance Corp. In addition, GMAC said the Pepe dealerships had sold $2.5 million worth of cars out of trust without remitting the proceeds.

Although the Pepes ultimately decided to auction the dealerships, they did submit a reorganization plan to one of their creditors and filed with the bankruptcy court. That plan included the following analysis by the Pepes of how the troubles began.

With clarion hindsight, the Group turns to examine the causes of its current cash flow crisis. Much like General Motors Corp. when operated by Chief Executive Officer Durand (sic) in two words, the primary and proximate cause of the problem was premature expansion.

No single factor in the Group's expansion can be directly attributed to the current "sold out of trust" problem, but each magnified by 11 automobile dealerships has led to the present situation.

The major factors which produced the current situation are as follows:

The recent aggressive dealership acquisitions have been at premium dollar amounts and in some instances for a sum in excess of the dealership's true worth.

The corporations formed to run the dealership (sic) were undercapitalized. When the dealerships did not begin making money immediately (a situation not previously experienced by the Pepe organization), the undercapitalized corporations were unable to support the losses, leading to a deterioration of working capital reserves and eventually a "sold out of trust" situation arose. This situation occurred in particular at Pepe Imports, Pepe Oldsmobile-Pontiac-GMC Truck and Pepe Buick-Oldsmobile-Cadillac.

The problem was exacerbated by soft automobile sales experienced in the industry, in general, and in particular in the southern New Jersey area, in the spring and early summer of this year. It should be noted that Pepe anticipated the soft market through 1987 and 1988. Throughout 1987, Pepe sold various real estate holdings to accumulate cash for the anticipated downturn. In late 1987, Pepe maintained cash reserves of approximately $1.5 million only to see the reserve evaporate into Shore Buick in the winter and spring of 1988.

An additional major cause of the Group's current situation is a classic and inevitable problem which affects every business which experiences rapid growth, i.e., finding experienced and qualified personnel. Expansion stretched the quality of upper-level management to the breaking point.

The Pepe Group prospered during the early eighties with managers who started at T & R Lincoln-Mercury and moved with Richard T. Pepe to Pepe Chevrolet-Buick. As the Group expanded, the managers who led the growth moved to the newly acquired dealerships. Inevitably, additional employees were promoted to management positions and others hired who were not Pepe caliber managers.

Consequently, in the past 18 months, those managers negotiated many bad deals, which eventually had to be bought back by the dealerships, and they maintained poor and excessive inventories whose wholesale interest charges then drained dealership cash and until recently (they) have been saddled with last-year-model units.

Dealership managers have also permitted retail financial institutions into the dealerships. When Richard T. Pepe purchased Pepe Chevrolet-Buick in 1980, GMAC and five banks were writing Retail Installment Sales Agreements. Pepe permitted only GMAC to remain in the dealership. Thereafter, while some dealership retail paper was questionable, there was sufficient quality paper to justify the occasional poor risks.

As managers diversified with other financial institutions, those new market players received some of the quality paper and GMAC re-evaluated the Group's loss ratios and thereafter GMAC tightened its credit policies due to the lost (sic) ratios.

As sales volume lagged, inexperienced managers gave poor risks to GMAC, which eventually were charged back to the Pepe dealerships. Also, with many wholesale paper players, it was relatively simplistic for the Group to borrow funds, which led to undercapitalized corporations and the current out-of-trust problem.

GM's first-time-buyer's plan has severely hurt the Group. The Group paid commissions following increased sales and experienced large dealership chargebacks. Unfortunately, money made was money spent, which led to a deterioration in the dealership's cash flow. Similarly, GM, Chrysler and Lincoln-Mercury rebate program adversely affected the dealership's liquidity

FINANCES

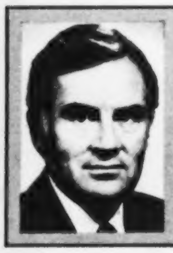
FROM PAGE 216

ence, it is a real plus for getting another franchise."

Factories optimistic

Even though there is growing evidence that dealers are having more financial problems, factory officials are still optimistic about the financial health of their dealers.

"I would say that the profitability of our dealers has been good in recent years," said Robert O'Connell, GM executive vice president. "I think that it has gotten to be a more complex world for our dealers. One of the factors has been the multiple franchises that they have taken on and the leading factor, as I see it, is how they sort out that franchise routine.



McCarthy: "If sales head downward, I think you will hear a lot more about dealer debt."

"But I think the profitability level of GM dealers has been strong.

"There is a sense of cautious optimism in our dealerships about the product lines that we have coming out in the next couple of years. I think that there is going to be a very strong profit opportunity with the GM division franchises," he said.

Richard Fenstermacher, general sales manager of Ford Division, said he can think of only two big Ford stores that went bankrupt last year, about the same number as in any normal year.

Fenstermacher said both failed for reasons not related directly to the dealerships.

"The dealerships got big and successful and began to get involved in other ventures," Fenstermacher said. "You can only manage so much."

He remained optimistic. "With the business as good as it's been, there shouldn't be any causes for anything (going sour) if the store is well managed," he said.

To no one's surprise, an expanding economy and healthy gains in sales have helped keep Ford dealers out of trouble in recent years.

"Our trend of dealers who have some financial problems basically has been declining for the last four or five years," said Bob Missel, manager of dealer financial services for Ford Motor Credit Co.

One barometer of dealer health is the number of what Ford calls "status" dealers — those who aren't living up to their financial obligations to Ford Credit. About 74 percent of Ford and Lincoln-Mercury dealers floorplan through the automaker's finance arm, Missel said.

There are currently about 300 status dealers on the books, Missel said. And there are more in three economically depressed states — Texas, Oklahoma and Louisiana — than in the rest of the country combined. A third are Ford New Holland tractor dealers.

During the difficult early 1980s, Ford had as many as 700 dealers in status condition. At that time, Ford Credit was serving fewer dealers than it does today, about 68 percent of Ford and L-M outlets.

Fewer than 10 dealers nationally filed for bankruptcy last year, Ford Credit officials said.

The company has 5,600 Ford and Lincoln-Mercury dealers and 2,000 New Holland tractor dealers.

Missel sees some patterns among troubled dealerships. Problems can develop when a dealer diverts funds from the car business into another venture that goes sour. Another common cause of problems is absentee ownership.

Missel said the trend toward megadealerships is creating some new challenges for Ford Credit. The company is studying the financial control processes that are unique to megadealers so Ford Credit can respond effectively if trouble develops.

"In the process of the study, we're saying that megadealers are generally very good managers," Missel said. They tend to be effective developers of management talent, they provide strong financial control and they operate their stores uniformly, he said.

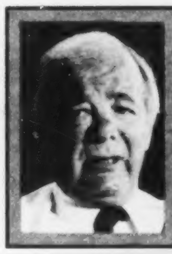
Neither General Motors Acceptance Corp. nor Chrysler Financial Corp. would say how many of their dealers are having enough financial difficulty to warrant their equivalents of "status" assistance. The two factory finance arms also would not disclose how many of their dealers filed for bankruptcy last year and how many were sued for being out of trust.

But Bennett E. Bidwell, chairman of Chrysler Motors, said that at the start of the 1989 model year profits per dealer in the Chrysler-Plymouth and Dodge franchises were up 40 to 50 percent from previous-year levels.

"Jeep-Eagle dealers have been profitable as well," he said. "The financial health of our retail distribution network is as good or better than it has ever been."

Even so, most factories may not see enough of their dealers' financial information to accurately monitor them, particularly if the dealer has a holding company and a variety of franchises.

"One of the problems we have is that we see a financial statement for our store, but what does it really tell us about the rest of the company," said Edward R. Carbin, GM's director of dealer relations.



Bidwell: "The financial health of our dealers is as good or better than it has ever been."

"If a dealer has separate holding companies for his businesses, we don't know the financial health of his overall operations," Carbin said. "In the event creditors come calling on our dealers, there is no way to keep our store out of bankruptcy proceedings."

He said, "GM is very concerned about dealer indebtedness; especially some of the larger chains. Some of these businesses are highly leveraged. I wonder if (dealer) egos have become involved in running the business and they have taken on more than they can handle. Everybody wants to be in the top 10."

Carbin said GM has consulting teams that help dealers with their financial needs and those teams have been busy.

Financial details lacking

Financial experts contend that dealer accountants should be able to produce financial statements that accurately reflect the financial condition of the business — for the dealer's internal use as well as for the use of factories and lenders.

However, some dealerships fail to produce accurate statements because dealership personnel don't provide all necessary information to the certified public accountant, who will rely on it if he isn't closely monitoring operations, said John E. Fox Jr., of the CPA firm Tonks and Friend in Manasquan, N.J.

"One problem is that too many dealers have automotive controllers without a good accounting background," Fox said. "They do financial statements that are garbage, just putting number together, just a review that's reasonably correct.

"I've seen dealers do things to make the accountant think he's got correct information and he doesn't," he said.

"For instance, a manufacturer owes this dealer thousands of dollars in warranties — but the claims may be obsolete." That means they should be written off the books, which could significantly change the balance sheet by eliminating receivables listed as assets.

Even though accountants claim that many dealership financial statements do accurately depict the condition of the business — that things frequently are worse than they seem — there is cause for concern based on how things seem to be.

The most recent NADA dealership profile data for the first 10 months of 1988 shows an average debt to equity ratio of 2.52 to 1 — meaning the average dealer has 2½ times as much debt on the books, including the floorplan, as he has actual equity or net worth in the business.

The NADA data also shows a current ratio of 1.37 to 1, that is for every dollar in current liabilities, the dealer's balance sheet shows $1.37 in current assets. Although that seems reasonable, liquid and safe, elimination of current receivables — such as for writeoff of uncollectible or "obsolete" warranty claims — or an increase in factory chargebacks on the liabilities side could bring the current ratio, which measures liquidity, perilously close to insolvency.

The NADA data also shows that through October, the average dealership had a parts and service absorption rate of 53.04 percent, which means that parts and service were covering only slightly more than half of the dealership's monthly fixed costs and expenses.

Charles Lacey, director of domestic operations for the multi-franchise megadealer chain Hendrick Management Corp., said such absorption rates are a viable measure and that all Hendrick stores are expected to maintain an absorption rate in the 60 to 65 percent range.

Robert Snodgrass, former dealership consultant was even more succinct. He is a Mercedes-Benz, Audi and Porsche dealer in Jacksonville, Fla., and a Porsche-Audi dealer in Atlanta.

"Any dealer that is running under 65 percent is in trouble," Snodgrass said. "That's the largest red flag."

And the problems don't stop there.

One dealer consultant who sees the books of hundreds of dealers of varying size nationwide — but requested anonymity — said some dealers are filing "bogus" financial statements to intentionally mislead factories, lenders and prospective buyers.

The consultant said that generally, factories and lending institutions — and even some prospective buyers — are unable to see the holes when a dealer has done such book-cooking.

"A lot of the dealers we work with are substantial dealers and substantial citizens in their community," the consultant said. "They were doing very well two to three years ago, but now they are not doing well at all.

"There are hundreds of dealerships for sale everywhere. It's like a chess game. Anything is for sale.

"There are hundreds, maybe thousands, of dealers out there who would sell their business today, but wouldn't have dreamed

see FINANCES, page 220

PEPE

FROM PAGE 216

position and GMAC's tight buying policy has hurt the Group's ability to move units and increase sales.

The new dealership buildings of Pepe Toyota and Pepe Lincoln-Mercury, while superb edifices, have been tremendous cash drains on the organization. The construction commenced in the fall of 1986, and thereafter monthly interest payments eventually equaling $50,000 per month were due, along with architectural fees and other associated costs.

This was a one-way stream of cash out of the organization that severely drained the Group's working capital. The buildings continue to be a drain on the entire Group and neither Pepe Toyota nor Pepe Lincoln-Mercury has turned a profit since occupying the buildings in the summer of 1987.

The buildings were designed with the view toward adding additional franchises to support the cost of the structures. The Porsche, Alfa Romeo, Volkswagen and Audi franchises were purchased with the view toward moving them to the new buildings. Brisk sales volume in the first month following the franchise purchase caused Pepe to leave the dealerships in West Atlantic City. This tangent from corporate policy left Pepe Toyota and Pepe Lincoln-Mercury alone to bear the entire expense of the buildings.

Toyota Motor Sales Co. (sic) promised an increased allotment of units following occupation of the building; to date, Toyota has not supplied the units.

Similarly, Pepe Oldsmobile-Pontiac-GMC Truck was purchased with the intent of moving it into the new Toyota building. General Motors Corp.'s approval was initially sought in the winter of 1988. The move meets all of the requirements of each division involved and the highest ranking General Motors zone managers assured Pepe the move would be approved perfunctorily. To date, even though each Philadelphia Zone Division (sic) has approved the move, Detroit has yet to act.

In reliance on the assertions of General Motors' zone managers, Pepe Oldsmobile-Pontiac-GMC Truck secured a $6 million inventory in anticipation of the move. With General Motors' omission, the dealership is saddled with a $6 million inventory instead of the $2 million it should possess at its present location. Increased wholesale interest on excessive inventory has further drained the dealership of working capital and cash.

As a result of two manufacturers' omissions, the Pepe Group has two dealerships which have not secured a profit since the summer of 1987.

Government entities have also hurt the automobile group. The New Jersey Department of Environmental Protection, acting on a tip that a rare tree might be located where the Pepe Toyota and Pepe Lincoln-Mercury dealerships were to be built, held up construction of an ultra-modern body shop for six months. Only expensive litigation forced the Department of Environmental Protection to withdraw from the case. The tree was located in an undisturbed area of the property.

Similarly, the Department of Environmental Protection forced USA Auto Brokers, a Pepe automobile reconditioning center, to stop washing cars for several weeks and to perform environmental tests on the property because of a minor problem that existed at the facility since its construction in the 1960s by an unrelated owner. A local municipality is also presently holding up the construction of improvements to Pepe Imports preventing the Volkswagen franchise to operate profitably at the location.

The New Jersey Department of Consumer Affairs has also filed a suit against Pepe Buick-Oldsmobile-Cadillac and Shore Buick seeking unrealistic fines of $324,000 for an alleged minor advertising violation. The dealerships' advertisement referred to the manufacturer's factory invoice in an ad. This type of advertising is utilized throughout the country; however, the New Jersey Department of Consumer Affairs objected.

Pepe's lawyer advises that they (sic) will prevail on the merits of the case or consent to a de minimus fine. However, the local press sensationalizes the astronomical and unrealistic fines. This has hurt sales and has needlessly alarmed the Group's financial suppliers.

In conclusion, the Group's rapid expansion with undercapitalized corporations and the soft automobile market exacerbated by outside factors beyond the Group's control and internal factors such as weak management and lax financial controls led to the evaporation of working capital and the current "sold-out-of-trust" dilemma.

The Pepe Group's strength has been its speed in adapting to market forces. Without sufficient working capital, the Group has been forced on the defensive instead of its usual aggressive track. The dealerships have been unable to take advantage of discounts and the current out-of-trust problem has led to large floorplan interest changes.

In short, a small snowball started down a hill and has steadily gained speed and size.

It is the firm belief of Richard T. and Virginia I. Pepe that the snowball has now hit the bottom of the hill and shall melt.

Some dealers sense warning signs of trouble on horizon

There are certain areas of the United States that generally serve as early-warning listening posts for changes in automobile retailing.

As of last week, dealers in some parts of the country had yet to see or feel any evidence of a coming shakeout. However, dealers in other parts of the country say they already have felt the tremors.

Some key areas, like California, seem to be getting mixed readings.

Dick Ritchings, Pacific Palisades, Calif., a certified public account and dealership consultant, said car sales are flat but truck sales are up. Ritchings said that of the four 20 Groups he moderates in California, one is Chevrolet megadealers who are very healthy.

"They're all making money," Ritchings said. "Ford is probably doing better than Chevrolet. We have Ford dealers in California that are making unbelievable money."

However, there are "concerns about the overall operations with some of the smaller operations," he said.

"Some of the lesser-known import stores are having difficulties," he said. "I'm aware that some of them are stretched out capitalwise." In that group he included some Nissan, Sterling and Hyundai stores.

"Major portions of the West Coast are in bad shape," said another dealer consultant, who spoke on condition of anonymity. "There are dealers everywhere," he said, blaming factory "overdealering" policies.

"A Nissan store on the West Coast that used to average $1,800 (gross profit) per unit (in 1984-1986) now is lucky to do $800 to $900 on less units even though the fixed overhead costs are the same," the consultant said.

Edward R. Pasini, audit engagement partner at Peat Marwick Main & Co., Los Angeles, said he believes there will be a severe market slowdown in southern California in the next 18 to 24 months.

"Some deals that are overextended will be sold because they have to be sold," Pasini said. "Already, southern California Toyota franchises are going begging."

Yet others view California as one of the places to buy.

"We would like to expand in the South, Southeast, West and Southwest," said Charles Lacey, director of domestic operations for Hendrick Management, a megadealer organization. He also is a former Chevrolet zone manager.

"We think we understand the market. We would look at anything. We prefer a new store but we would look at any store. Yes, we have bought two or three failed stores."

In the Rocky Mountain area, the key Denver market has been unsettled.

"There have been many more sales of dealerships than in years past," said William D. Barrow, president of the Colorado Automobile Dealers Association. "Denver's economy has been down for the last three years because it is dependent on agriculture, mining and oil. The oil belt has been hurt.

"Individually held stores in growth markets are doing fine. A megadealer will hire a general manager to run a store. In the down times, a megadealer will lose both money and management," said Barrow.

It happened in Denver to two dealers, he said. "Both are out of business . . . and there is another dealer equally as large who has been backing out of the business for the last two years."

The Southwest seems to have missed the early tremors. "I'm not aware of any megadealers who are having trouble," said Raymond E. Berube Jr., New Mexico Automotive Dealers Association president.

However, a little further east, in oil country, there have been a number of failures and even more dealers having tough times. Ford Motor Credit Co. said the highest concentration of its dealers who are receiving financial guidance are in "three economically depressed states: Texas, Oklahoma and Louisiana."

A Texas GM dealer said that dealers there are cash short, in part, because the automaker is slow to pay dealers the money owed to them on incentive programs.

"GMAC wants its money right away but the divisions take weeks to pay what they owe us," he said.

Like California, conditions in key Midwest states have been good as well as bad, but metropolitan markets generally have had no tremors.

"Some small dealers in rural areas are getting out," said Peter Sander, Illinois New Car/Truck Dealers Association president.

"In the last couple of years we have seen a trend of dealers purchasing dealers in the rural areas," Sander said. "Where there used to be four or five dealerships in one town, now there are two dealerships with all of the franchises."

Jerry Cizek, executive vice president, Chicago Automobile Trade Association, said that although megadealers have a greater probability of failing because of debt load, there haven't been any failures in Chicago.

"There have been more dealerships sold and more acquisitions across the board, however," he said. "Dealers buying dealers has picked up over the last six months — this seems to be the trend."

Michigan dealers are doing well, said Chester L. Swanson, Chet Swanson Sales, Traverse City, Mich. Swanson, a Cadillac-Jeep-Subaru-Oldsmobile dealer and NADA director from Michigan, said, "From all I hear, Ford and Chrysler seem to be well off. The same people tell me that GM is not as well off, but from the GM point of view, things have been well for me, and seeing what they have to offer next year it will be better."

Jim Bayson, partner in charge of auto dealerships, Plante & Moran, a certified public accounting firm in Southfield, Mich., said Detroit-area dealers that survived the 1981-82 shakeout are still around and are in good shape.

"They are dealers that know what their costs are and know what's going on in all parts of their operation," Bayson said. "The ones that didn't went out of business."

He said the surviving dealers are in good shape, "although — with some exceptions — business isn't anywhere near as good as it was three years ago, because of increased competition. "For most of them business is down; they are not making the kind of money they would have made three years ago."

Business is worse in the nation's midsection, such as in southern Ohio and Kentucky, according to one Chrysler dealer who is active in dealer associations.

He said 50 percent of the dealers in his region had red-ink months in September, October and November. "Of the 20 dealers in this area, about half are red and some are pink," the dealer said. Interest rates, floorplanning costs, and dealership labor costs are escalating dealer expenses.

"Nobody is up — nobody," he said. The dealer estimated business is down an average 15 to 20 percent. He blamed the higher cost of vehicles, 60-month loans and increased competition.

In nearby Pennsylvania there have been problems, said Margaret Stuski, Pennsylvania Automotive Association staff attorney.

"A couple of dealers expanded too fast. They were good dealers and not very good managers," she said.

"We have seen an increase in the number of sales of dealerships. It has been as high as three per week and for Pennsylvania that's a lot."

In the important Northeast market, there have been some well-publicized failures and rumors that some other big megadealers may be in serious trouble.

One problem in the greater New York City area is skyrocketing increases in real estate costs, according to the Greater New York Automobile Dealers Association.

The key markets in the old South — like the booming Atlanta market — seem reasonably strong and healthy. However, even in some of the coastal resort towns there has been an evaporation of blue sky, so the region has not been tremor-free.

In Florida, again, there are different readings.

"We're seeing more sales of dealerships but don't know why," said David Jeffries, executive vice president of the Florida Automobile Dealers Association.

"It could be a good opportunity to get rid of a dealership at an attractive price," Jeffries said. "We are seeing a trend towards more multiple-ownership. Some of it has to be because some dealers are having financial difficulties but that's an area the association doesn't get into."

Richard Baker, executive vice president of the South Florida Auto and Truck Dealer Association, said south Florida has been unscathed by dealership losses.

"The last store I remember going out of business was in 1982 and he was located in downtown Miami," Baker said.

"There have been dealers bought and sold in Florida but most of them are because of retirements," Baker said.

Baker said Florida has been protected from overdealering because of its Relevant Market Area Law, which allows dealers to protest the establishment of a new location. The law says that metropolitan dealers have a right to protest a new point going up within 12.5 miles of his store and rural dealers have a right to protest a new location going up 20 miles from his store. Baker said 36 states have a similar law.

FINANCES

FROM PAGE 218

of it five years ago, just to get out from the pressure.

"The quality of life of the dealer is the worst I've seen in 20 years."

The willingness of dealers to get out of the business and the willingness of others dealers — generally established megadealers — to buy has created the accelerated market.

Too much blue sky

One key element of the shakeout is what has been happening to the price of dealerships, particularly the intangible "blue sky" or "goodwill" elements of a sale price that represent net profit above the value of the assets.

For example, a manager of a Virginia Chevrolet dealership, part of a group of dealerships, said his group looked at buying an import dealership in a desirable Southeastern resort community.

The dealer was asking for no blue sky for the dealership. Two years ago, the same dealer would have been asking "big blue sky," the manager said.

There is a clear school of thought that believes dealership prices generally are going to tumble in 1989 and 1990. Ferron of J.D. Power and Associates is one of the proponents, as is John B. T. Campbell, president of Campbell Automotive Group, the first publicly held dealership group in the United States.

Edward R. Pasini, audit engagement partner at CPA firm Peat Marwick Main & Co. in Los Angeles, also sees a shift in the buy-sell business.

"A lot of megadealers were created driven by ego, buying quantity vs. quality and because after hard times, they were cheap," Pasini said. "Now things have changed, the bargains are gone and dealers are passing up high-buck buyouts in the belief that within two years the going price will drop considerably."

Although many experts say that blue sky already has started to decline in many areas and for many franchises as part of the early stages of the impending shakeout, the ultimate decline in average blue sky could become much steeper as both a cause and effect of the shakeout.

Veteran dealership broker Jack Hamel of Sarasota, Fla., was blunt in an interview late last year. He said that a major problem has been that dealers have paid "too damn much" for stores.

"When they are paying six times earnings, they are out of their minds," Hamel said. "If a dealer has a bad month or two, they can't service their debt. They are out of business."

Robert E. Johnson, president of New York-based York Associates Consulting Corp., said, "There will be a lot of dealer casualties next year and franchise casualties. Some (of the franchise casualties) will be Japanese."

Johnson is the former executive vice president of Lex Service, the British dealership chain that purchased 50 percent of Campbell Automotive Group in California.

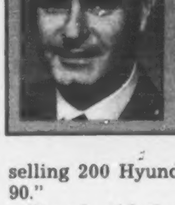
Hamel, like Johnson, predicted dealership and franchise failures in 1989.

"There are going to be franchise casualties," he said. "There are more damn Acura deals for sale than you can shake a stick at. They are not publicly for sale, but if you will pay them what they have in the deal, you can have it. We are going to be very busy next year buying and selling dealerships."

Dick Ritchings, Pacific Palisades, Calif., dealer consultant who assists with buying and selling, cited Hyundai as a franchise that is proving to be too expensive.

"They are asking for particular investment in land and buildings; sometimes heavy — $2 million to $2.5 million. It's very difficult to get a return on that kind of car," he said.

He said Hyundai started off nicely and was successful because it did not overpopulate, but that has changed. "They have overpopulated here and in the East," Ritchings said. "People who were selling 200 Hyundais are selling 90."



Carbin: "GM is very concerned about dealer indebtedness; especially some of the larger chains."

Hamel said the problem with Acura is the huge initial investment required.

"The dealers don't have the sales volume or the service business to justify the debt," Hamel said. "In time, Acura may be a good buy, but right now a lot of dealers are losing money."

Against that backdrop, Hamel just laughed when asked whether Saturn, Lexus and Infiniti were being launched in a difficult climate.

GM's Carbin admitted that the debt problems facing car dealers make this a particularly risky time to launch GM's new Saturn franchise.

"You've already seen several dealers decide they could not afford Saturn," he said. "I think Lexus and Infiniti face a similar future. Not because they are unattractive, but because dealers can't afford them."

Accountant Fox of Tonks and Friend agreed that dealers have been paying too much blue sky, which has added to amounts borrowed to finance dealership purchases, and therefore also has increased the debt load and monthly debt service payments. "That's air," he said, "and sometimes an excessive amount."

Rick Caille, director of dealer development for Hyundai Motor America, acknowledged problems Hyundai dealers are having, including average per-dealer sales that declined during the 1988 model year.

But Caille said his biggest shock was personally seeing the "very

see FINANCES, page 222

FINANCES

FROM PAGE 220

poor" quality of credit-worthiness of buyers that were being approved by financial institutions across the board.

"I couldn't believe the deals they were approving," Caille said.

Caille's disbelief has been shared by other factory officials and by the lenders themselves, who have seen losses climb on so-called marginal paper.

Those losses, spurred by more repossessions, have triggered some major changes.

Lenders changing

In recent months higher interest rates, tighter credit standards by factory finance arms such as Ford Credit and GMAC and a cyclical abandonment of the automobile market by some local banks and the move to marketing their own, direct car loans by other banks have forced dealers to seek finance sources beyond those they traditionally have relied upon.

Hence the move to non-traditional buyers of lower-quality paper standards, like the so-called "turndown" finance companies that buy contracts that are funded by independent investors.

One former banker who is now a consultant in the retail automotive sector believes that the changing relationship between dealers and their lenders will be a primary cause of the shakeout, which he calls a "a revolution in retail distribution."

He said major banks are losing their interest in dealers because of the high costs of obtaining dealer business and the fickleness of the relationship.

The former banker said that over the last few years, dealers have had the upper hand with banks by negotiating low rates for commercial needs like floorplanning, capital infusion and real estate loans, while using their influence "like a shotgun" to get the financial institution to buy the retail paper, including marginal contracts.

Now, he said, the depth of marginal paper has turned very bad with heavy losses for the lenders.

"As much as 5 percent of and maybe more of new-car loans should have never been sold," the former banker said. "They were sold and financed on the knowledge that the consumer was not able to pay for it."

He said at least another 5 percent were "oversold;" that, is the contracts "were padded with high-cost service agreements and everything else that could be thrown in."

He said extended terms also hurt because buyers had to extend their normal buying cycles because they didn't have enough equity in trade-ins to support a strong down payment on a new car.

"All of these sales habits that have taken place over the last few years are coming home to roost," he said.

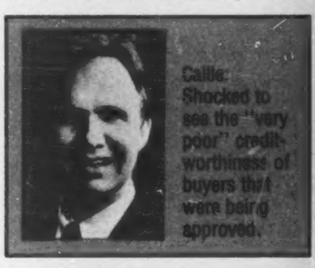
The result is that banks are looking for loans with lower loss ratios, making financing less available from traditional sources.

Many of the non-traditional lenders attract dealer business by promising non-recourse paper — for which the dealer has no responsibility in a default or repossession — as well as additional income from a fat finance profit and sale of hard and soft add-ons.

Fox of Tonks and Friend said that a large number of repos will hurt a dealer, even if non-recourse paper is involved. "You're on the paper no matter what," he said. That's because high repos eat into a dealer's financial reserves and may make it hard for him to maintain even the minimum 1 percent required by a bank. To make matters worse, a bank might raise that amount to, say, 3 or 5 percent, Fox said.

That would be especially tough on megadealers, "who might have $40 million out (in financing) and have to hold $2 million in reserve for 5 percent." To avoid the bank increasing the minimum reserve, a dealer will negotiate with the bank to handle the repos himself, by selling them as used cars, Fox said.

Harold G. DeValk, of Chicago-based DeValk Associates, a CPA firm, said he believes that some dealerships do get into trouble by doing business with banks that do not understand the automobile business.



Caille: Shocked to see the "very poor" credit-worthiness of buyers that were being approved.

"When banks jump in, they tend to do so pretty ignorantly," he said. "They decide they want to invade the market, then they jump out. It happens a lot. They do economic studies, decide to change their mix of loans, and if a dealer is not doing well, he may not be able to replace the floorplanning.

"Banks get in a lot deeper than they even sense that they are. They get way overextended before they pull the floor," DeValk said.

"As a general rule, a dealer should be cautious using banks, because they tend to run hot and cold," he said, "and banks are probably biased against floorplanning, because of the high costs of servicing, financing and checking inventory against the low rate of return."

Joe Moran, vice president of Comerica Bank, Detroit, and manager of dealer commercial services, said his bank's strategy has been to focus on what it considers the upper end of the market and not try to be all things to all dealers.

Comerica has dealer commercial services offices in Los Angeles, San Francisco, Dallas, Denver, Detroit and Florida to service 120 dealers.

"We focus on what we think of as the epitome of the middle-market business — sales a bit higher than U.S. average, and run by well-experienced, capable managers," Moran said.

He said Comerica looks at an auto dealer as it looks at any other middle-market business: It evaluates by net worth, profitable track

Turn A Quick Change Into Big Change.

Rotary
ROTARY LIFTS

Any service bay becomes a complete lube and service center with Rotary's new Quick Lube Lift.

It's a quick and easy way to enter the profitable quick lube market. No adding bays. No digging pits.

And only Rotary gives you a choice for expanding: convert your present inground lift, or install a complete lift package (4-post or inground). Either way, you'll get top quality construction, easy on and off drive ramps, and a specially designed walk-around platform for easy access.

So if you're looking to expand your operations, look to the Quick Lube Lift. The change will do you good.

To find out more, contact your local Rotary dealer or call Mike Jobe or John Bran toll-free 1-800-445-5438 (in area code 901, 1-345-2900). Or write to: Rotary Lift, P.O. Box 30205, Airport Station, Memphis, TN 38130. Lease/purchase options are available.

record, working capital, expense management and other financial measures.

He said successful dealerships use cost structures set up on a variable basis rather than fixed basis, to allow adjustment for downturns and reduction of overhead. Even employees are compensated on percentage of growth rather than flat salary, Moran said.

House of cards

Snodgrass sees the recent failure of dealerships around the country as a result of too many nameplates for the current number of car buyers.

"In the current climate of business, which includes many dealers that are multi-franchise, when the climate of business is not so good, the trickle-down effect really hurts all the dealerships," said Snodgrass.

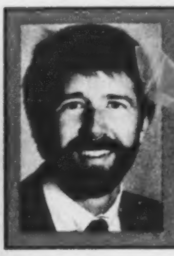
According to Snodgrass, the big shakeout will occur with medium sized multi-franchise companies, which he described as a "house of cards." Like a house built with cards, dealerships in a medium-sized, multi-store operation are dependent on each other. If two stores out of a five-store organization fail, the entire organization can easily fall.

"The two failing dealerships are relying on the three healthy ones, those dealerships are not healthy enough to support two other stores," said Snodgrass.

"These (medium-sized multi-franchise dealers) are generally the most leveraged. A dealership with long or substantial current debt will find that continued existence from a cash flow management standpoint is virtually impossible."

CPA Fox said that most dealers get in trouble because of their fiscal policy, and that high-priced computer systems — sometimes required by the factory — are not helping.

"Computers should help give them greater control over fiscal policy, but a lot of dealers get misinformation from the machines," Fox said. "Some dealers are very good salesmen but they don't know what it costs to turn the key in the lock in the door in the morning."



Campbell's managers are not from traditional sources. "Half my general managers have no sales experience."

Fox said a dealer may spend $150,000 to $250,000 for a computer and only use $10,000 of it because he hasn't been trained properly — maybe only two or three days — and may be getting inaccurate information on inventory and floorplanning from the computer.

Another dealer consultant said that instead of reducing dealership personnel, computers also force dealers to hire more personnel — computer experts — at $30,000 to $40,000 a pop.

"The economies of scale argument is almost a facade," he said. "The time that is required to deal with a particular franchise and all of the elements that go with a franchise are consuming among themselves.

"You lose the economies of scale after two dealerships."

More than ever, there is discussion about varying management philosophies and the management practices required to build and profitably maintain a megadealer organization.

Manager shortage

One of the factors made clear by dealers, consultants and accountants is the shortage of real managers.

"It's a big problem," said the manager of a group-owned Chevrolet dealership, echoing what many other dealers said. "There are not enough good, experienced managers to run the dealerships — managers who can see the holes in the operations."

He said his dealership group has three headhunters searching for dealership managers, and so far, none have come with a price tag under $100,000."

Dealers and consultants also make it clear that without good managers at every location, a megadealer chain will collapse. As much as capital, a dealer needs a good management team to expand.

More and more, megadealers are moving toward the old-fashioned concept that an owner should be on the premises. That ultimate in on-site management philosophy is the one used by Victor Potamkin and and his sons Robert and Alan to control 50 franchises in 20 locations.

The Potamkins grow by allowing their managers to become minority investor partners with responsibility for their respective dealerships.

"We find that the owner/operator, being on the premises, knows that location far better than a bureaucrat who may be at a different location," Alan Potamkin said. "The bureaucrat is likely to mortgage your future for the sake of short-term gains."

Campbell, president of Campbell Automotive Group, said he goes outside traditional sources to recruit managers, sometimes even outside the automotive business. "Half my general managers have no sales experience," Campbell said.

A dealer consultant with 300 dealer clients said the current megadealer theory is that if an organization is not growing, it is dying and there can be no status quo.

"To grow, the dealer has to speculate," the consultant said. "He attempts to attempt to improve by growing bigger, thinking bigger is better.

"He gets in an aggressive acquisition stage — adds more computers, more personnel, more used cars, more investment.

"A new dealership is usually located in a high-rent district, adding tremendous fixed cost. Invariably what happens is the dealer's first store drops without him there. He tries to be too many things to everybody. And the dealer now, instead of having one store doing well, has two mediocre stores."

The consultant used the example of a Southern dealer who ran a successful Chevrolet dealership, then added Hyundai, then branched out to other cities.

Potamkin: "The bureaucrat is likely to mortgage your future for the sake of short-term gains."

"The last time I saw him he had the shakes so bad he hardly made sense," the consultant said. "His original store deteriorated and instead of one doing well, he had 6 or 7 doing poorly.

"If you grow too quickly without enough managers, you lose the involvement of the entrepreneur-owner, who is truly the only one who gives a crap because he's the only with the big bucks in it."

Myth of the megadealer

All of this comprises "the myth of the megadealer," according to one consultant, who believes the news media are responsible for over-glorifying it.

Too many megadealers are undercapitalized and too highly leveraged with marginally performing dealerships run by inefficient managers, the consultant claims. They have gobbled up franchises — sometimes paying exorbitant blue sky — and financing them with very expensive debt or capital that could be earning a greater return in another business.

The result is that in addition to the normal economic and financial pressures on a dealership, the perceived need to make an organization grow to comply with the myth has created additional problems for megadealers.

Those megadealer problems — coupled with normal pressures — are what will accelerate franchise consolidation and the shakeout, according to many dealers and consultants.

"Starting in 1989 through the next 12 to 15 to 18 months, we will see as much as a 15 percent mortality rate in the existing dealer body . . . a changing of the guard," said Robert Monteith of Robert Monteith & Associates, Phoenix, Ariz.

"That includes the dealers who go broke and the dealers forced to sell off or cancel some existing franchises."

He said there will be the voluntary reasons, like a dealer who is 62 years old and doesn't want to go through a downturn again, so he just sells.

"There also are going to be those dealerships that are really leveraged through financial commitments and the tremendous blue sky paid for dealerships a couple years ago," said Monteith, a consultant to multi-franchise dealers, who also advises on the development of auto malls.

"A reduction of cash flow through sales along with the demands on that leverage will force some of them to consolidate and sell off some of franchises," he said.

He added that some of the good business managers will weather the consolidation and bring the business into line to survive the cyclical swing.

"But there's that group that won't make it and will go under," he said. "That will speed up the consolidation of franchises," the consultant said.

Megadealers will be forced to analyze the profitability of each franchise in their portfolios and adjust the portfolio accordingly.

At that point, importers and manufacturers will be forced to reassess their own vulnerability to market share because of the shakeout and the resulting effects on their individual dealer group and distribution system, Monteith said.

Ultimately, he said, the shakeout and its aftershocks could alter traditional dealer relationships and could facilitate or even necessitate public ownership.

"Publicly owned dealers are just megadealers with better financing," said Campbell.

Whether the shakeout means megadealers will shed franchises or add franchises or swap franchises or just evolve into something even larger, the tremors have started. Most experts agree they won't go away anytime soon.

Acura rated tops in U.S. in dealer-satisfaction survey

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

AGOURA HILLS, Calif. — American Honda's Acura Division finished first in J.D. Power and Associates' 1988 ranking of automobile manufacturers that best satisfied their dealers.

Dealers were generally more satisfied with their manufacturers in 1988 than they were a year earlier; in the latest poll, more than half rated relations with the factory as excellent/good. Fewer dealers gave fair/poor marks to their manufacturers. The dealer satisfaction index average for the industry was 101 in 1988 and 99 in 1987.

As a group, Asian manufacturers ranked first, with a score of 107, one point higher than a year earlier. European automakers finished second with a score of 103, the same as in 1987, followed by the domestic manufacturers with a score of 98, two points higher than in 1987.

The Power organization found that 55 percent of the respondents rated their overall relationship with the factory as excellent to good, up from 50 percent in 1987. The number of dealers saying their relations are fair to poor declined to 42 percent in 1988, down from 47 percent a year earlier. Dealers giving don't know/no answer responses totaled 3 percent in both surveys.

Acura captured the top spot with a score of 124 points on the dealer satisfaction index in Power's 1988 Dealer Attitude Survey.

Acura's 1988 score of 124 was seven points higher than a year earlier, when Acura finished second to Hyundai. Acura's gain was attributed to increases in positive ratings on all four dealer satisfaction index factors. The division's marks improved on all but two of 13 major index components, Power said.

Range Rover placed second in 1988 with a score of 122, four points higher than its 1987 score. Range Rover dealers, according to Power, gave substantially more "very acceptable" ratings to the importer in 1988 than they did in 1987 on 10 of the 13 major components o the dealer satisfaction index.

Mercedes-Benz finished third in 1988, with a score of 118, seven points higher than its score in 1987. Higher scores on the business terms and sales support factors helped it gain, with more "very acceptable" ratings recorded on 10 of 13 components, Power said.

Its German rival, BMW, saw its score fall from an above-average 104 in 1987 to a below-average 100 in 1987.

Honda improved its score by four points to capture fourth place with a score of 114. More positive ratings on the business terms and service support factors helped Honda moved up from sixth in 1987. Honda dealers gave more "very acceptable" ratings in 1988 than in 1987 on 11 of 13 components, Power said.

Improvements on the service support and sales support factors helped offset losses on the business factor for Saab, to help the Swedish automaker maintain its score at 112 and tie with Audi for fifth place. Saab dealers gave more "very acceptable" scores on nine of the 13 components, with the largest gains in the areas of service support.

Audi boosted its 1988 dealer satisfaction index score seven points to 112. Audi dealers' "very acceptable" ratings on 11 of 13 components were higher in 1988 than in 1987.

Mazda, with 111 points, was seventh, down from fourth in 1987, as a result of lower ratings on sales support.

Hyundai scored 110 in the 1988 survey, nine points lower than in 1987, and dropped from first to eighth. All 13 components were rated lower than or the same as in 1987.

Daihatsu finished with an index score of 108 — 10 points lower than in 1987, although the 1987 score was probably not a good indicator because the franchise was so new, Power said. Daihatsu dealers gave more "very acceptable" ratings on seven of the 13 major components. Daihatsu tied with Toyota for ninth place.

Mitsubishi dropped to 11th place in 1988 with a score of 105 — 10 points lower than in 1987. The drop was attributed to less-favorable dealer ratings on all 13 components and lower scores on all four DSI factors, with the largest declines recorded in the business terms and service support factors.

Volvo's score of 103 dipped five points from 1987 when it finished ninth. Volvo dealers gave the automaker more "very acceptable" ratings on only two of the 13 components — prompt payment of warranty claims and the handling of customer complaints.

All the General Motors divisions increased their scores — and some significantly so — in part because of the new GM10 cars. Buick, Pontiac and Oldsmobile all rated the factory higher on sales and product factors.

Cadillac's 1988 dealer satisfaction index score of 102 rose five points. Its dealers gave more "very acceptable" ratings than the year before on 10 of 13 major components. The biggest gains were on service and sales factors, Power said.

Cadillac and Lincoln-Mercury tied Porsche for 14th place and were the highest ranked among the domestic makers.

Buick, Oldsmobile and GMC each increased their scores by five points, and Pontiac rose by four. Chevrolet's score rose by two points.

Among the makes that lost significant ground in 1988 were Suzuki, down 10 points; Yugo, down 11 points; and Sterling, which ended up at the bottom of the list, down 14. In 1987, Sterling was given a ranking of 97 by its dealers, although it was so new a franchise that Power warned that probably would change quickly. Typically, dealers are happy with brand-new franchises.

Some significant gains were made in 1988 by makes that nevertheless remained near the bottom of the satisfaction list: Jeep, up 10 points; Subaru, up six points; and Jaguar, up four.

The survey was developed to determine, through factor analysis of 31 manufacturer policies, those specific policies that most affect dealer appraisals of their factory relationship.

Analysis of the manufacturer policy ratings from the 1988 survey centered on four factors — business terms, manufacturer's service support, manufacturer's sales support and vehicle supply.

Vermont's dealers plan school for technicians

MONTPELIER, Vt. — The 208-member Vermont Automobile Dealers Association is looking at immediate and future shortages of skilled technicians in realistic terms.

In a first for the industry regionally, a 6,000-square-foot building is scheduled to be constructed in the spring on the grounds of Vermont Technical College in Randolph Center. It will provide training for technicians.

The Vermont Automobile Dealers Association is both planning and paying for the development, with more than $200,000 already raised in donations and pledges from members.

Marilyn Miller, executive director, disclosed that the association is allocating $100,000 up front and borrowing $250,000 from the town of Randolph. The association members will repay the town over a five-year period.

Jeff Staudinger, executive director of the Green Mountain Economic Development Corp., helped arrange the grant. He called the dealer association-Randolph venture a "really unique example of cooperation between town, college and an association of private businesses."

Miller indicated that manufacturers and suppliers will be asked to provide equipment and vehicles for the project.

Beginning in the fall of 1990, participants in the program will be able to earn an associate degree in automotive technology at Vermont Technical College.

Barbara Gutheil, who directs the college's Center for Business and Industry, said prospective participants must meet the same admission standards as students in other educational programs.

Miller added that, at the outset, the automotive technology program will have maximum enrollment of 30.

Crisis warnings fly

Oil shortage, greenhouse effect feared

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A new book warns that the auto industry must make more fuel efficient vehicles over the next decade to cope with the developing greenhouse effect and an expected oil shortage.

"The New Oil Crisis and Fuel Economy Technologies: Preparing the Light Transportation Industry for the 1990s," by Deborah L. Bleviss, says vehicles with larger engines emit carbon dioxide that causes global warming and serious climatic changes.

The less efficient vehicles also make the domestic industry particularly vulnerable to an energy shortage, Bleviss said, adding that U.S. makers lag behind imports in using energy-saving technologies.

Bleviss is a physicist who spent seven years with the Federation of American Scientists. She now heads the International Institute for Energy Conservation.

A major oil crisis by the year 2000 or so is a very real possibility, says Bleviss. Low oil prices during the 1980s stimulated greater fuel demand — 10 percent more from the industrialized countries of North America and Western Europe and nearly a 60 percent hike from Third World countries. At the same time, the United States suffered a sharp drop of more than half in its oil production.

Meanwhile, our dependence on OPEC has risen from 40 percent to 55 percent in about the last four years alone while OPEC itself is straining at 90-percent capacity.

Since the last oil crisis, Bleviss points out, the number of vehicles in the world has risen 60 percent to a record 530 million cars and light vehicles. Those in the West account for one-quarter of the petroleum used. Since the last oil shortage, various moves in Europe to reduce oil consumption in motor vehicles and corporate average fuel economy standards in the United States "succeeded beyond anyone's wildest dreams . . . ," Bleviss said.

But she believes that by the year 2000 fuel economy of the global fleet — 30 mpg for cars and just over 20 mpg for light trucks — will be no better than what was reached by the mid-1980s. This will occur, she projects, because of the sustained oil glut and low prices that have led the U.S. government to abandon its policy goals and let market forces work for the short term.

Producing more efficient light vehicles could slow the rate of global warming and lower the risk of another oil crisis, she says.

In addition, a fuel economy program would greatly reduce the U.S. trade deficit and make the domestic industry more nearly competitive with the Japanese and other Far East countries producing light vehicles.

Instead, over the protests of Chrysler Corp. and consumer and environmental groups, the Reagan administration rolled back fuel economy standards and told Congress it wants to eliminate CAFE altogether.

Congress ignored that request and passed an alternate fuel (mostly methanol) measure that could spur technology and provide some relief from CAFE standards.

She believes consideration should be given to the following:

- Volvo's LCP 2000 prototype, which uses an advanced diesel engine. It gets 81 mpg highway and 63 mpg city. This subcompact, completed in 1985, can reach 60 mph in 11 seconds.
- Detroit concept cars like General Motors' Saturn whose early prototype got 60 mpg highway and 45 mpg city (even though GM's planning goals have changed); Chrysler's Liberty whose early prototype reached 70 mpg highway and 46 mpg city; and the Ford Alpha, about which little is known.
- Toyota's "ultra lean burn" engine, which can improve fuel efficiency as much as 20 percent and was introduced in Europe in 1984 in the Toyota Carina.
- Isuzu's development of a ceramic diesel engine with the possibility of using waste energy to improve fuel economy.
- Toyota's Camry and Mitsubishi's Galant and their use of electronic controls to change transmission gearing and achieve a 10-percent economy improvement.
- Nissan's innovative use of a turbocharger, which varies size of the air intake nozzle with vehicle speed to improve engine efficiency.
- Subaru Justy and use of a continuously variable transmission.
- Toyota Starlet with a partial lean burn engine and a high 10:1 compression ratio.
- Polyair Maschinenbau GmbH (Austria) and its development of a tire made of liquid-injection-molded polyurethane.
- Honda and Ford for possible use of a stratified charge two-stroke engine.

In addition, Bleviss describes at some length such fuel efficient prototypes as: GM's TPC (two-passenger car) with aluminum body and engine offering 74 mpg highway and 61 mpg city; Ford's unnamed car with an advanced diesel engine that gets 92 mpg highway and 57 mpg city; VW's Auto 2000 that gets 71 mpg highway and 63 mpg city; VW's VW-E80 (similar to the Auto 2000) gets 99 mpg highway and 74 mpg city; and Renault's EVE with an advanced diesel engine and mileage of 81 mpg highway and 63 mpg city.

She also mentions Renault's Vesta 2, which uses lightweight material, is highly aerodynamic and gets 107 mpg highway and 78 mpg city; Peugeot's VERA, which uses an advanced diesel and improved aerodynamics to get 87 mpg highway and 55 mpg city;

Also, Peugeot's ECO-2000, which gets 77 mpg highway and 70 mpg city; and Toyota's AXV with an advanced diesel engine, continuously variable transmission, heavy use of plastics and aluminum, and improved aerodynamics to get 110 mpg highway and 89 mpg city.

Bleviss suggests revamping the Energy Department's research and development to emphasize medium-term goals such as energy storage systems and ceramic engines. Instead of having specific CAFE standards, she suggests Congress look into requiring percentage improvements.

But — however it is done — Bleviss says the goal should be 45 mpg for cars and 35 mpg for light trucks and vans within 10 years.

Stimulating automakers to sell fuel efficient cars is also needed, says Bleviss, but it will be the most difficult item since for the past eight years, they have been accustomed to getting relief from NHTSA.

Bleviss' book is available from Quorum Books, New York.

Trade deficit declines

Export gain brightens October auto tally

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive-trade deficit in passenger cars and light trucks for October improved 3.5 percent when compared with the year-earlier period.

The improvement was due to a 36.9 percent increase in export value for the month, although import value increased 2.61 percent.

October's drop in the automotive-trade deficit followed a month-earlier increase of 10.5 percent. The September increase was due to a surge in imports from Canada.

Comparing the 12-month period ended Oct. 31 with the year ended Oct. 31, 1987, the automotive-trade deficit dropped 4.9 percent.

As of October, the United States was running an annualized trade deficit in passenger cars and trucks of $43.477 billion, down $2.2 billion from a year earlier.

The annual total reflects a 4 percent decline in the number of vehicles imported to the United States. Exports jumped 23.7 percent during that time.

Trade numbers from the U.S. Commerce Department show a trade deficit for passenger cars and light trucks of $3.931 billion in October. Total car and truck exports had a value of $996.5 million during the month. Monthly car and truck imports were valued at $4.928 billion. The deficit for October 1987 was $4.075 billion.

Passenger-car exports totaled 66,255 with an estimated value of $817.1 million in October. Light-truck exports for the month were 16,098 vehicles with an estimated value of $179.4 million. Passenger-car exports were up 14.0 percent to Canada, 197.8 percent to Japan and 108.2 percent to nations lumped in the category of "other" by the Commerce Department. Passenger-car exports to those "other" countries totaled 13,955.

On the import side during October, Japan continued to show downturns in both the quantity and value of car shipments. The value of imported trucks from Japan increased for the month, although the number of vehicles fell.

Passenger-car shipments also declined from West Germany, United Kingdom, South Korea, Yugoslavia, France, Italy and Brazil. Shipments from "other" countries also declined for the month.

Canada, Sweden and Mexico all boosted shipments to the United States during October.

Total car and truck imports had a value of $4.928 billion in October, up 2.6 percent from $4.803 billion in October 1987. There were 472,405 finished vehicles imported to the United States in October 1988 vs.485,686 in October 1987.

That means the average value of automobiles shipped to the United States is increasing.

Imports of passenger cars reached 400,131 units for the month with a value of $4.317 billion. Light-truck imports were 72,274 units, with a value of $611.3 million. The value of imported trucks increased 57.5 percent in October and shipments increased 16.4 percent. The increase was due to a 24.6 percent rise in shipments from Canada.

Japanese-car imports dropped 6.9 percent for the month and the value of the shipments fell 2.6 percent. Japanese-truck imports were off 7.9 percent and their value was up 11.7 percent. Japan shipped 216,155 cars to the United States in October, down from 232,054 a year earlier. Truck shipments were 45,569 units, down from 49,447.

Canada had a 24.6 percent increase in car shipments during October, sending 101,543 to the United States for the month. Sweden shipped 8.1 percent more cars in October 1988 than in October 1987. Sweden's shipments were down for the year, however.

Mexico shipped 15,113 cars to the United States in October 1988, six more than in 1987.

Brazil did not ship a single passenger car to the United States in October. In October 1987, Brazil's total was 8,454.

After showing some improvement, shipments from South Korea again turned down in October, falling 19.9 percent. South Korean shipments are up 27.1 percent on an annualized basis.

Yugoslavian imports fell 81.7 percent for the month. Italian shipments were off 74.1 percent, and French passenger-car imports fell 55.8 percent. Imports from the United Kingdom were down 13.1 percent.

Car imports from "other" countries were down 16.4 percent to 1,952 vehicles.

Deaths up more on 65-mph roads

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Fatalities increased 19 percent on rural highways in the 38 states that raised the speed limit to 65 mph. The increase was almost three times as high as in states that kept the limit at 55 mph.

An NHTSA study said the fatality rate increased 7 percent in 10 states that retained a 55-mph speed limit on rural interstates.

Congress passed a law in 1987 that allowed states with rural interstate highways to raise the speed limit from 55 mph to 65 mph. Alaska and Delaware, do not have any federal interstate highways with the rural designation.

The report is the first of three studies required by Congress to assess the impact on safety of a higher speed limit.

The speed limit has been increased to 65 mph on 89 percent of eligible rural interstate highways. An interstate is designated as rural if it passes through an area with fewer than 50,000 residents.

NHTSA warned that despite the initial findings, the higher speed limit has not been in existence long enough to effectively determine the long-term safety impact.

The study showed dramatic variations among states. About 64 percent of the increase in rural interstate highway fatalities occurred in six states — Arizona, California, Louisiana, New Mexico, Tennessee and Texas.

But in one of those states, California, fatalities increased more on segments of rural interstate highways that kept the limit at 55 mph than where the limit was 65 mph.

By contrast, the overall fatality rate fell in Colorado, Florida, Indiana, Maine, New Hampshire, Oklahoma and Oregon, where the speed limit was boosted to 65 mph.

Critics of the higher speed limit said the study backs their position.

Sales slide for U.S. cars in mid-Jan.

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Following a 2.75 percent sales lag in early January, U.S. automakers reported that sales of domestic cars for Jan. 11-20 continued to slide. The mid-month total was 16.32 percent below last year's.

A year ago, mid-January domestic-car deliveries rose a whopping 48.19 percent over the previous year's, but that was a fluke: the 1987 figures were squelched by the end of the sales-tax deduction for new cars.

The early 1988 numbers were also inflated because consumer confidence had risen following the stock market collapse of late 1987.

Domestic-car sales for Jan. 11-20 totaled 155,973, compared with 186,385 in the same period of 1988. There were nine selling days in each period. The daily selling rate was 17,330 this year and 20,709 last year.

Transplants Nissan, Toyota and Mazda delivered more U.S.-built cars this year, but Honda and the Big 3 reported sales declines.

Nissan's transplant car sales rose to 1,945, up 13.68 percent from 1,711 in the 1988 period.

Toyota's sales of U.S.-built cars more than doubled from 678 a year ago to 1,571. Mazda sold nearly twice as many U.S.-produced MX-6 models produced at its Flat Rock, Mich., plant.

General Motors sold 70,745 cars in mid-January, 21.91 percent fewer than the 90,590 it delivered last year.

Ford Motor Co. reported 52,577 car sales, a decline of 13.62 percent from 60,864 last year. However, Lincoln Continental sales doubled this year.

Chrysler Motors also reported a sales downturn. Deliveries totaled 22,156, down 10.04 percent from last year's 24,628.

Honda's sales of U.S.-built cars were down 2.20 percent — 6,304 this year and 6,446 in 1988.

U.S. light-truck sales slipped 2.99 percent to 102,707 units, down from 105,868 in mid-January 1988.

Nissan was the only light-truck maker to report a gain; it was up 23.41 percent. Chrysler's domestic light-truck sales lagged 1.16 percent; GM's dropped 3.35 percent, and Ford's slipped 5.57 percent.

Combined sales of U.S.-built cars and light trucks were 258,680, down 11.49 percent from last year's 292,253. In mid-January, Big 3 car-truck sales fell 5 to 16 percent. Nissan's sales were up 19.48 percent.

Mid-sizers lead surge

Intermediate sales rise 10% in 1988

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Increased sales of subcompact, compact and intermediate-sized cars helped boost the 1988 calendar-year car sales total almost 4 percent over 1987.

Several new models and strong incentives throughout the year also contributed to the increase.

Car sales in 1988 totaled 10,591,126, up 3.62 percent over the 10,221,310 sold in 1987.

Nine new models joined the Automotive News market-segment list last year.

Sales of intermediates increased marginally in 1988 as four new models entered that segment. Sales totaled 3,738,755, which was 10.36 percent above the 3,387,676 intermediates sold in 1987.

Four models joined the intermediate class last year. The Mercedes 300-SE chalked up 5,331 sales. Dodge Spirit sales were 3,950; Plymouth Acclaim sales were 3,508, and the Audi 100/200 models accounted for 3,306.

GM's contribution of 341,258 W-body (GM10) cars also helped boost sales of intermediate-sized autos.

The next largest increase in 1988 was in the compact-car class. Sales totaled 2,730,173 units, 2.15 percent more than the 2,672,585 sold a year-earlier.

The new Ford Probe wound up with 77,763 sales, which was more than the increase for compact-car class as a whole. The Probe went on sale last spring.

Subcompact sales totaled 2,507,120 in 1988, an increase of 1.68 percent over the 2,465,674 sold in 1987.

Contributing to the increase for the subcompact class was the introduction of three new models.

The Daihatsu Charade finished the year with 11,460; the Eagle Summit had 4,603, and the Suzuki Swift, which went on sale late in 1988 had 524.

Standard-sized cars accounted for sales of 1,403,116, down 1.80 percent from 1,428,836 in 1987.

There was a significant sales decline in the specialty-car market despite the addition of 4,514 new Buick Reattas.

Sales of the more sporty and/or expensive models totaled 202,523 units, 19.62 percent below the 251,961 sold in the 1987 calendar year.

Three two-seat models contributed to the fall of specialty-car sales.

The Pontiac Fiero showed the largest decline of any model in the specialty segment with a year-to-year loss of 17,709 units.

Because of sluggish sales of the two-seater, Pontiac closed the Fiero plant and discontinued the line last fall.

The Mazda RX-7 and Nissan 300-ZX were the other hurting two-seaters in the specialty segment in 1988 compared with 1987.

The three top sellers in the United States last year were Ford Escort, Chevrolet Corsica/Beretta and Ford Taurus.

Escort retained its 1987 position, but Taurus slipped from second place. Corsica/Beretta, a late starter in 1987, moved up from 11th place.

Option hikes, package switches trigger price boosts at Chrysler

HIGHLAND PARK, Mich. — Chrysler Motors has quietly raised the prices of its vehicles by cutting the package discounts on some models and increasing the prices of its optional accessories.

Prior to Jan. 2, it offered a discount package, for example, on standard-wheelbase four-cylinder Caravans and Voyagers. The package no longer includes a free automatic transmission, priced at $565 retail and $480 wholesale.

The company also raised the retail price of its Dakota two-wheel-drive sport pickup by $235 — from $11,058 to $11,293. The wholesale price of that model jumped from $9,831.04 to $10,037.84.

Similarly, the retail price of a D-100 2wd model with an eight-foot pickup box increased $313 — from $9,559 to $9,872. The wholesale price went from $8,848.69 to $9,133.52.

Some of the other models affected by higher prices include the Caravan C/V cargo van, Dakota S, D and W-series 2wd and 4wd pickups, and the 2wd and 4wd Ramchargers.

The accessory hikes include increases of $5 each for speed control, tilt steering column, power door locks and power windows accessories.

Chrysler also hiked the price of optional air conditioning on cars by some $80.

Corrections

A list of nominees for Time Magazine's Quality Dealer of the Year in the Jan. 23 issue of Automotive News did not include William R. Baierl, president of Baierl Chevrolet (Chevrolet-Honda), Wexford, Pa., nominated by the Pittsburgh Automobile Trade Association.

Also, the address for Dynamic Enterprises International, an exhibitor at this week's National Automobile Dealers Association convention, is P.O. Box 69446, Los Angeles, CA 90069.

PRODUCTION

Car output climbs 3% to 158,083

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. carmakers continue to increase their production schedules from week to week.

Last week's targeted output totaled 158,083 cars, 3.00 percent above the previous week's 153,472 and 24.31 percent more than the year-ago week's 127,166.

The year-ago week's output was affected by extended downtime at several plants due to slow sales.

So far this year, 569,745 cars have been assembled, 19.92 percent more than the 475,112 completed last year at this point.

Last week's scheduled output was shared as follows: General Motors, 48.27 percent; Ford Motor Co., 26.72 percent; Chrysler Motors, 12.65 percent; Honda of America Manufacturing, 4.98 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.05 percent; New United Motor Manufacturing Inc., 2.53 percent; Nissan Motor Manufacturing Co. U.S.A., 1.48 percent; and Diamond-Star Motors, 0.32 percent.

Truck output was slated at 95,337 units last week, slightly above (0.98 percent) the prior week's 94,416 and 9.58 percent more than the year-ago week's 87,004.

Year-to-date, 345,303 trucks have been built, 4.91 percent more than the 329,138 assembled last year at this time.

GM closed its Fairfax, Kan., plant today for one week to adjust inventory of the Pontiac Grand Prix. The plant is expected to resume operations Feb. 6.

GM shut down its Reatta Craft Centre in Lansing, Mich., last week due to slow sales and to prepare the plant for convertible production. No date was given for resumption of operations at the facility.

GM's Pontiac Central plant in Pontiac, Mich., resumed output last week after being idle for one week for inventory adjustment.

Overtime was slated last Saturday at GM's Lordstown, Ohio; Pontiac, Mich.; Fort Wayne, Ind.; and Moraine, Ohio, plants.

No overtime was scheduled last Saturday at Ford plants.

However, all Ford plants are scheduled for daily overtime this week.

Canada trucks top cars again

Once again last week, Canadian truckmakers targeted a higher weekly build than the carmakers.

Scheduled production of 21,225 trucks was 1.05 percent below the previous week's 21,451 but 5.37 percent more than the year-ago week's 20,143.

Continuing to lead car assembly, year-to-date truck production totaled 78,310, an increase of 7.16 percent over the 73,080 completed last year at this point.

Auto production was scheduled at 21,095 units last week, 6.48 percent more than the preceding week's 19,811 but 6.57 percent below the year-ago week's 22,579.

So far this year, 72,361 cars have been built.

Ford Chairman Don Petersen delivers speech

Dealers slow to embrace stock sales

Public ownership too drastic for most

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

NEW ORLEANS — The idea of public ownership — once touted as the next revolution in automotive retailing — may end up impacting the nation's dealer body with the force of a whimper.

Financial analysts believe dealers will likely rely on less extreme measures to finance their growth. Limited partnerships, for example, will help ease dealer debt loads and fund expansion without the expense and risk involved in a public stock offering. It is believed that the number of dealerships that actually do go public will wind up being quite small.

"I think there are some dealers that will definitely go public, but it will only be a few," Ron Tonkin, the new president of the National Automobile Dealers Association, said at last week's convention. "Dealers are very private individuals, and I don't see many of them relinquishing the control they have to shareholders.

"I don't know of any dealers that are actively planning for public ownership,

NADA: *Tough president promises lively year for factories*

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NEW ORLEANS — An adversarial wind blew last week signaling a change in dealer-factory relations as the National Automobile Dealers Association held its 72nd annual convention.

The eye of that potential hurricane is new NADA President Ronald B. Tonkin, whose tough talk reflects dealer concern over creeping factory encroachment on dealer independence and stability.

Tonkin, a Portland, Ore., megadealer who first gained national attention in the early 1960s as the country's youngest Chevrolet dealer, is taking the 20,000-dealer association head-to-head with the automakers. He complained the manufacturers' profits are soaring while dealer profits across the country gradually dwindle.

Tonkin cites recently released NADA figures that showed average dealership profit margins shrunk to 1.7 percent of sales in 1987, the lowest margin in five years.

"Like the characters from the movie 'Network,' we're mad as hell and we're not going to take it any more," he vowed publicly last week.

Pawned Yugos push Global to bankruptcy

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Yugo America truly had its back to the wall when it filed for bankruptcy last week, having in effect pawned its car inventory, the company's largest asset.

As the gravity of the situation was made clear to dealers at the Yugo make meeting in New Orleans last Monday, dealers started leaving the meeting in ones and twos to bail out of their franchises.

"Fax me a letter canceling the deal, and I want it here by noon," one dealer said into the phone outside the meeting room at 11 a.m. "And call the bank and tell them what we're doing. Don't accept any more Yugo warranty work. Refer people to (another Yugo franchise in the next city) and tell 'em we gave up the franchise," he said.

Another caller phoned home and told the dealership not to accept delivery of some new Yugos.

A short time later, Global Motors Acting Chief Executive Officer Marcel Kole left the room and spent about 30 minutes talking on a pay phone down the hall, with a colleague pacing up and down to keep reporters at bay.

Dealers said later that in the first part of the meeting, they had tried to persuade Kole not to declare bankruptcy. While he was on the phone, some dealers who left the meeting said the decision had been reached.

Kole got off the phone around 11:30 a.m. and spent another 10 minutes behind closed doors with the dealers.

The dealers asked to meet among themselves for a few minutes, while Kole waited in the hall.

A few minutes later, he was asked to join the meet-

Chrysler, Renault to build new Jeep

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Pieces of Chrysler's global strategy began falling into place as the company revealed plans last week to add two new models its Jeep-Eagle line involving foreign manufacturers.

And along with improved fourth-quarter earnings, Chrysler's financial statement disclosed that the company not only purchased nearly $2 billion worth of cars and components from its Mitsubishi Motors Corp. partner, but it made $57 million from Mitsubishi's decision to go public last December.

Separately, Automotive News learned last week that Chrysler has also agreed to give 15,000 cars it imports from Mitsubishi to that company's U.S. unit, Mitsubishi Motor Sales of America, in exchange for 15,000 more Lasers from the Diamond-Star Motors joint venture in Normal, Il. Mitsubishi Motor Sales will give up a like number of Mirage sedans that are scheduled to go into production this fall.

Chrysler Chairman Lee A. Iacocca said last week that it will build a new Jeep model code-named the JJ in a joint venture with Renault, using plants in both Europe and North America. A day earlier, it was announced that beginning in 1991, Jeep-Eagle will receive 30,000 Hyundai Sonatas a year from the Korean automaker's Bromont, Quebec, plant.

Chrysler and Renault are expected to conclude the 50-50 joint-venture agreement by June. Chrysler will distribute the JJ exclusively in North America and

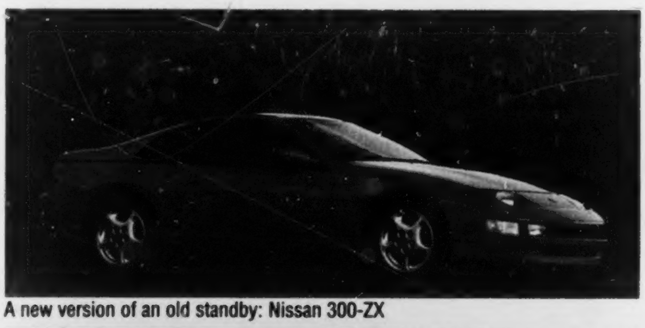
CHICAGO: *3 sports cars from Japan top list of new models at big Midwest show*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER



A new version of an old standby: Nissan 300-ZX

Mazda's MX-5 Miata is a sports car for the economy-minded

This week, the auto world's eyes will look into Chicago's lakefront convention center, McCormick Place, and focus on three cars debuting at the Chicago Auto Show.

The nine-day exposition opens Saturday.

The scrutiny will be intense for good reason. Though the number of new-car, show-car and prototype unveilings won't be as great as at last month's North American International Auto Show in Detroit, Chicago offers a glimpse into the direction of future automotive marketing.

First, because these three vehicles are sports cars — one an entry-level street racer and two that will fight for a share of the market's upper end. Second, because all three cars are made in Japan.

The newcomers are the Mazda MX-5 Miata, the Acura two-seater and the restyled Nissan 300-ZX.

Before this year's restructuring of the Detroit display as the North American International Auto Show, an exhibit that received enormous economic and promotional support from the Big 3 with the unveiling of nearly two dozen production and show cars, it was the annual event in Chicago at which Motown's finest wares were paraded.

This year is different. Domestic manufacturers will pop a few corks with prototype car debuts.

Nissan, Honda and Mazda have chosen the Chicago Auto Show to unveil top-flight sports cars.

The significance here is the significant market — the heart of the United States.

Debuting at Chicago will be Mazda's return to affordable sports cars, the Mazda MX-5 Miata.

Fitted with an engine block from the firm's entry-level 323 subcompact, the rear-drive MX-5 takes transmission technology from the 929.

To categorize the Miata, it's close to a 1990s' Japanese rendition of the 1960s' British Lotus Elan sports car. Available as an open-air roadster, the MX-5 will appeal to minimalist sports-car buyers. Estimated price: $13,000.

The sports car with the greatest veil of secrecy surrounding it — and the one that should gain a great portion of attention — is the mid-engined two-seat Acura sports car, said to be called the MXS.

So quiet have the Honda people been about the car's existence, that it wasn't until his annual New Year's message that Honda Motor Co. President Tadashi Kume acknowledged that a "mid-ship type sports car" would be introduced at Chicago.

Power will be delivered by a new 3-liter V-6 engine, capable of propelling the car to speeds of 155 mph. Price is said to be near $55,000.

Also aiming for the market's upper section is a totally rede-

Toyota, Nissan rethink operations

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Kusunoki

McCurry

LOS ANGELES — Toyota is setting up a new company to coordinate the activities of its North American subsidiaries, and Nissan is considering how to best restructure its U.S. operations.

Toyota announced last week that it will incorporate Toyota Motor Corporate Service of North America under Chairman Tatsuro Toyoda, executive vice president of the Japanese parent company.

The new unit will have its main office in New York City and branches in Washington, Detroit and Lexington, Ky.

It will be a wholly owned subsidiary of Toyota Motor Co. in Japan and is described as an organization to gather information and coordinate and Toyota's North American manufacturing operations during expansion to full-scale production. Toyota said it is not a move toward establishing a North American headquarters.

Joining Toyoda and two members from Toyota Motor Co. on the new corporate services company's board is Kaneyoshi Kusunoki, who is chairman of both Toyota Motor Manufacturing and Toyota Motor Sales U.S.A.

Also serving on the corporate services board are Robert B. McCurry, executive vice president of Toyota Motor Sales; Alex M. Warren, senior vice president — administration at Toyota Motor Manufacturing; and Kunio Shimazu, president of the new unit and previously head of Toyota Motor Co.'s offices in New York.

Toyota's new 29-employee company will still leave final authority for North America divided among several executives, but allow some operating coordination to be handled in the United States.

It also does not formally change the chain of command for North American sales and marketing subsidiaries. But the coordinating role of Toyota Motor Corporate Services also includes preliminary planning for Toyota's assembly plant in Cambridge, Ontario.

Meanwhile, Nissan has launched a full-scale study of whether to restructure its U.S. sales, manufacturing, design, lobbying and research and development subsidiaries under a single umbrella, said Thomas Mignanelli, executive vice president, Nissan Motor Sales U.S.A.

The study is being conducted for Nissan by McKinsey & Co., a New York-based management consulting company.

The study's findings — expected late this year — could recommend anything from a coordinating body similar to Toyota's move or a comprehensive top-to-bottom consolidation like that of Honda North America, Mignanelli said.

"We're just trying to see what the most efficient method would be," he said.

Nissan currently has nine U.S. subsidiaries, with headquarters scattered on both coasts, the Midwest and Tennessee.

To date, only Honda among the nine Japanese carmakers active in the United States has consolidated operating control of its North American subsidiaries under a single executive.

Tetsuo Chino, who spearheaded American Honda's dramatic growth in the United States, is president of Honda North America, with 14 car, motorcycle, all-terrain vehicle and other subsidiaries in the United States, Canada and Mexico under his control.

Other Japanese companies, even those that have added manufacturing, research and development and design facilities in the United States since establishing a U.S. sales arm, split control of their North American subsidiaries between two or more executives on the board of the Japanese parent company.

With North American manufacturing growing, the problems of coordinating manufacturing and sales in North America from Tokyo also are increasing for the Japanese.

Toyota-China agreement on trucks expected

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Toyota Motor Corp. will soon announce the first major production contract between Chinese and Japanese manufacturers.

An agreement has been reached for Toyota to cooperate with the Chinese in establishing a medium-size truck factory in the northeastern city of Changchun.

Details of the agreement are not yet available but it is understood to provide for a pilot program of truck production with a large portion of imported Japanese components, leading to the manufacture of larger numbers of trucks under license from Toyota.

The Japanese company will also provide technical assistance and make some kind of technology transfers.

Toyota sources indicate that the company would soon be making an announcement on the project but declined to give details.

Toyota will not, however, invest in the new facility that will be funded by various Chinese companies. No foreign automotive company has formed a joint venture with the Chinese since the American Motors deal with Beijing Jeep in 1983. All agreements since then have not involved capital transfers from overseas.

Changchun is the center of production for the medium-sized Jiefang Liberation truck that provides the backbone of China's transportation fleet.

Daimler-Benz recently signed an agreement for establishing a new heavy-truck facility in the same city.

Meanwhile, a light-truck plant will soon start production in Beijing employing Isuzu technology and components. However, the Japanese company is not a partner in the factory, but merely a supplier. The joint-venture partner of the Beijing Light Automobile factory where the trucks will be produced is the Hong Kong-based Shortridge Ltd.

The agreement with Toyota is a significant breakthrough and comes against a background of considerable misunderstanding and poor relations between the Chinese government and Japanese automotive industry. The Japanese makers are still held responsible for the Hainan Island import scandal in which the island's local government purchased unprecedented numbers of Japanese cars and shipped them at considerable profit to other parts of China.

Chinese officials have accused the Japanese of only being interested in China as a market for their products and have showed an unwillingness to contribute toward the development of the local automotive industry. Toyota, however, has been notably persistent in efforts to do business in China.

In 1984, Toyota signed a contract for the production of pickup trucks in the southern city of Canton. However, a combination of financing problems and the Hainan scandal lead to the contract's cancellation. The Japanese company has maintained a representative office in Beijing and worked hard to get another deal going.

It had previously been assumed that the Changchun contract would have gone to Italy's Iveco, Fiat's truck unit, which has a technology transfer agreement with the Chinese for upgrading medium-size truck production. However, Iveco does not appear to have made much progress with its agreement.

Surge in van conversions ups month's RV shipments

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Van conversions helped the RV industry wholesale a near-record number of vehicles in November.

It wholesaled 32,300 vehicles that month, the second highest total of any November, behind the 33,800 units shipped in November 1977.

Last November's shipments also represented a 25.19 percent increase over the 25,800 units shipped in the like period of 1987, according to the Recreation Vehicle Industry Association.

For 11 months of 1988, industry shipments of 395,200 units were up 5.89 percent from the 373,200-unit level of a year earlier.

Van conversion shipments — with a 52.10 percent surge in November and a 10.70 percent climb for January-November 1988, compared with year-ago marks — made all the difference in the industry's performance.

The 18,100 van conversions shipped in November were easily the highest monthly tally on record, according to RVIA, and pushed the 11-month total of 187,200 units well beyond the previous historical high of 181,900 for all of last year.

Shipments of vans without seats from Detroit automakers to converters tapered off in November, though the 11-month total still led 1987 by a comfortable margin. Detroit's four manufacturers shipped 18,600 raw chassis to converters in November, off from 19,500 a year earlier. For 11 months of last year, they shipped 217,400 such units, up from 200,500 a year earlier.

GM offers RVIA a hand on safety

Converters optimistic they can meet seat, steering wheel rules

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — Van converters got a new lease on life after their top representatives met with General Motors officials and were assured that there were ways to meet upcoming governmental standards and that GM would help them do so.

The Recreation Vehicle Industry Association's Automotive Liaison Committee met with GM officials here Jan. 26 to discuss crucial new standards that will impact van converters, beginning in the fall of 1991 with the start of 1992 model-year production.

Essentially, the two major new Federal Motor Vehicle Safety Standards are FMVSS 204, which has to do with the intrusion of the steering column into the driver's compartment, and FMVSS 208, which relates to the amount of damage a test dummy may sustain in a frontal barrier crash test.

GM engineers told RVIA that FMVSS 204 is manageable. Its only likely limiting effect will be that converters won't be allowed to change the steering wheel.

FMVSS 208 is much more critical, however. It has to do with seat-belt retention and the height, size and angle of installed seats.

Ford officials previously told RVIA that because of this standard it will stop shipping seat-delete vans to converters by the 1992 model year.

However, GM engineers believe that, if they work jointly with RVIA and its converter members, they would still be able to ship the seat-delete units, which are very important to the work of the converters.

GM said it would be able to ship the seatless vans if the seats that converters installed were put in according to its prescribed envelope of dimensions.

It also said it would assist RVIA in testing representative vehicles that RVIA, through its seat suppliers and installers, was able to supply to make sure they met the FMVSS standard.

RVIA, in turn, said it would focus on getting its converter members to pull together for the effort.

RVIA officials left the meeting rather elated. And they felt that, with GM's offer of help and Chrysler Motors' offer to work with them to provide data for converters so they could get independent testing done, Ford would retreat from its hard-line position as well.

RVIA plans, in fact, to form a new subcommittee of its Automotive Liaison Committee expressly to deal with the upcoming safety issue, according to Jerome Loftus, RVIA's general counsel.

Members have already been selected, and the association expected to officially form the subcommittee as early as this week.

It had been waiting until it met with all the chassis manufacturers before forming the subcommittee.

GM was the third and final chassis manufacturer it met concerning this subject.

RVIA did meet with Ford officials last week in Arizona, but on a different subject.

"We think we may get some change from Ford," Loftus said. "We can't see them remaining as adamant (in refusing to ship seat-delete units) as in the past," he added.

He felt that a meeting of its new subcommittee with Ford might come as early as next month.

"If the industry is forced to use their (Ford's) seats that would present a big problem" in severely hampering the work converters could do, Loftus added.

He said that "from our perspective, the (GM meeting) was very positive. We were very happy that Chevrolet will work with us to try to achieve a certification by the van converters. They were very positive in their approach."

Loftus wasn't sure what restrictions even the GM proposal might place on van converters in terms of the many different seating configurations they now use.

"They may have as much liberty as before or maybe not," he said.

However, "GM has taken a positive approach of working with this industry to determine how much versatility manufacturers will retain in the installation of their seats," Loftus concluded.

The new safety standard itself is very comprehensive and complex. It relates to how much injury may be sustained in the entire front envelope of the vehicle, including the dashboard and windshield.

While Chevrolet will work with the industry to provide as much support to converters as possible, it is under the proviso that if a converter puts his own seats in, he assumes the responsibility for that work.

Ford previously said it wouldn't ship vehicles without seats, regardless of whether the converter assumed the responsibility for his own installations or not.

Meanwhile, a GM source said its future dimensions governing the size of seats and how they should be installed would not force converters to buy their seats from GM. They would still be free to purchase them from any of their current suppliers, as long as they were of certain dimensions and installed according to a certain height, position, etc. in the vehicle.

The GM source did believe, however, that the new installation criteria would impose some restrictions on the multitude of different styles and seating configurations that converters currently use.

"It will have to be according to very rigid criteria, but it's better than not being able to install them at all."

Some GM officials themselves were relieved by the engineering opinions given at the meeting.

In their original discussions of these governmental standards, they had thought the standards were so restrictive that they even governed the coefficient of friction of the fabric — in effect, the manner in which the dummy slid off the seat during a crash test.

"We were ready to sell a pair of Velcro pants with every one of our vans, and that's how we would have handled that problem," the official jokingly said.

Vixen still looking for help, hopes for deal in 30 days

Vixen Motor officials are still working against the clock to come up with a deal to save their motor home company.

Officials of the Pontiac, Mich., firm have been engaged in serious negotiations with several interested parties, but declined to name them.

Al Dryer, Vixen president, said Vixen was talking to "a number of companies in and outside the state. We can't divulge who is looking at us."

"Within the next 30 days, you'll hopefully see some announcement and letter of intent or offering. I think I have a real good chance of bringing a deal to the table," Dryer said.

However, Automotive News was able to uncover one major company that had made a close inspection of Vixen's product and facilities and obtained the following candid assessment of its potential:

"I think the product has some potential, but the thing that concerns me is to first get out of that facility. You will never generate the volume in that facility that it was designed for," said one of the company's officials.

"You would also want to do a lot of durability testing for the vehicle. When the vehicle was originally designed, it was well tested, but then they shut down and had a crash program on a new product. I have some suspicion about the heating," the executive continued.

"Then you'd have to do some market research and find out what's wrong with its sales acceptance. The people we talked to thought the price was stiff," he added, alluding to a price in the low $40,000 range.

He said costs would have to be cut to bring product price down.

"You gotta get out of that facility," he said, indicating its high overhead.

"That's a very expensive clamshell-type body they manufacture. And the other area is the interior upfitting. It's very labor-intensive to upfit the interior," he added.

RV TRENDS

JOSEPH BOHN

"The product has some potential, if you get it down to a realistic planning volume," he said, adding that Vixen's current production facility was too huge for such a volume level.

The official said Vixen might "interest me personally, but we have so much on our pallets that we couldn't jump on it fast enough." Hence, the company elected to pass on the deal.

Another major company also passed on the deal because it has had its own small motor home under development for some time.

Oshkosh restructures

Meanwhile, Oshkosh Truck Corp. of Oshkosh, Wis., said it is forming a chassis division to operate its recreational vehicle and light-truck chassis business.

The company appointed Bud Raupp vice president and general manager of the new division.

Oshkosh recently announced the completion of its purchase of Deere & Co.'s motorized vehicle chassis business. Financial terms were not disclosed.

Oshkosh signed a marketing and field-service support agreement for the chassis business with Clarke Power Products, Cincinnati. Clarke previously provided similar support to Deere through its 44 distributors and 700 service locations.

Under terms of an agreement, the Deere chassis business will be transferred to Oshkosh Truck over a period of about 12 months. As Oshkosh phases in production during the transition period, Deere will continue to supply Oshkosh with support services.

Because the Oshkosh factory will be unable to absorb the volume of this new line of about 8,500 units a year, a plant-site search has begun.

It is expected that about 100 people will be employed at the new facility with administrative and technical personnel remaining at the Oshkosh headquarters.

Ford chassis delay

Ford has delayed production startup of its 16,000-pound Class A motor home chassis until April 3. The unit had originally been slated to go into production last November, but the company says further testing is required.

Car output running 17% ahead of '88

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

United States automakers scheduled last week's output at 147,425, 7.50 percent below the previous week's 159,378 but 15.76 percent more than the year-ago week's 127,356.

So far this year, 718,465 cars have been assembled, 17.19 percent more than the 613,085 built last year at this point.

Last week's targeted production was shared as follows: General Motors, 45.51 percent; Ford Motor Co., 27.42 percent; Chrysler Motors, 12.96 percent; Honda of America Manufacturing, 5.61 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.86 percent; New United Motor Manufacturing Inc., 2.71 percent; Nissan Motor Manufacturing Co. U.S.A., 1.59 percent; and Diamond-Star Motors, 0.34 percent.

Truck production was scheduled at 92,445 units last week, 3.66 percent below the previous week's 95,961 but 12.66 percent more than the year-ago week's 82,057.

Year-to-date, 438,372 trucks have been assembled, 5.90 percent more than the 413,951 built last year at this time.

GM said it will "idle" its Framingham, Mass., plant permanently on Aug. 1. The plant assembles the A-body Oldsmobile Cutlass Ciera and the Buick Century. Production of the A-bodies will then be consolidated at the Oklahoma City plant.

GM's Fairfax, Kan., plant resumed production today after being idle for one week to adjust inventory.

GM's Tarrytown, N.Y., plant closed today for conversion to the all-purpose vehicles — Pontiac Trans Sport, Oldsmobile Silhouette, and Chevrolet Lumina APV.

On Jan. 30, a fire shut down most of the afternoon shift operations at Ford's Utica trim plant in Utica, Mich. The shift resumed operations the next day.

Ford slated overtime last Saturday at its Wayne, Mich.; Louisville, Ky.; and Twin Cities, Mo., plants.

All Ford plants are scheduled for daily overtime this week. The Norfolk, Va., facility is slated for overtime next Saturday.

Canada trucks near 100,000

Last week's scheduled Canadian truck production of 21,157 units dipped slightly (0.69 percent) from the previous week's 21,303 but increased 17.98 percent from the year-ago week's 17,932.

Year-to-date, 99,545 trucks have been built, 8.96 percent more than the 91,363 completed last year at this point.

Scheduled auto output of 21,133 last week fell only 23 units short of the truck estimate. The carmakers' schedule was 1.64 percent more than the previous week's 20,792 but 7.31 percent below the year-ago week's 22,799.

So far this year, 93,191 cars have been built, 15.59 percent below the 110,397 built last year at this time.

Injury, training woes hit new Mazda plant

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER
Copyright 1989, Automotive News

The number of injuries among workers at Mazda's new plant in Flat Rock, Mich., raises fundamental questions about the much-heralded team manufacturing system, about the quality of training programs funded in part by the state and about a provision in the UAW contract that allows Mazda to use part-time workers who collect no benefits after they are injured.

Injuries such as those being seen at Mazda are "an enormous problem in the auto industry," according to the UAW. But the union, as well as worker advocates and health professionals familiar with the situation said they are concerned about the rate at which the workers were injured at Mazda Motor Manufacturing (U.S.A.) Corp.'s new plant.

Mazda reported 97 repeat or cumulative trauma injuries in 1988. By comparison, Chrysler Motors reported 54 for a much larger workforce at its Sterling Heights, Mich., assembly plant. The Sterling Heights plant employed 3,500 workers on two shifts all year. Mazda's workforce started with a single shift early in 1988; a second shift was added in May and the plant now employs 2,770.

These reported injuries at Flat Rock and Sterling Heights were to the upper extremeties and result from repetitive work such as the use of air tools. They include carpal tunnel syndrome — an injury to the hand or wrist — and other injuries from the shoulder to the hand.

AUTOMOTIVE NEWS/JOE WILSSENS

Brian Blanton, an injured team leader, was fired and is suing Mazda

In Big 3 plants, such injuries generally afflict workers only after periods longer than the Mazda workers have been on the line, said health professionals and the UAW.

But Don Kricho, director of safety and health at Mazda, said the injury rate "peaked a couple of months after the first shift began production (in 1987) and then fell off dramatically." The same pattern was repeated when the second shift was added, he said.

Kricho said his counterparts at other Japanese transplants reported the same injury pattern with their new workforces. Gail Neuman, vice president — human resources at Nissan Motor Manufacturing Corp. U.S.A., said that was "generally true" at Nissan.

The Mazda plant has the safest procedures of any plant they have worked in, said Kricho and James F. Korowin, vice president — manufacturing, both veterans of Big 3 plants.

But the contrast to a traditional Big 3 plant lies in more than the number of injuries. The high number of job classifications and union contract provisions at Big 3 plants ensure that injured workers return to less physically demanding jobs.

But Mazda has no contract requirement to bring back injured workers. As a factor of team production, there are no job classifications that would ensure easy work for an injured worker. So an injury that could be nettlesome for a worker in a Big 3 plant can become debilitating at a team production plant such as Mazda.

Workers told Automotive News they were injured at the Mazda plant, then fired or not called back because of those injuries. Two have filed suit.

Most of those familiar with the problems at the Mazda plant agreed to talk to Auto-

AD AUDIT

Chevy, GMC look at dealer groups

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet and GMC Truck will find out how their dealer groups are spending money generated by their new ad assessments next month when both divisions audit 400 dealer advertising associations.

This is the first audit since September, when the two General Motors divisions instituted a mandatory 1 percent charge on the dealer invoice price of each retail vehicle to cover local advertising.

The audit may turn up a few surprises. For instance, one group — The Chevy Network in Cleveland — sent each of its 73 dealer members a $500 gift certificate for Saks Fifth Avenue from dealer advertising funds.

It also sent each of its members a $2,000 check to attend the National Automobile Dealers Association convention.

Charles Ohl, president of The Chevy Network, defended both expenditures as "administrative expenses." The gift certificates were "one of the benefits of belonging to our dealer group," said Ohl. The checks for the NADA convention were sent to encourage member dealers to attend, he said.

"Going to the NADA convention promotes our business and the automotive business in general," Ohl

Acura's new flagship: the 1990 NS-X, a $50,000-plus, two-seat, mid-engine sports car

HOT CARS: *Japan's sport models steal Chicago scene*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — The Windy City featured sub-freezing temperatures for the opening of the Chicago Auto Show, but nothing could cool the heat generated by three Japanese automakers who unveiled their sports cars for the coming decade.

That is not to say the domestic automakers did not try to extinguish the fire lit in their own backyard by Mazda's MX-5 Miata, Nissan's redesigned 300-ZX and Acura's flagship sports car prototype, the NS-X.

Ford took the wraps off two vehicles it kept from last month's North American International Auto Show in Detroit. But try as it did to capture overall show star status, Ford — and all most every other automaker, domestic and import — were upstaged by Japan's new sports car entries.

Ford unveiled Mercury One, a concept model that shows the styling cues for the next generation Tracer, and its 1990 high-line sedan, the Lincoln Town Car. The Town Car, however, is not displayed at the show and was shown to the press at a news conference.

Nissan's redesigned 300-ZX packs 222 to 300 hp

Among the other cars making their North American debut were the two-door Audi Coupe; Sterling's new 827 sedan and five-door SLi; and the Subaru Legacy four-door sedan that recently set a world closed-course endurance speed record for cars in its class.

Rounding out the more than 900 vehicles on display at McCormick Place are those show cars and trucks that debuted last month at auto shows in Detroit and Los Angeles.

Acura targets 300,000 cars but no V-8

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — Although a V-8-powered sedan a la Lexus and Infiniti won't be on the Acura program, the division is expected to contribute 300,000 units toward Honda's goal of selling 1 million cars a year within three years.

Tetsuo Chino, president of Honda North America, said the top position in Acura's lineup will be filled by the V-6-powered NS-X two-seat sports car, unveiled at the Chicago Auto Show. Only 3,000 cars, which will be priced in the $50,000 to $60,000 range, will be sold per year with the remainder of Acura's sales split between Legend and Integra.

Chino also admitted that some Acura dealers have not turned a profit and the company is working with them.

Early reports on the division seemed to indicate that a V-8 engine for both the NS-X and a "flagship" sedan was under development. But Chino denied that either the powerplant or a sedan to compete with Mercedes-Benz, BMW and the coming Lexus and Infiniti sedans was ever under consideration.

Chino said Honda's U.S. staff is "relieved after seeing the (Lexus and Infiniti) cars. Their target market is not the Acura target market."

While he said Acura is competing with European luxury imports, he said the goal was not the upper reaches, but more of the mid-priced segment. "We stick to the original plan," Chino said, adding that

'90 Cutlass Supreme

HIDDEN IMAGE

Look what got caught with its wheels up, er, down. It's Oldsmobile's four-door version of the GM10 sedan, a 1990 Cutlass Supreme. The car features wraparound glass for the backlight. The car was snapped in this compromising position up on jackstands near a hotel in the Phoenix, Ariz., area.

GM dumps carryover allowance

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will not pay the 5 percent carryover allowance to dealers on 1989 vehicles left in their inventories when the 1990 model year starts.

The move marks a major shift in the way GM has done business since the 1950s and is certain to anger dealers.

GM would not confirm the elimination of the allowance, but said dealers would receive letters in the next couple weeks regarding "modifications" in the allowance.

Select dealers, however, have been notified of the change and have seen a sample of the letter to be mailed to all GM dealers. It spells out the elimination of the allowance.

Those select dealers have been told that instead of paying the dealer the 5 percent allowance, the divisions will use the money for incentive programs before the traditional year-end cleanup. That, GM officials have told dealers, will help dealers clear out 1989 inventory before the 1990 model year starts.

GM generally sends letters to its dealers at this time of year outlining how much the allowance will be. Traditionally, GM has paid a dealer 5 percent of the retail price of the base car plus factory installed options on vehicles left in the dealer's inventory when the next model year starts. A GM representative generally has come into the dealership to count the leftover vehicles, and a check has been issued to the dealer. Now, dealers will not receive such checks.

In recent years, that allowance hasn't always been 5 percent on every vehicle. The amount paid on lower-margin captive imports, for example, has been less than 5 percent or eliminated entirely.

At the end of the 1986 and 1987 model years when GM had a million cars left over, dealers gave up part of the allowance to fund massive year-end cleanup programs. In those years, dealers had the option of taking only half of the allowance to participate in "The Big One" program.

In the 1988 model year, GM reinstated the 5 percent carryover allowance because the automaker had kept production in line with sales throughout the year and dealers were left-with far less inventory than the previous year.

Upcoming changes in the carryover allowance already have drawn criticism from dealers who know about it, and the move undoubtedly will trigger even more protest when the entire GM dealer body is made aware of it.

Dealers say it will force them to be conservative in ordering vehicles for toward the end of the model year.

Dealers aware of the change complain that they will have no way to ascertain whether the carryover money is really used for incentive programs. In addition, some say national programs aren't always helpful since markets vary from region to region. Those individuals argue that they know their markets better than GM does, and therefore they could put the funds to better use than GM can.

Others say it is yet another take-away by GM, which this year has eliminated allowances on demonstrator models and cut new-vehicle prep time.

Virginia megadealer bankrupt

Horvath, former AIADA chairman, had seven stores

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A megadealer in this area was forced to sell one of the most successful Toyota outlets in northern Virginia and may be forced to sell two other Toyota stores in Virginia due to personal bankruptcy.

A Virginia Hyundai franchise may also become involved in the proceedings, court records show.

Steve P. Horvath of Great Falls, Va., former chairman of the American International Automobile Dealers Association, filed for personal protection under Chapter 11 of the U.S. Bankruptcy Code on Jan. 9. The filing occurred after Horvath sold his flagship store, Tysons Toyota in Tysons Corner, Va., on Jan. 4. Tysons Toyota was bought by the Kline Automotive Group of Gaithersburg, Md., for $2 million, court records show.

Horvath owns or holds controlling interest in six other car dealerships in Virginia and the Southeast. His Horvath Group also controls a variety of other businesses. Horvath was elected chairman of AIADA in 1985. He entered the automobile business in 1946 as the operator of a repair shop.

According to documents filed in U.S. Bankruptcy Court in Alexandria, Va., by Horvath's accountants and lawyers, Horvath has unsecured liabilities estimated at $15 million. Horvath will make an estimated $1.2-million from the sale of Tysons Toyota and hopes to realize additional funds from the sale or restructuring of Fairfax Toyota in Fairfax County, Va., and Charlottesville Toyota in Charlottesville, Va. He also is trying to sell a $1.3 million home in Great Falls, Va.

Horvath could not be reached for comment. Creditors contacted by Automotive News refused to speculate on why Horvath filed for bankruptcy or the disposition of Horvath's debts.

A spokesman for Mid-Atlantic Toyota in Baltimore — which serves as distributor to Horvath's Toyota stores in Virginia — said the company has been notified that Horvath or his representatives will meet with interested buyers for Fairfax Toyota and Charlottesville Toyota.

Horvath also has Toyota franchises in North Carolina and Atlanta. In addition, he owns Manassas Dodge in Manassas, Va. Court documents did not mention those three stores in connection with debt repayment. The documents did mention Horvath's Fairfax Hyundai as a possible source of reorganization capital, however.

Court documents said Horvath owns 75 percent of Fairfax Toyota and 90 percent of Charlottesville Toyota. Those two dealerships generate $65 million to $70 million in annual sales.

Although Fairfax Toyota has been at its present location only about 11 months and is, in effect, a new business, it is the No. 1 Toyota dealership in the five-state Mid-Atlantic region. Charlottesville Toyota has operated at its present location for many years and is well established in the Charlottesville area.

The documents said those dealerships "could serve as the cornerstone of any reorganization effort by Mr. Horvath. Both have a myriad of problems as a result of the manner in which they were capitalized and will require some restructuring if they are to generate cash flow with which to pay the debtor's creditors." The filing added that both businesses would constitute separate reorganization proceedings.

Court records also say Horvath owns 25 percent of Fairfax Hyundai. "This dealership is extremely profitable," the document said. "There is a lien against the debtor's stock in the dealership, which is currently being satisfied out of his share of the profits, all of which are distributed to the shareholders because the dealership is a subchapter S corporation. In approximately 24 months, after the leinholder is paid off, the debtor's share of the profits could be substantial."

Summarizing Horvath's finances, his accountants and lawyers found that "any reorganization of the debtor will depend on the availability of funds from the Tysons Toyota sale and from Fairfax Hyundai; on the successful reorganization or sale of Fairfax Toyota and Charlottesville Toyota so that they will generate funds with which to pay creditors or to provide capital for the debtor's other businesses."

Horvath was also involved in two failed tire recycling enterprises, Georgia Reclamation Center and Maryland Resource Recovery Center. His counsel said, "It is possible that with a modest infusion of capital and/or a joint-venture arrangement, these tire recycling centers would generate sufficient income to service their debt."

The counsel addedy, "At present, neither of these businesses is operating. Their assets are encumbered by millions of dollars of debt."

AIADA President Robert McElwaine said of Horvath, "Nobody in the world deserves this less than Steve Horvath. He gave so much to this business. He was the kind of guy who would lead every fund drive, the first guy you would call if you needed a volunteer."

Horvath's rubber reprocessing system turned out to be a terrible problem, McElwaine said. "I remember how enthusiastic he was about it," said McElwaine. "He thought it made terrific sense from a business and environmental standpoint. He was the kind of guy who could inspire people."

Prices skid at repeat auction for Pepe deals

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

CAMDEN, N.J. — Five southern New Jersey dealerships in the Pepe chain brought lower prices the second time they were auctioned in U.S. Bankruptcy Court here, and the process is still far from complete.

Last October, the court auctioned 10 dealerships owned by Richard T. Pepe and his wife, Virginia I. Pepe, for a combined total exceeding $30 million, but a second auction became necessary when some of the bids fell through.

The most sought-after Pepe dealerships — Pepe Lincoln-Mercury-Sterling-Merkur and Pepe Toyota, which occupy the same property in Millville, N.J. — brought a combined bid of $10 million in the first auction.

But that bid and the next-highest bid fell through, and in the second auction, held Feb. 3, the same property received a high bid of only $5.5 million.

The process could lag if bankruptcy Judge Judith Wizmur throws out that bid because the amount does not cover a property mortgage.

According to court records, in the summer of 1987 Pepe spent $6.2 million for 19 acres and three buildings for the Toyota and L-M deals.

Monthly interest payments for the complex reached $50,000, Pepe said in the documents.

William Perretti Sr. made the $10 million bid, which was rejected by the court because Toyota and L-M declined to approve his franchise application. The refusal was due to consumer complaints involving his other dealerships that led to a suit filed by the New Jersey state attorney general, attorneys in the case said.

The next-highest bid — $9.6 million — came from partners Richard Catena and Richard Rediker. But they withdrew their bid because Catena had been involved in an odometer tampering case and was unlikely to gain franchiser approval, said Robert Baime, the attorney for the trustee in the case, Sanford Feld.

That withdrawal threw the property back to auction, since only Perretti and the Catena-Rediker partnership had bid on the two stores.

The high bid of $5.5 million in the Feb. 3 auction was submitted by Rediker alone, attorneys said.

Martin Margolis, an attorney and dealership broker who represented the October high bidder for the L-M and Toyota stores, said he found it "incomprehensible" that the court would tentatively accept a bid, which was nearly half the amount of Perretti's bid, from one of two partners that had already encountered problems with obtaining approval.

The judge set a hearing for last Friday to determine whether to accept Rediker's bid.

Other Pepe dealerships that were re-auctioned Feb. 3 were:

- Pepe Oldsmobile-Pontiac-GMC in Millville, N.J. It received a $1.9 million bid from Catena and Rediker in October; Rediker bid $1.1 million for it in the second auction.
- Pepe Nissan-Yugo in Vineland, N.J. Perretti bid $1.7 million for it in October. John Lilliston, who has Chrysler-Plymouth and Dodge franchises and a Ford franchise in Vineland, bid $1.375 million in the second auction.
- VIP Chevrolet-Oldsmobile in Mays Landing, N.J. Manuel Pombo, principal stockholder of Egg Harbor Motors, which has Ford, Volvo, Chrysler-Plymouth and Jaguar franchises in three states, bid $3.2 million for it in October, but couldn't secure franchise approval from General Motors, attorneys said. Charles Foulke, who owns Chevrolet and Chrysler-Plymouth stores in New Jersey, bid $2.6 million in the second auction.

Manufacturers have 60 days in which to rule on the franchise applications of the new buyers, starting from the receipt of the application with all necessary financial information.

Volvo GM sets its sights on 3rd place in Class 8

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

COLUMBUS, Ohio — Volvo GM Heavy Truck is gearing for a major tussle — mostly with Mack — for third place in the Class 8 market.

Officials are convinced that they must move up to third place in industry sales to achieve ultimate success.

"We are position-driven. We think that to be successful in the marketplace from a dealer point of view, we've got to be in the top three. We are planning capacity on that basis," said Terry Young, Volvo GM's marketing director.

The company's isn't particularly concerned about market share.

"If being No. 3 means you gotta have 20 percent of market, fine. If it means 17 percent, that's fine," Young added.

Volvo captured 11.51 percent of the market in calendar 1988.

Its goal is to produce 25,000 trucks a year and to avoid the peaks and valleys of U.S. market demand by balancing it off against Canadian and European export sales.

Volvo finished third in retail sales during the final quarter of calendar 1988. In December, it climbed into second place, displacing Freightliner.

In an uncharacteristic outburst during a press conference here, Thage Berggren, Volvo GM's usually staid president, said, "We're sending a clear message to Mr. Rupp. I hope he focuses on the Congress and the president."

Berggren was alluding to the fact that, as chairman of Daimler-Benz of North America Holding Co., Peter Rupp, who resides in Washington, is no longer involved in the day-to-day operations of Freightliner.

In calendar 1988, Volvo GM's 17,089 sales put the firm in fourth place behind Navistar's 33,808, Freightliner's 24,164 and Mack's 21,846 retail deliveries in Class 8.

Volvo GM, which has been and continues to be capacity-constrained, is not likely to reach its third-place goal until 1990-91.

Young said the company still must develop its Canadian market and also has to recoup the production capacity lost in the shutdown of the GMC plant in Pontiac, Mich.

That plant, which had been supplying Volvo GM with 25 to 28 trucks a day, went down in December. The company's new plant in Orrville, Ohio, is currently producing only five trucks a day and will not be up to full speed until the third or fourth quarter of this year.

Last year, the company expanded production at its other plants. Dublin, Va., output increased 50 percent, and Ogden, Utah, output increased 30 percent. It also expanded cab production at a separate Orrville plant.

It will have capacity to produce 93 trucks a day by the end of this year, according to Gene Tunila, vice president of manufacturing.

By 1991 or 1992, he expects production capacity to increase to 115 trucks a day, "probably by a combination of expanding the Ogden plant and adding a second shift at Orrville."

It is also putting a centralized inventory system for Class D and Class E parts into its Westerville, Ohio, central parts warehouse. Those are low-volume but critical parts.

The project is designed to provide timely delivery of those parts to the three assembly plants by having one central purchasing, warehousing and delivery operation to supply the plants.

Before, the plants bought these parts individually.

Volvo GM's customer order board for new models was a strong 6,700 units as of late January — enough to keep its Dublin and Ogden plants operating until April and the Orrville plant until May.

Officials also said:

- Some 140 of the current 200 dealers, or 70 percent, are exclusive Volvo GM outlets. The company will add 40 more dealers this year.
- The company plans to have enough flexibility at its plants so that each can turn out any model. It is "logistics oriented" and out to control "outbound transportation costs" because it spends more money on them than in direct labor costs, Berggren said.
- To that same end, Volvo GM uses a "family concept" for its parts. There is a 30 to 40 percent parts commonality from one model to another.
- There are no plans to give GM's medium-duty truck line to all Volvo GM Heavy Truck joint-venture dealers.

"I have my job here and am also a member of the (Volvo) worldwide management team. I can look you straight in the eye and say, 'I don't know anything about it,' " Berggren said.

More than 40 percent of Volvo GM dealers already sell the medium-duty GM models, Young estimated.

"About 40 percent of the (Volvo GM) dealer network were former GM dealers and with rare exception all of those (heavy-truck) dealers had the medium-duty line," he said. "Since then, we've added the medium-duty to some of what we would call the old Volvo White factory franchises."

Domestics push sales to record

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-truck manufacturers kicked off 1989 with a January record and a continuing gain in market share for domestic manufacturers.

Overall, the industry retailed 343,917 trucks in January, narrowly topping the previous monthly record of 340,807 set last January.

The domestic-based truck makers retailed 296,304 light trucks, up 4.95 percent from 282,323 a year earlier. They garnered 86.16 percent of the market, up from an 82.84 percent market share in 1988.

Foreign-based manufacturers retailed 47,613 trucks, off 18.59 percent from 58,484 a year earlier. Their market share declined to 13.84 percent from 17.16 percent in January 1987.

All the domestic-based manufacturers except Chevrolet had sales increases during the month, while all the foreign-based firms except Range Rover, had declines.

In the largest single truck segment, the full-sized pickup market, all the domestic manufacturers continued to do well with sales increases over a year ago.

GMC's 24,828 sales in January showed the largest percentage gain, a 23.49 percent increase over last year's 20,105. Its strong showing came partly at the expense of Chevrolet, since the two division's trucks are essentially the same.

Chevrolet's 89,372 sales were off 2.32 percent from 91,490 in 1988.

Ford's 107,680 sales were up 4.93 percent from 102,623 last year.

Dodge and Plymouth's 55,627 sales were up 7.91 percent from 51,550 in 1988.

Jeep's 18,797 sales were up 13.54 percent from 16,555 in like 1988.

Volvo GM expects strong sales

Maker also predicts shifts in buying patterns for heavy trucks

COLUMBUS, Ohio — Volvo GM Heavy Truck forecast a strong sales year in 1989. It also noted changes in different truck-buying segments and the increase in its own sales per dealer as a result of efforts last year.

Terry Young, the company's marketing director, said he anticipates industry retail sales of 66,000 to 70,000 units in the first half of the 1989 calendar year and 70,000 to 74,000 in the second half.

That would give the industry another strong year, somewhere between a conservative 135,000 and a high of about 145,000 sales, compared with 148,361 sales in 1988.

Looking ahead, Young predicted continued sales growth in the "for-hire" buyer segment. Volvo GM's definition of "for-hire" truck buyers includes both truckload and less-than-truckload operators who haul on a for-hire basis.

It counts such individuals by looking at R.L. Polk registrations and noting key words like "trucking," "freight cartage" or "transport" included with the registrations of vehicles, such as John Smith Trucking or Bill Brown Transport.

The for-hire buying group accounts for about 23 percent of industry sales, and Young expects that to rise to 30 percent over the long term.

"This growth will come about as the number of private and independent owners of trucks declines," he predicted.

The private-carrier buying segment, now accounting for about 33 percent of industry sales, is expected to account for only 26 percent in the future.

Private carriers are companies like Coca-Cola, Frito Lay and Kroger — wholesalers, retailers or manufacturers that principally own their own trucks to move their own goods.

Some of that segment's sales will move into the for-hire category and some into the full-service leasing category, Young predicted.

Sales to full-service leasing companies, which currently account for 22 percent of industry sales, are expected to increase to 26 percent.

Volvo GM includes any full-service leasing companies, including maintenance-type lessors, in that group. It includes companies like Ryder down to the smallest rental and leasing firms but excludes banks and finance lessors.

Independent truck operators are expected to continue to have difficulty competing. Their share of sales, currently at 17 percent, is expected to decline to 12 percent.

Government sales, including local, state and federal, account for 5 percent of the industry's total and are expected to continue at that level.

Meanwhile, Volvo GM's dealer efforts have paid off with greater volume per retail outlet.

Some 105 of its 200 dealers retailed 50 or more trucks during 1988, and 49 of those 105 sold more than 100 trucks, according to Larry Oliphant, Volvo GM vice president of sales and marketing.

To recognize dealers who sell more than 100 trucks a year, the company is forming the Century Club.

Oliphant said there are also 15 dealers now selling more than 200 trucks a year, including the company's volume leader, Westfall WhiteGMC in Kansas City, Mo., which sold more than 1,600 last year.

In terms of factory shipments, the Midwest, with wholesale shipments of 7,809 units, was Volvo GM's top sales region. A major factor in that was GMC's long-standing strength in the area.

The Northeast, with 4,100 trucks, was the second strongest region, followed by the Southeast with 3,800, the West with 1,900 and the Southwest with 1,800, Oliphant said.

The company's market share increased in all regions last year.

Electronic anti-lock brakes for Rockwell

TROY, Mich. — Rockwell International plans to introduce an electronically activated, anti-lock braking system using sophisticated, built-in diagnostics in 1990.

Rockwell officials discussed the new braking system with 15 of their dealers at a recent Dealer Advisory Board meeting.

The company also discussed new on-highway transmissions it is developing and a "next-generation" of drum brakes.

Separately, Rockwell's automotive electronics business announced development of a purchasing plan for truck fleet customers buying its Tripmaster trip-recording equipment and Tripfax software.

The plan is a conditional sales agreement administered by Chase Manhattan Leasing. For purchases of $25,000 or more, a three-year term is available to help North American motor carriers buy a new Tripmaster or upgrade their current Tripmaster system.

The financing plan offers 72-hour approval, according to Kurt Burmeister, director of sales and marketing for Rockwell's automotive electronics business.

The Tripmaster system consists of a trip recorder, software and major options to tailor information to a fleet's needs. More than 2,000 private and for-hire motor-carrier locations use the system.

Hyundai sets up arbitration program with AAA

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

GARDEN GROVE, Calif. — The introduction of the new Sonata sedan enabled Hyundai Motor America to reaffirm and fortify the service program developed for the Excel, its first entry in the U.S. auto market.

In a continuing effort to beef up the service program introduced in 1986, Hyundai is field-testing a consumer arbitration program it hopes to expand nationally, according to Lee Sawyer, service director.

"We are working with the American Automobile Association on the East Coast," Sawyer said. "We want the AAA to become our arbitration mechanism and the customer's arbitration mechanism."

The AAA Third Party Pilot Arbitration Program is being conducted in Hyundai's Eastern region, which includes Virginia, West Virginia, Pennsylvania, Maryland, Connecticut, Massachusetts, New York, New Hampshire, Vermont, Rhode Island, Delaware, New Jersey, Maine and the District of Columbia.

AAA will perform arbitration services in disputes involving Hyundai's alleged nonconformity, defect or deficient warranty performance and any consumer dispute arising from the service items covered by the company's 3-year/36,000-mile limited warranty from the date of delivery or as required by a state lemon law.

All decisions will be binding on Hyundai but not on the consumer. If the consumer is dissatisfied with the verdict, he/she can take the dispute to court.

AAA will not arbitrate cases involving non-Hyundai products, alleged personal injury or property damage, alleged fraud or other violations of the law, requests for awards of punitive damages or cases involving Hyundai vehicles imported into the United States by an individual or company other than Hyundai Motor America.

Nor will AAA handle cases involving any Hyundai vehicle sold or registered outside the United States, dealer-consumer disputes (sales), cases in litigation and cases previously handled by a dispute resolution mechanism.

Consumers will be notified of the arbitration mechanism through several sources, including a brochure that will be placed in dealerships and Hyundai's regional office. A toll-free AAA arbitration phone number is published in the brochure.

Sawyer said the six-month pilot program began Jan. 1. He said Hyundai hopes to "bring it across the nation between now and the end of 1990."

Sawyer said Hyundai selected AAA "because it has the automotive technical expertise" to arbitrate such disputes.

He said the Sonata was tested numerous times in the prototype stage to get it ready for the U.S. market.

The procedure includes hot testing, cold testing, quality analysis, technical analysis and "then the service side of the car sort of takes care of itself," he said.

"Then we followed that up with quality surveys," he said. "As a result, we went back to the factory three times during the preproduction stage and fed input, as seen through American eyes, as to what we would like to see changed and implemented in the final version of the Sonata."

To verify that production cars reflected U.S. input, Sawyer said, the vehicles were checked again at the port of entry.

At the dealership level, "where pre-delivery service is one of the things we can control," Sawyer said, service representatives visit each dealership at least once every three months and audit vehicles on the lot.

That information, too, is relayed to the factory, Sawyer said. "The next thing is to impart all this knowledge to dealership technicians." In the case of the Sonata, according to Sawyer, two technicians from each dealership participated in a technical training course at one of Hyundai's four regional training centers prior to introduction.

Training included an overview of Sonata technical features as well as proper diagnostic and repair procedures, technical videos and hands-on training.

Sonata courses were conducted by company training managers who studied at the Hyundai Product Development Center in Ulsan, South Korea, and also at Hyundai Motor America headquarters here. Those managers will continue to train additional dealership service personnel.

Hyundai also provides a telephone number technicians can use to contact service experts for help.

Special service tools and diagnostic equipment also were made available to dealers prior to the arrival of the Sonata.

"We worked with tool and equipment manufacturers to come up with national account pricing," said Sawyer, and passed the savings on to the dealers.

In addition, each dealership has received an ample supply of parts to help assure that customers will not experience delays, Sawyer said.

Hyundai now has three parts depots — Garden Grove, Calif.; Lithia Springs, Ga., and Cranbury, N.J. A fourth depot will be opened soon in Chicago, and construction is under way on a national parts distribution center in Ontario, Calif.

Sawyer said Hyundai has a 95 percent fill rate on parts orders and has an all-electronic warranty claim system.

"Given a clean sheet of paper when we started the company," he said, "we elected to have no paper in the system."

He said the all-electronic warranty claim submittal system results in rapid payments to the dealer. "We verify that the claim is accepted and approve payment within 24 hours after receiving the claim," he said. The dealer receives a month-end settlement statement via the parts account.

"We basically pay 87.5 percent of the warranty claims submitted by the dealers," said Sawyer. "The only thing we ask in return from the dealer is that we get value received for our warranty dollar. So we are pretty active in terms of expense control to assure that warranty doesn't cause the price of the car to go up."

Hyundai buyers receive one year's membership in the Cross Country Motor Club. A national toll-free hotline for assistance in infomation, trip planning service and emergency towing service is included.

"Another thing we have done to help service customer cars is to appoint alternate service locations in areas where we have no dealerships," Sawyer said.

"Those are independent service outlets, with towing capabilities, that are tied into Cross Country's network. We have outfitted them with shop manuals, a set of common parts. We (Cross Country) send the owner of the vehicle to the alternate service location for service in an emergency."

Sawyer said the average Hyundai dealer has 17 years' experience and has five other franchises.

"Therefore, when he brings people over from his other stores to open and run the new Hyundai store, they are experienced people," Sawyer said. "And this has shown up in the high customer satisfaction scores in the J.D. Power people-handling survey."

Shop volume dips 7% for November

But index climbs 2% for 11 months

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships fell markedly in November, but year-to-date results for the first 11 months of 1988 remained above year-earlier figures.

In November, shop volume fell 7.3 percent from results in November 1987, according to the Automotive News Service Index.

Shop volume for the first 11 months of 1988 was up 2.2 percent over 1987.

Service volume slipped during the second half of 1988 after a strong first half. Every month in the first half of 1988 showed a year-to-year gain over corresponding results posted in 1987.

Shop business in the second half of 1988 was mixed. Volume in August was up sharply, while service business dropped slightly in July and October. Business was up slightly in September.

A Southern Chevrolet dealer hypothesized that lagging new-car sales brought fewer customers to the service bays.

However, industry car sales were up 8.0 percent during November.

Other dealers have attributed sales declines last fall to a normal seasonal slowdown.

Shop parts sales (customer paid and warranty) fell more than any other indicator, declining 12.7 percent in November. Total labor sales (customer paid and warranty) dropped 9.4 percent; sales of all parts and accessories lagged 8.6 percent; gross profit on all labor, parts and accessories sales dipped 5.3 percent, and repair orders written slipped 0.7 percent.

Parts and accessories sales to off-premises customers fell 6.0 percent in November.

Gross profit on all labor, parts and accessories sales led year-to-date indicators with a 5.6 percent increase through November. Parts and accessories sales climbed 4.8 percent, and shop parts sales rose 4.6 percent.

Labor sales dropped 3.1 percent and repair orders written fell 0.7 percent.

Parts and accessories sales to off-premises customers through November outperformed the year-earlier figure by 4.9 percent.

SERVICE INDEX

92.7*

	Nov., '88 vs. Nov., '87	11 mos., '88 vs. 11 mos., '87
Gross Profit on All Labor and P&A Sales	−5.3%	+5.6%
Repair Orders Written	−0.7%	−0.7%
Total Labor Sales (Customer & Warranty)	−9.4%	−3.1%
Shop Parts Sales (Customer & Warranty)	−12.7%	+4.6%
Sales of All P&A...........	−8.6%	+4.8%

* Survey by Automotive News shows that dealers' service and parts business in November 1988 was 92.7 percent of business in November 1987. Service business in the first 11 months of 1988 was 102.2 percent of business in the corresponding period in 1987.

GM warrants replacement panels

General Motors service parts operations has announced a long-term corrosion warranty on its replacement sheet-metal body panels.

The GM parts operation is also certifying a network of service outlets to repair GM cars with GM parts installed by AC-Delco-trained technicians. AC-Delco is a sales activity of GM service parts operations.

GM has long maintained that its replacement sheet metal is far superior in fit, finish and corrosion resistance to aftermarket sheet metal, most of which is produced offshore. The new GM warranty is an apparent effort by the company to back its quality claims.

GM's new sheet-metal warranty covers the company's replacement sheet-metal parts against rust-through corrosion for as long as the customer owns the car on which the parts are installed. Most new GM cars carry a 6-year/100,000-mile corrosion warranty. The only exception is the Cadillac Allante, which has a 7-year/100,000-mile corrosion warranty.

The new replacement sheet-metal warranty starts March 1.

The previous GM replacement sheet-metal warranty covered parts for 90 days or 4,000 miles.

The new warranty covers both inner and outer GM sheet-metal replacement panels, whether installed by a GM dealer or by an independent shop, if the part is purchased through a GM dealer. GM will repair or replace a sheet-metal part that fails due to rust-through corrosion.

"Our new warranty supports GM's claim of offering superior fit, finish and corrosion resistance compared to parts made by non-original-equipment manufacturers," said Timothy O'Connor, GM service parts operations general sales manager for GM dealers.

GM has also certified about 250 independent service outlets as Delco-Tech Service Centers during the last few months and hopes to establish an additional 2,000 outlets during 1989.

The centers are qualified to repair GM cars after the warranty has expired when service is needed on carburetor, fuel injection, ignition and emission systems. They also can conduct diagnostic checks.

The centers have been established to supplement GM dealership service, not to replace dealer service, GM said.

"We realize that some GM owners turn to independent shops for service," GM said. "The establishment of these Delco-Tech centers helps assure the GM owner use of genuine GM parts installed by AC-Delco-trained technicians, leading to our goal of improved customer satisfaction."

SERVICE BRIEFS

Holley offers FI system to replace 4-barrel carb

Colt Industries' replacement parts division has issued its 1989 Holley Performance Parts catalog. The book lists a fuel-injection system that Holley said can replace its four-barrel carburetor. The unit bolts to Holley's four-barrel intake manifold.

Holley said it is possible to use the fuel-injection system instead of a carburetor because the universal mounting plate permits the use of either square or spread bore manifold openings.

Named Pro-Jection, the system consists of a throttle-body injection unit, an adjustable electronic control module and an in-line electric fuel pump.

The unit replaces the Rochester Quadra-Jet carburetor on General Motors' 305- and 350-cid V-8s, Ford's 302- and 351-cid V-8s and Chrysler's 318- and 360-cid V-8s.

Quaker State Minit Lube enters Ontario market

Quaker State Minit-Lube is entering the Canadian market via a joint venture with Peter and George Walsh, who formerly owned Automotive Lube Shops in southeast Ontario. The new partnership is called Minit-Lube Ontario.

Last month, Minit-Lube Ontario opened 16 Minit-Lubes in southeast Ontario in the former Automotive Lube Shops.

Jeffrey O'Neill is chairman of the venture. He formerly was president and chief operating officer of Quaker State Minit-Lube. Peter Walsh was named president, and George Walsh is secretary-treasurer.

Car dollars rise 5% in newspapers

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The nation's automakers and importers spent 5.2 percent more on newspaper advertising for cars in the first three quarters of 1988 than they did a year earlier.

The Newspaper Advertising Bureau said the auto industry, including factories, dealer associations and dealers, disbursed $521.3 million in the January-September period. That compares with $495.5 million during the same period in 1987. The spending numbers are projected for 125 markets and are collected by Media Records.

William J. Tausch, vice president of automotive marketing for the Newspaper Advertising Bureau in Detroit, said the bureau projected a 6 percent increase for the automotive category in newspaper spending in the 1988 calendar year.

The most dramatic increase among the three spending categories was in the dealer association segment. Dealer groups increased their total newspaper advertising expenditures 41 percent over the year-earlier period. Tausch said incentives and stronger associations fueled bigger ad budgets.

"Last year was an aggressive incentive year and incentives were more evenly dispersed from manufacturer to manufacturer," he said.

"I think associations enjoyed moving product and supporting factory programs," he added.

General Motors' dealer groups increased newspaper spending 80 percent during the first three quarters of 1988. GM is making a concerted effort to increase its share of advertising voice at the local dealer level.

Individual dealers spent 9.8 percent more on newspapers in the 1988 period than in 1987.

Factory expenditures on newspaper advertising were down 14.6 percent in the first nine months of 1988 compared with the same period in 1987. Factories spent $132.6 million in the 1988 period vs. $155.3 million a year earlier.

Most of the dip in factory expenditures was due to reduced spending by the importers. Importers spent 31.6 percent less on newspapers in the first nine months of 1988 than in the same period of 1987, while domestic makers maintained factory spending levels.

Importers as a group spent $48.9 million in the first nine months of 1988 compared with $71.5 million in the year-earlier period. Tausch said most of the decline came from European manufacturers, who have recently suffered sales declines. Domestic makers spent $83.7 million in January-September last year compared with $83.8 million in 1987.

Chrysler Motors' factory expenditures on newspaper advertising for the first nine months of 1988 dropped 63.2 percent. Chrysler spent $8.8 million in 1988 compared with $23.9 percent in 1987.

Ford Motor Co. spent $11.3 million on newspaper ads during the first three quarters of 1988, down 25.7 percent from $15.2 million in 1987.

GM was the only domestic automaker that increased its spending on newspaper advertising. GM spent $63.5 million during the first nine months of 1988, up 43 percent from $44.4 million a year earlier. Newspaper expenditures include car advertising for its five car divisions and corporate advertising.

In light-truck advertising, makers spent $18 million in newspapers in the first three quarters of 1988, down 39.2 from $29.6 million spent in the year-earlier period. Chevrolet was the top spender in the truck category with $7.2 million for newspaper ads in the January-September period of 1988.

Car sales decline 5% in January

Total is 718,616; domestics and imports share month's loss

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

January's combined domestic- and import-car sales trailed year-ago totals despite a surge in domestic deliveries in the final 10 days of the month and a large helping of consumer and dealer incentives.

Consumers bought 5.53 percent fewer cars in January than they did last year. January's final 10-day domestic-car sales gain of 5.25 percent was not enough to offset early- and mid-January 10-day domestic delivery declines.

Combined U.S.-built and import-car deliveries slipped to 718,616 units, compared with 760,684 in January 1988.

Although creative incentives — including cut-rate loan programs, special-interest-magazine-coupon inducements, free options and cash rebates — were in place, sales were flat.

"Sales were soft in January," said William J. Griffin III, president of Griffin Ford and Putnam Buick in Greenwich, Conn. "The buying mood of the public was one of caution. It takes place every year after the Christmas business. We should anticipate that sales will be soft. I feel everything will be better from Feb. 1."

This year, domestic carmakers retailed 509,760 units or 4.04 percent fewer than the 531,225 sold in January 1988.

Import-car deliveries declined 8.98 percent to 208,856 units, compared with 229,459 a year ago. Imports accounted for 29.06 percent of total car sales.

The average daily selling rate for the month was 28,744, or 5.53 percent below the 30,427 rate a year earlier. Both months had 25 selling days.

Honda, Hyundai, Porsche and Yugo reported import sales declines of 30-60 percent in January while gains of at least 20 percent were announced by Audi, BMW, Merkur and Peugeot.

Some car market shares were rearranged by several points in January. Ford Motor Co.'s market share rose 2.28 percentage points to 24.08 percent, while General Motors' share fell 2.24 percentage points to 34.17 percent. Chrysler Motors' total car share slipped a fraction of a point to 10.46 percent.

Among the major Japanese carmakers, combined import and domestic car shares also changed. Honda and Toyota each garnered a 6.55 percent share of the car market in January. However, Honda's share dropped nearly half a point, while Toyota's edged up a fraction of a point.

Nissan's car share inched up more than half a point to 5.11 percent, and Mazda's total car share rose nearly half a point to 2.99 percent.

The best gain in total unit sales was reported by Ford Motor Co. Its domestic and captive-import deliveries rose 4.53 percent over last January.

GM's combined car sales fell 11.17 percent, and Chrysler Motors' January domestic and captive import deliveries were down 7.03 percent.

The Japanese-based automakers delivered 0.38 percent fewer U.S.-built and imported cars in January than in the first month of 1988. European carmakers sold 14.64 percent fewer cars than they did a year ago, and Korean car sales fell 32.03 percent.

The seven U.S. carmakers began January with a slight 2.75 percent decline compared with the 10-day period a year earlier. Sales slid even further — 16.32 percent in the mid-month period. A gain of 5.25 percent in the final 10-day period could not recoup the earlier losses.

Ford was the only carmaker to report a domestic sales increase. Deliveries rose 3.63 percent. Sales of Lincoln Continental more than doubled last January's total, and Lincoln sales saved the month for Lincoln-Mercury.

Although GM's January domestic sales declined 11.08 percent, Cadillac sales were up 7.68 percent. John O. Grettenberger, Cadillac general manager, suggested that the new General Motors Acceptance Corp. SmartLease program, introduced Jan. 1, helped boost Eldorado and Seville sales for the month.

Chrysler Motors' domestic-car sales dropped 6.66 percent.

Three of the four Japanese transplant operations reported gains in sales of U.S.-built cars sales. Toyota and Mazda reported big increases. Toyota's U.S.-built car sales more than doubled, and Mazda's were up 90.54 percent.

Toyota reported last week that in January it sold its 9-millionth car since entering the U.S. market in 1957. The figure includes both imported and U.S.-built models.

Nissan sold 50.76 percent more U.S.-built cars in January than it did last year. Only Honda reported a lag in its sales of U.S.-produced cars. The January total was down 1.22 percent from a year ago.

For sale: Alabama Toyota outlet

Enterprising dealer strikes gold with ad flyer at NADA parley

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Hamp Griffin wanted to sell his Toyota store in Enterprise, Ala.

He tried business-for-sale classified ads in The Wall Street Journal, Automotive News and other trade publications plus daily newspapers in Miami; London; Amsterdam, Netherlands; and major metropolitan areas in the United States and Western Europe.

"As soon as people found out it was in Alabama, they lost interest," Griffin said. "I guess it's because the overall economy in Alabama is so bad.

"When people think about buying dealerships, they think of Florida."

Griffin, who also owns a Volvo store in nearby Mobile, was frustrated, but three days before the National Automobile Dealers Association convention in New Orleans, he had a brainstorm.

So he called the people who design his newspaper advertising and had them design a flyer offering to sell the dealership.

As a result, the flyer looked just like a newspaper ad announcing a special new-car sale, right down to the crossed-out blue-sky number of $650,000. "This week: $250,000," the flyer proclaimed.

Griffin had thousands printed in red ink and sent to New Orleans.

In New Orleans, Griffin paid workers at various hotels 50 cents a sheet to place the flyers outside the doors of NADA convention attendees.

It worked.

"I've got a buy-sell," he said in a telephone interview last week. Griffin said the prospective buyer is a three-store chain, and the two parties are still negotiating about some of the details, including whether the new owner will buy or rent the real estate.

"I sold the dealership just like I sell cars," Griffin said. "And I got my price."

Van alternative
The Luxury Transportation Motorcoach, designed as an alternative to conventional vans for use by hotels and livery services, is being prepared by Corporate Coachworks of Springfield, Mo. Starting with a Mercury Grand Marquis, the company lengthens and widens the car, providing seating for up to 10 guests and an oversized luggage compartment.

Chevy, Disney a team

Promotion ties Lumina intro, theme park

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet will use the power of Walt Disney Co. in what some say is the division's biggest and most important introduction — the launch of its three new Lumina vehicles.

Chevrolet announced last week a joint promotion with Disney to market the new vehicles to young families. The promotion will introduce the Lumina sedan, coupe and all-purpose vehicle and promote the entertainment conglomerate's new Disney MGM Studios Theme Park in Orlando, Fla.

Chevrolet will use animated Disney characters such as Mickey Mouse and Donald Duck in Lumina advertising. The new Disney-MGM Studios, which opens May 1, will be used as a backdrop. Disney will also show Luminas in ads for the new studio.

A sweepstakes promotion for both companies will award Lumina vehicles and Disney vacations. Consumers will sign up for the sweepstakes at Chevrolet dealerships. Dealers will receive more information on the promotion during a March 1 dealer meeting in Orlando.

Advertising for both companies will mention that Lumina is the official line of vehicles for the Disney-MGM Studios. All Chevrolet advertising will be created and handled by Lintas:Campbell-Ewald, Warren, Mich., which has been working with Disney on animation in the Lumina television spots.

"You have the premier family transportation company and the premier family entertainment company. The whole thing screams family. The matchup is excellent," said Steve McAvoy, Chevrolet passenger car marketing manager.

The first spots will air March 29 on the Academy Awards broadcast and will show all three Lumina vehicles even though only the sedan will be available at that time, McAvoy said. Chevrolet officials are hoping to launch the Lumina coupe in July and the APV in the fall.

Lumina print ads will break in April or May in general-interest magazines.

McAvoy said adverting for a cargo version of the APV will target light industry. A "Eurosport" version of the sedan, to be introduced later, will target enthusiasts.

Chevrolet expects the Lumina to be its highest-volume line in the 1990s.

AUDIT

FROM PAGE 1

said. "It (the check) is strictly a benefit."

But Chevrolet doesn't necessarily see things the same way.

Chevrolet General Marketing Manager Michael Erdman, who was shown copies of both the Saks Fifth Avenue gift certificate and the $2,000 check by Automotive News, said gifts to dealers do not qualify as administrative expenses.

He added that money given to dealers to attend a convention falls into a gray area and will have to be reviewed during the audit. If Chevrolet or GMC finds any misuse of advertising funds, it may ask the dealer group to pay for the program instead of using money from the assessment, according to officials from both divisions.

GMC Truck and Chevrolet are asking all their dealer advertising associations to submit financial data and proof of advertisements to verify that funds were spent appropriately. Data will be reviewed by field personnel and the division, according to a GMC dealer advertising representative.

The audit is to make sure each group spent at least 90 percent of its budget on advertising.

The remaining 10 percent may be used for administrative expenses, Erdman said. Administrative expenses can include off-site meetings, legal expenses related to advertising and the salary of an advertising director, he said.

Asked how Chevrolet planned to stop a misuse of advertising funds, Erdman said: "You really don't stop it. You'll always find people beating the system."

The advertising assessment program helped Chevrolet narrow its gap with Ford Division in spending on local advertising, Erdman said. He said the division is now almost even with Ford.

During the fourth quarter of 1988, Ford and its dealer groups were slightly ahead of Chevrolet in local television spending. Ford and its dealer groups spent $32.39 million on local television compared with $32.29 million for Chevrolet and its dealer groups, according to Broadcast Advertisers Report, a service that measures advertising on broadcast media.

By comparison, Ford and its dealers spent $25.27 million on local television during the fourth quarter of 1987 while Chevy and its dealers spent $22.36 million.

Observers said Chevrolet currently trails Ford in local television ad spending because ad dollars are generated on a per-vehicle basis and Ford is selling more vehicles than Chevrolet.

Robert Burger, Chevrolet general manager, said the division has not enjoyed the full impact of the 1 percent program yet.

"It's too early to tell," he said. "The monies are just now being generated and distributed to the dealer associations and their programs are just now starting to take effect. The bottom line is that it's going to have a tremendous impact."

Burger said that next to good products, the increase in dealer association funds will be the biggest factor in helping Chevrolet regain and maintain sales leadership.

Hugh Trenkamp, senior vice president and management director of the regional advertising group for J. Walter Thompson, Ford Division's national advertising agency, said Ford dealers in some parts of the country have been concerned about Chevy's new local advertising strength.

"We believe that the Chevrolet dealer associations are now outspending the Ford dealer associations in many markets," he said. "The 1 percent program has been discussed over the last 18 months. Some (Ford dealers) would like it, some wouldn't. It has put some pressure on (Ford dealers)."

J. Walter Thompson is the advertising agency for 45 of the 65 Ford Dealer Advertising Fund committees, Trenkamp said.

Chevrolet and GMC dealers receive 25 percent of their contributions to advertise their own stores.

Stocks reach 84 days as sales pace falters

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Combined inventories of U.S.-built and imported cars grew last month to equal an 84-day supply on Feb. 1.

Bitter weather in some areas may have kept customers out of showrooms in January, according to some dealers, thereby adding to the inventory bulge. January car sales slipped 5.53 percent below the year-ago total.

On Feb. 1, combined stocks of U.S.-built and imported cars totaled 2,406,310, 6.91 percent higher than the month-earlier total of 2,250,831, which equaled a 67-day supply.

Combined car inventories were 2.89 percent — or 67,512 units — fatter than on Feb. 1, 1988, when there were 2,338,798 cars in stock. That represented a 77-day supply.

On Feb. 1, there were 1,724,158 U.S.-built cars in stock, equal to an 85-day supply. That compares with a 67-day supply on 1,585,922 units in stock one month earlier.

U.S.-built car stocks on Feb. 1 were 2.82 percent higher than a year ago when there were 1,676,858 cars on hand, representing a sluggish 79-day supply.

Import-car stocks rose to 682,152 on Feb. 1, which represented an inflated 82-day supply. Last month, there were 664,909 unsold imported cars on hand, equal to a 67-day supply.

One year ago on Feb. 1, import-car inventories totaled 661,940 units, equal to a 72-day supply.

For the time of year, however, dealers told Automotive News that stock levels were stable and not too worrisome.

"We're still short on the very desirable models: the Grand Voyager and Voyager LE and the New Yorker Landau," said Lou Turiano, general sales manager for Bill Luke Chrysler-Plymouth, Phoenix, Ariz. He said his store is in good shape with a 60-day supply.

"Traffic was down," said Keith Vincent, new-car sales manager at College Park (Md.) Volkswagen. "Customers are recovering from the Christmas cold; we have a 60- to 75-day supply."

An 80-day supply is a little high for February, according to Steve Bird, new car and truck sales manager at Bud Young Chevrolet-Oldsmobile, Shellby, Ohio. He said his store is short on trucks.

"We're right where we want to be, with about a 45-day supply," said Jack Lebo, new-car sales manager, Miami Lincoln-Mercury. "We lost about 25 car sales during the riots. We're back on track now. Sables are profitable and any Continentals sell. Cougars are not selling, probably because of the problems reported."

Import makes with stocks that grew to 130 to 265 days included: Isuzu, Suzuki, Porsche, VW, Alfa Romeo, Yugo and all General Motors and Chrysler Motors captives.

All seven domestic producers reported higher days' supply numbers, and Toyota was the only one of the seven to reduce combined domestic and import-car inventories from Jan. 1.

GM stocks, including captives, totaled 967,069, equal to a 98-day supply. That was up 8.14 percent from 894,303 on Jan. 1, which equaled a 75-day supply.

Ford Motor Co.'s combined car stocks climbed 10.24 percent to 567,200, equal to an 82-day supply. A month ago, Ford had 514,500 cars in stock for a 70-day supply.

Including captives, Chrysler Motors had 307,116 cars in stock on Feb. 1. That represented a 102-day supply. Stocks were 2.58 percent higher than on Jan. 1 when unsold cars stocks totaled 299,403, equal to 85 days' worth.

Toyota was able to lower its transplant and import car stocks by 18 units to 52,110, equal to a 28-day supply. Last month it had 52,128 cars, representing a slightly lower 20-day supply.

Honda's stocks of U.S.-produced and import cars more than doubled during January. On Feb. 1, Honda's combined car stocks were 71,571, equal to a 38-day supply. Honda began last month with 32,674 unsold cars, equal to a meager 13-day supply.

Nissan's combined car stocks were 125,437, equal to an 85-day supply on Feb. 1. On Jan. 1, Nissan had 4.86 percent fewer cars in stock or 119,619 units, representing 80 days' worth.

Mazda also had higher U.S.-built and import car stocks on Feb. 1. Inventories rose to 53,059, representing a 62-day supply. At the beginning of January, Mazda had 44,431 cars in stock, equal to a 57-day supply.

The import car and truck stockpile on Feb. 1 grew to 845,733, representing an 81-day supply. That was up from 821,907 cars and trucks a month earlier, when there was a 67-day supply.

Feb. 1 import-truck stocks grew to 163,581 units — a 79-day supply.

Truck output highest ever for January

Truckmakers continued breaking monthly records as they opened the year with a January total of 381,272, the highest output ever for that month. It topped the previous peak of 336,734 in January 1979.

Last month's truck production was 19.90 percent above the December total of 317,999 and was 15.05 ahead of the year-ago month's 331,392.

The growing light-duty truck market has kept the truckmakers' weekly schedules a bit above 90,000 for several weeks; during the past couple years, the weekly schedules were in the mid-80,000 range.

Last week's estimated truck output of 90,364 dipped 5.31 percent from the prior week's 95,427 but increased 10.42 percent over the year-ago week's 81,834.

So far this year, 531,718 trucks have been assembled, 7.32 percent more than the 495,443 completed last year at this point.

Carmakers built 638,129 units in January, 12.45 percent more than December's 567,492 and 33.75 percent above the year-ago month's 477,103 when several plants were idled for inventory adjustment.

Last week's scheduled car production totaled 153,941, slightly below (0.80 percent) the previous week's 155,188 but 15.63 percent more than the year-ago week's 133,137.

Companies split last week's targeted production as follows:

General Motors, 48.30 percent; Ford Motor Co., 24.98 percent; Chrysler Motors, 12.41 percent; Honda of America Manufacturing, 5.37 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.14 percent; New United Motor Manufacturing Inc., 2.60 percent; Nissan Motor Manufacturing Co. U.S.A., 1.52 percent; Toyota Motor Manufacturing U.S.A., 1.26 percent; and Diamond-Star Motors, 0.42 percent.

Truck mark set in Canada, too

Canadian truckmakers set a January record while car output slipped to the lowest January total in six years.

Truck output of 86,281 for January not only topped car output for the month but surpassed the previous January high point of 81,115, which was reached in 1986.

January's truck build was 21.23 percent more than December's 71,174 and 17.11 percent above the year-ago month's 73,674.

Last week's scheduled truck production of 21,342 was slightly lower (0.22 percent) than the previous week's 21,389 but 14.77 percent more than last year's 18,596.

Car output last month totaled 80,125, the lowest January figure since the 75,937 built in 1983. Last month's car output was 33.99 percent more than December's 59,799 but 7.28 percent below the year-ago month's 86,420.

Automakers scheduled assembly of 22,247 units last week, 5.89 percent more than the prior week's 21,009 and 2.34 percent more than the year-ago week's 21,739.

GM tries 3-tiered car loans

Pilot charges according to risk

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

General Motors Acceptance Corp. is on the threshold of rewriting the way it writes auto loans.

GMAC, once considered to be among the country's most conservative lending institutions, has been regionally test-marketing a multi-tiered lending program that grades retail paper based on a buyer's credit worthiness.

The program is designed to attract more buyers who are good credit risks and better protect GMAC on loans made to buyers who are poorer credit risks.

The move will also allow GMAC to group the graded paper and sell it to investors.

GMAC said if testing is successful, it will take the program nationwide. Dealers participating in the pilots say that could be as early as March 1, when many of the current cut-rate-loan incentives expire.

The program met with mixed reviews during its two months of test marketing in Boston, Chicago, New York, Dallas and parts of New Jersey. Pilots may be running in other areas as well but GMAC declined to say where.

Some dealers polled think the plan will succeed in moving more vehicles. Others fear that it will lessen GMAC's traditional buyer quality and run retail paper costs too high.

Though some lending institutions have offered graded paper, this marks the first time one of the captive finance companies has tried the system.

. . . while the version with two fewer doors is a truck

U.S. tones down MPV tariff hike

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — In a partial reversal of a hotly disputed ruling by U.S. Customs, the U.S. Treasury Department last week said a 25 percent truck tariff applies to two-door sport-utility vehicles and cargo vans but not to four-door versions or vans equipped for passenger use.

It was a victory for European manufacturers such as Range Rover and Volkswagen and a partial win for Japanese makers looking to step up four-door sport-utility and van imports. Domestic manufacturers, who were pressing for the tariff on all vehicles in the class, were unhappy with the decision.

The Treasury said that four-door sport-utility vehicles and vans with side windows and rear seats that can hold at least two persons are passenger cars, and they will continue to be taxed at the 2.5 percent car rate. The announcement came after an intense six-week review of the Jan. 4 Customs ruling.

Officials of the Japan Automobile Manufacturers Association said four-door sport-utility vehicles and vans imported for passenger-use will count toward that country's voluntary export restraints.

The Treasury said of the 193,000 sport-utility vehicles and 45,000 vans imported last year, 42 percent were subject to the 25 percent truck tariff. As a result of the change classifying all two-door versions as trucks, the Treasury said 62 percent of a similar number of multipurpose vehicles imported this year would be subject to the tariff and will cost importers $83 million more in 1989.

The domestic manufacturers maintain that if all vehicles in the class were taxed as trucks, the Treasury would realize $500 million a year in extra revenue.

Deputy Treasury Secretary John McPherson said the government collected $324 million last year

More Yugo grief — maker plans termination

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEWARK, N.J. — The Yugoslavian manufacturer of the Yugo subcompact has notified Global Motors it intends to terminate its distribution agreement with Global's Yugo America unit.

But until Global's bankruptcy proceedings are concluded, Yugo maker Zavodi Crvena Zastava is assembling an interim management team to run the distributor firm through Impex Car Corp., its agent in the United States, a Zastava spokesman said.

Meanwhile, it was revealed in a U.S. Bankruptcy Court hearing last week that Norauto, an Ohio-based liquidator, essentially paid $1,500 each for the 5,000 Yugos it purchased from Global. Global's Yugo America subsidiary paid Zastava $2,100 for cars, which were sold to dealers for $3,500.

Norauto was seeking the court's permission to sell the vehicles, but Judge Vincent J. Commisa left in place a temporary restraining order putting the sale and other Global financial dealings, including Zastava's termination notice, on hold.

Yugo dealers have scheduled a Wednesday meeting to form a dealer committee to protect their interests, including some $2.5 million, mostly for rebate claims.

Zastava has agreed to back the car's warranty and Yugo America's obligations to dealers and to provide between $1 million and $1.5 million to keep Yugo America functioning for the next few weeks, according to lawyers in the case.

But beyond the contingencies forced on them by the bankruptcy, the relationship between Zastava and Yugo America appears strained.

Marcel Kole, acting chief executive officer for Yugo America, testified in Bankruptcy Court here last week that Zastava sent a termination notice some time before Yugo America and parent company Global Motors filed for Chapter 11 protection from creditors Jan. 30.

Kole testified that Yugo America contests the termination.

"We have received a document (from Zastava). We have not acknowledged that," Kole said.

Commisa said at last Tuesday's hearing that

Ron Tonkin is quickly moving on his promise to turn up the heat on auto manufacturers this year.

The new president of the National Automobile Dealers Association went public last week with the names of his first 205 "Rough Riders" — car dealers he hopes will provide the muscle in his new factory relations counter-offensive.

Tonkin said members of the group will meet with auto manufacturers primarily over three issues that have angered dealers: manufacturer subsidies of fleet sales; the use of customer satisfaction indexes; and the instigation of "dealer improvement programs," which Tonkin claimed are "efforts to strong-arm dealers into higher sales."

Among those listed as Rough Riders are Penske Corp. Chairman Roger S. Penske; Mark Eddins, owner of the second largest Chevrolet dealership in the country,

Big 3 profits set record with overseas help

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

While the Big 3 last week reported record sales and net income for the fourth quarter and year, their combined North American profits were flat compared to 1987 and fell almost $1 billion from 1986.

Combined overseas profits climbed steadily from $100 million in 1986 to $5.0 billion in 1988. The weaker dollar has helped the U.S.

Chrysler is about to decide whether to produce a version of the V-10-powered Viper show car

AUTOMOTIVE NEWS/JOE WILSSENS

VIPER: *Shelby says Chrysler is near decision on whether to produce hot little sports car*

By Richard Truett
SPECIAL CORRESPONDENT

DAYTONA BEACH, Fla. — Specialty-car builder Carroll Shelby said Chrysler Motors executives may decide within days whether to produce the sporty show car called Dodge Viper.

Chrysler Motors President Robert Lutz and Vice President of Vehicle Engineering Francois Castaing are "makin' noises like they want to build it," said Shelby, who has produced a number of souped-up car lines with Chrysler, starting with the 1983 Shelby Charger.

"The volumes haven't been defined," Shelby said. "Where we would build it hasn't been defined. None of that stuff has. I'll probably be back there (Detroit) in the next 10 days and we'll get into that."

Shelby was in Daytona Beach Feb. 9 to deliver a speech at the National Conference for Automotive Technology.

Asked what he thought the chances were for the Viper going into production, Shelby said, "I wouldn't want to make that prediction right now. They're doing a few studies back there to see if they want to produce it. I'd like to see it built, but I'm not so sure that our little company out in Whittier, Calif., is capable of building it, especially if they want to do a volume thing like the Corvette is."

The styling of the Viper, which debuted at the Detroit auto show last month, has much in common with the Cobras that Shelby created with Ford Motor Co. in the 1960s. But the similarities don't stop with design. He cited "a big ol' pushrod engine, probably a production transmission, probably a production rear end and mechanical gauges so that we can keep costs down on it."

From February 1962 to December 1966, Shelby modified 1,011 British-built AC Cars sports cars by equipping them with 260-, 289-, 427- and 428-cid Ford engines and racing equipment. Today some of those cars in top condition fetch nearly half a million dollars at auctions. They are among the fastest cars ever sold and are arguably Shelby's most famous products.

"We believe it should be an American-type sports car," Shelby said of the Viper. That has been the mission of the previous Dodges that Shelby Automobiles has modified. He predicted that people are going to be surprised at how "forward thinking" Chrysler is with some of its 1990s models.

Irregularities surface in Chrysler audit

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. has placed its administrative services office under the supervision of the company controller after disclosing last week that an internal audit uncovered irregularities in its facilities management group.

Facilities management is responsible for maintenance of Chrysler's headquarters and is one of three operations in the administrative services office.

The company also has moved its special security operation out of administrative services and placed it under the supervision of the company's general counsel.

The internal company investigation involves allegations of fraud within the facilities management operations, according to a source familiar with the probe. The source added the probe covers dealings with outside contractors and involves less than $500,000.

Four to six mid-level managers are affected, the source said, indicating that the affected employees are expected to lose their positions as a result of the investigation.

"Chrysler, like most companies, routinely conducts audits of its internal operations," a company statement said. "For several weeks, the company has been auditing its facilities management operations. This audit was begun after its internal control systems spotted some concerns."

In 1988, Chrysler created an office of ethics that permits employees to anonymously report alleged improprieties. "The internal control systems worked and the problem has been solved," a spokesman said. "There is no law enforcement involvement of any sort."

Chrysler Corp. Chairman Lee Iacocca issued an open letter to employees, describing the incident as "an isolated situation involving a tiny number of people."

"No matter how small the number of people or dollars involved, Chrysler will not tolerate unethical behavior that jeopardizes the hard work we've all put in to make this company a success," Iacocca said.

Dickinson, Wright, Moon, Van Dusen & Freeman, a Detroit law firm, is handling the probe.

Taiwan-built Justy may come to U.S.

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Fuji Heavy Industries is looking at Taiwan as a possible export base for up to 12,000 Justy models per year for the U.S. market.

Senior Managing Director Akira Soejima said the recent reorganization at Subaru of America was intended to improve communications between Fuji's three main production bases that will be in operation by the end of this year.

In addition to the operation in Gunma Prefecture in Japan, the Subaru-Isuzu Automotive Co. joint-venture plant in Indiana is scheduled to begin production this fall, and the plant in Taiwan will begin operations in May.

Initial production plans at the Taiwan plant call for 1,000 units a month of a 1.2-liter Domingo class van, an additional 1,000 units of a one-liter truck and 1,000 units a month of the 1.2-liter Justy.

If volume from the Japanese base is not sufficient for the U.S. market, Soejima said, the Taiwan plant would have the capacity to add 1,000 Justy models per month for export to the United States, bringing the plant's annual capacity to 48,000 units.

The company's three-plant, three-country setup is complex and requires better communication, Soejima said.

Soejima is one of two members who will be added to the Subaru of America board when it is expanded from 10 to 12 seats within a month. The position of vice chairman also will be established at that time, a post Soejima described as a kind of symbol.

But not a symbol of more control from Fuji, according to Soejima. From time to time, he said, the people at Subaru of America may think they are in a separate organization. "But we are in the same group together," he said.

Although Fuji recently purchased $20 million in preferred stock from Subaru of America, its stake in the company remains at 49 percent and that will not change, Soejima said. Fuji is not looking for more control of the American operation, he said. The preferred stock purchase was intended to help Subaru of America strengthen its financial position, he said.

Other sources have said Fuji has been negotiating to get an Isuzu vehicle for sale in the Subaru channel. But Soejima said it is still too early to talk about receiving another model. If Subaru of America should make such a decision in the future, that will be its decision as an independent company, he said. Fuji and Isuzu have shared some models in the Japanese market.

For the time being, Subaru will concentrate on three series, the Justy, Loyale and Legacy, in the United States, according to Soejima. There is an interest in a sport-utility vehicle or minivan, but at the moment there is no possibility of production, he said.

Fuji's interest in setting up production in France has been delayed, primarily because of uncertainty over the European situation and the demand for 80 percent local content that the French raised in opposition to Nissan's British-built Bluebird. The European Commission's decision on that issue is pending.

If Justy booms, Taiwan may answer

Soejima said Fuji is not in a hurry on the French project because a new model of the Leone-type vehicle would be required for a production start-up, and the Leone isn't due for a revision for another year or two. Fuji is now looking at the possibility of production at such a site in 1992 or 1993, he said.

The original plan for a French production site called for volume of less than 30,000 vehicles per year, but Fuji has increased that estimate to 48,000.

Fuji has had discussions in China, along with General Motors, about possible production there. The Chinese apparently have been looking for a Japanese and a Western partner to form a joint venture. However, those talks are apparently stalled, Soejima said.

Big rise predicted in Canada's output share

By Alex Law
STAFF CORRESPONDENT

TORONTO — Canada is on the way to providing 20 percent of all North American vehicle production in the next five years, according to a leading Canadian auto analyst.

Dennis DesRosiers also predicted that none of Canada's automotive assembly plants will close in the event of a North American overcapacity situation. His remarks came during a Financial Post conference on the Canadian auto industry here last week.

Speaking at a session on quality, productivity and profitability, the president of DesRosiers Automotive Research said, "Canada has been gradually increasing its share of North American vehicle production from under 10 percent in the 1960s to current levels of about 14-15 percent."

He added that "simple mathematics tell me that, if the markets hold, Canada will have at least 20 percent of North American production within three to five years."

As for an overcapacity situation, DesRosiers downplayed the chances of it ever happening.

"I think this issue is overplayed in the industry," he said. "Essentially, the adjustment mechanisms are working. Inefficient plants have been closed, exchange rates have blunted the growth of imports and indeed imports are falling."

He said, "We do not have to close 18 to 20 plants as some predicted. Indeed, there may only be one or two more vulnerable plants in North America and none, I believe, in Canada.

The only Canadian sites that might be vulnerable in the event of an extreme overcapacity situation, DesRosiers said, are General Motors' plant in Ste. Therese, Quebec, and Ford's plant in St. Thomas, Ontario.

DesRosiers received support for his prediction that no Canadian plants would close from John H. Hammond Jr., a managing partner of J.D. Power and Associates, a market research firm in Agoura Hills, Calif. Hammond qualified his remarks, noting that quality of production is the critical consideration when it comes to closing a plant.

DesRosiers's claim that the 20 percent level would be "very good news for those in the industry" did not apply to everyone at the conference. UAW President Owen Bieber, when asked how he felt about Canadian auto workers building 20 percent of North America's vehicles, said, "I don't like it one bit."

Bieber also told the conference that he hasn't made up with Canadian Auto Workers President Robert White. He said they haven't spoken since the Canadian branch broke away from the UAW in 1984.

He said officials from the two unions are in regular contact, but he didn't know when or if a high-level rapprochement was possible.

Bieber reminded the audience that the UAW represents a local in Wallaceburg, Ontario, whose membership is growing.

Bieber then moved quickly to dull any possible edge management could take from the unions' animosity: "I can tell you this — since this is a management function — that because we have some differences, that doesn't mean you have an advantage with one or the other."

Truck sales at peak

Light models set record; others strong

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic truck sales set a record in January as light-duty models reached an all-time high and most of the medium- and heavy-duty segments turned in exceptionally strong performances.

Overall, the industry retailed 367,691 light, medium and heavy trucks in January, edging last year's 362,676, the previous record, by a slim margin.

The light-duty Class 1-3 segment accounted for a record 342,323 sales during the month, up a scant 0.36 percent from 341,087 a year earlier.

Medium-duty Class 4-7 sales of 14,296 trucks were up a hefty 17.42 percent during the month from 12,175 a year earlier.

All medium segments except Class 6 showed gains for the month.

Heavy-truck manufacturers have been talking about their strong backlog of orders, and January confirmed Class 8's abiding robustness.

The heavy segment retailed 11,072 trucks, up 17.61 percent from the year-ago's 9,414.

All the major Class 8 manufacturers showed solid gains in January, though the numbers continue to be somewhat distorted because of Volvo GM Heavy Truck's lack of production availability.

Navistar and Freightliner continued to lead the segment. They also finished first and second, respectively, last year.

Navistar's sales of 2,754 Class 8 models were up from 2,599 a year earlier. Freightliner's sales of 1,940 were up from 1,741 in the year-ago period.

Paccar's Kenworth and Peterbilt, which combined for a sensational year in 1988, continued to do well in January. Kenworth jumped to third place from fifth for all of 1988, and Peterbilt was fourth after finishing sixth for all of 1988.

Kenworth retailed 1,428 trucks in January, up from 1,011 a year ago. Peterbilt retailed 1,399, up from 897 a year earlier.

Mack had a solid gain with sales of 1,208 Class 8 models, up from 1,066 in 1988.

Volvo GM still has to recoup the production capacity it lost with the shutdown of its GMC plant in Pontiac, Mich. It retailed 1,150 Class 8 trucks in January, up from the 948 Class 8 sales recorded for Volvo and GM in the Class 8 market last year.

Ford also had a very respectable gain in January. It retailed 1,042 Class 8 models, up from 855 in the year-earlier period.

World's big-truck makers hike sales; Volvo now 2nd

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Last year was a good one for the world's top 10 heavy-truck manufacturers.

They all increased their factory sales, though some gained a lot more than others.

The sales data for 1988 was compiled by Volvo Truck from various international sources. It is still preliminary, though officials expressed confidence in its accuracy. Worldwide sales totaled 379,000 last year, compared with 333,000 in 1987. Sales are rounded to the nearest thousand.

Volvo's interest in the sales data is obvious. The merger of its U.S. heavy-truck operations with General Motors' enabled it to leap-frog Renault and become the second-largest Class 8 heavy-truck producer worldwide.

The Daimler-Benz group, including Freightliner in the United States, consolidated its first-place standing. It is in no danger of being unseated from first place in the near term.

Renault, with the strengthening operations of Mack in the United States and improvements in its other worldwide operations, shored up its lead over fourth-place Navistar International. Renault owns 42 percent of Mack's stock.

Among the independent U.S. manufacturers, Navistar and Paccar continued to show good gains, though Ford in 10th place had only a marginal gain in factory sales.

Navistar and fifth-place Paccar kept their lead over Scania, Iveco, Hino and Daf, which finished sixth through ninth, respectively.

Early-February sales plunge 17%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

In the first 10 days of February, sales of U.S.-built cars fell 17.79 percent below the total for the year-ago period.

They also fell 36.94 percent below last month's final 10 days.

Highly erratic is how automotive analyst, Michael Luckey of Luckey Consulting Group, Cresskill, N.J., described the pattern.

Sales shot up in the final 10 days of January before plunging in early February. Luckey suggested that "all the car companies are doing with these 10-day totals is borrowing numbers from the future."

Offering a different viewpoint was L. Ray Windecker, Ford Motor Co. research and analysis manager, who said, "Year-ago early February sales were well above trend. A sales decline was expected as a logical occurrence." However, he said, 10-day sales follow a "saw-toothed pattern."

Among the eight domestic carmakers, which now include the Mitsubishi-Chrysler Diamond-Star joint venture in Normal, Ill., only the four Japanese transplants sold more cars than last year. Each of the Big 3 reported a decline.

Early February sales of U.S.-built cars totaled 157,849, compared with 192,001 in the Feb. 1-10 period a year ago.

The early February total also dropped 88,957 units below the final 10 days of January 1989, when 246,806 cars were delivered.

The average daily selling rate in early February fell to 17,539 vs. 21,333 last year. There were nine selling days each year.

Toyota sold nearly three times as many U.S.-built cars as it did last year, and Mazda's sales soared 86.89 percent. Toyota now produces cars at two U.S. sites, and Mazda's Michigan plant is in full operation.

Nissan delivered 27.37 percent more cars in the Feb. 1-10 period this year, and Honda's sales rose 17.19 percent.

Mitsubishi, which began selling U.S.- made Eclipses produced by Diamond-Star in January, delivered 358 cars in early February.

Ford Motor Co. reported the slimmest 10-day loss. Its sales were down 9.53 percent.

General Motors reported that Feb. 1-10 car sales fell 23.04 percent below last year's comparable 10-day period. Chrysler Motors' 10-day car sales fell 30.91. percent.

U.S. light-truck sales dipped 10.96 percent to 93,426, down from 104,920 a year ago.

Combined sales of U.S.-built cars and light trucks were 257,275, down 15.37 percent from last year's 296,921.

DOMESTIC SALES

Trucks lead Canada to 1988 sales gain

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Despite a booming truck market last year, a drop in imported-car sales held Canada's overall vehicle sales to a 2.48 percent increase over the 1987 total.

Combined domestic and imported car and truck sales totaled 1,537,986 in 1988, compared with 1,500,809 a year earlier.

Canadian dealers sold 1,049,898 domestic and imported cars, compared with 1,054,708 in 1987, a 0.46 percent drop. Domestic-car sales increased 29,552 for the year, while imports dropped 34,362.

A 13.36 percent rise in December car sales helped improve the domestic lot. GM led the monthly gain, posting an 11.21 percent increase. Ford followed with an 8.58 percent rise while Chrysler was up 4.20 percent.

For the year, Ford was up 10.02 percent, selling 201,240 domestically produced cars, compared with 182,912 in 1987. Chrysler had sales of 149,604, up 5.19 percent over 1987.

Market leader GM slipped less than 1 percent, retailing 352,203 domestic cars last year, compared with 355,691 in 1987. GM's imports, however, were up 16.70 percent to 27,386 units, compared with 23,468 in 1987.

The importers, however, did not fare so well. Sales of imported cars were down 14.81 percent in December and 9.55 percent for the year. December's losers among the volume sellers were Nissan, down 47.86 percent; Hyundai, down 29.44 percent; and Toyota, down 9.95 percent. Volkswagen, meanwhile, was up 18.63 percent.

For the year, Toyota managed to stay 2.40 percent ahead of 1987, selling 70,400 cars vs. 68,753.

Losing sales during calendar 1988 were Hyundai, down 38.77 percent, followed by Nissan, 18.13 percent; and Volkswagen, 14.27 percent.

Luxury imports also lost ground last year compared with 1987. Mercedes-Benz sales were off 4.13 percent; Saab, 16.47 percent; and Jaguar, 19.02 percent. Overall, total import-car sales were down from 359,852 in 1987 to 325,490.

On the truck scene, combined domestic and imported truck sales totaled 488,088 for the year, up 9.41 percent over 446,101 in 1987.

In December, GM's domestic truck sales were up 19.45 percent over December 1987, while Chrysler increased 11.62 percent. Ford was off 13.24 percent.

For the year, domestic trucks also showed good strength. Chrysler Motors sales, reflecting strong demand for minivans and Jeeps, recorded a 16.70 percent increase over 1987. GM was 11.94 percent ahead of 1987 while Ford was up 4.14 percent.

Among the volume truck importers, Toyota posted a 49.89 percent gain in December over the year-earlier month, while Nissan suffered a 53.91 percent loss.

Import-truck sales for the year were up 2.95 percent to 53,485 units, compared with 51,952 in 1987. Nissan's truck sales, however, slipped 26.23 percent.

Punitive damages restored in Audi runaway

By Helen Kahn
SENIOR CORRESPONDENT

A three-judge panel of an intermediate New Jersey appellate court has reinstated punitive damages of $100,000 against Volkswagen of America in an Audi 5000 unintended-acceleration case.

The case, Gibbs v. VWoA and Bell Porsche-Audi and Harold Horowitz, is the first Audi 5000 case in which VWoA has faced punitive damages.

The panel, in reinstituting the damages, found without merit VWoA's arguments that the trial judge had improperly allowed into evidence VWoA recall notices, VWoA internal memoranda and NHTSA documents.

The appellate panel also found without merit VWoA's claim that the jury selection process had been tainted by adverse publicity.

A spokesman for VWoA said it will appeal for a rehearing before the full appellate division of the New Jersey Superior Court and, if necessary, will consider appealing to the state Supreme Court.

An Audi spokesman told Automotive News that the three-judge panel had hopelessly confused "sudden acceleration, unwanted engine power and simultaneous actuation of gas and brake pedals" and had also blurred the differences between pre-1984 and post-1984 Audi 5000s.

The case stems from injuries incurred by Germaine Gibbs and her three children when a 1979 Audi 5000 driven by Harold Horowitz crashed through a brick wall into the Gibbs apartment.

The lower court jury awarded Gibbs $14,000 in compensatory damages and also awarded $100,000 in punitive damages and assessed 80 percent of the blame to VWoA and 20 percent to the driver. But Judge A. Donald McKenzie eliminated the punitive damages since he did "not believe a reasonable jury could find that Volkswagen did not move on this problem and try to ascertain the cause and correct it."

The accident occurred between the time VWoA told NHTSA that it would make its first recall to adjust the height and space between the gas pedal and brake pedal and when dealers were ready to make the fix.

James Hely, attorney for the plaintiffs, used NHTSA documents to assert that VWoA knew earlier of Audi 5000 problems with "simultaneous actuation" and had delayed recalling the vehicles. But McKenzie — while admitting a possible VWoA "delay" — said punitive damages depended on a "type of intent to cover it up, conscious disregard, reckless indifference, etc.," which he did not find in VWoA's conduct.

But the Superior Court's appellate division reviewed not only NHTSA documents but depositions taken from VWoA employees as well as internal VWoA memos referring to the problem as early as 1979 and 1982.

A letter sent by NHTSA to VWoA in August 1983 noted that simultaneously hitting of gas and brake pedals in a 1981 and a 1982 Audi 5000 resulted in acceleration whereas when "24 domestic vehicles were tested in the same manner, all of them remained stationary."

The judges also noted that VWoA's quality assurance department was not involved in "investigating sudden unwanted acceleration in Audi 5000 cars" since the "product liaison group" (part of VW's legal department) was "created to handle the situation."

After reviewing that evidence, the three judges decide that McKenzie erred, and while they stopped short of finding anything "wantonly reckless or malicious" on VWoA's part, they were satisfied that a "jury could reasonably have concluded that Volkswagen was guilty of deliberate acts or omissions with knowledge of a high degree of probability of harm and reckless indifference to the consequences."

Bendix teams with Hyundai

MORRIS TOWNSHIP, N.J. — Allied-Signal's Bendix safety restraints division has formed a joint venture with Hyundai Cement Co. to supply air-bag and other passive-restraint systems to Hyundai Motor Co.

A spokesman for Allied-Signal declined to disclose how the joint venture will be capitalized except to say that Bendix has a minority stake. Sales are expected to reach $90 million annually in four years.

The joint venture will supply more than 250,000 seat-belt systems to Hyundai in South Korea for its 1990 vehicles and nearly 900,000 systems — a majority of Hyundai's domestic and export passive-restraint requirements — by 1993.

The company will design, manufacture and produce the air bags. Bendix will provide the licensing and technology for the venture.

Construction will begin this spring on a 75,000-square-foot manufacturing facility in Mun Mag, South Korea. The facility will employ 100 workers, increasing to nearly 500 by 1992.

16,800 '89 cars recalled by GM

DETROIT — General Motors is conducting safety-related recalls of about 16,800 compact and mid-sized 1989 cars for problems with the fuel tanks and fuel lines.

The problems were discovered at the factory, and GM said it is not aware of either of the recall conditions occurring in customers' cars.

The recalls involve 13,000 Chevrolet Cavalier, Corsica and Beretta; Pontiac Sunbird; and Buick Skyhawk models. Over time, normal pressure cycling of the fuel tank may cause a small crack in the tank, resulting in a fuel leak. Dealers will replace the tank if necessary.

Also affected are 3,800 Buick Regal and Pontiac Grand Prix models. The cars may have been built with a fuel return line that could leak in the area of the fuel tank. Dealers will replace the fuel return pipe assembly on the cars.

Welcome home, Lou Lou Fusz Jr., recently named 1989 Time Magazine Quality Dealer of the Year, is greeted at the St. Louis airport by family and friends. Dolores Schaper, controller for Lou Fusz Automotive Network, pins a boutonniere on Fusz as he returns from the National Automobile Dealers Association convention in New Orleans, where he received the award.

Nissan cuts print ads, targets TV

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — Nissan Motor Corp. in U.S.A. canceled most of its $35 million 1989 magazine advertising schedule and said it will shift the money to spot television.

The sudden move, which caught affected newsweekly, lifestyle and business magazines by surprise, is an effort to increase Nissan's presence in a single medium and coordinate national advertising with regional campaigns, said Terry Foutz, national car advertising manager

Car and truck enthusiast magazines, which Foutz described as appealing to those "closer to the buying decision" than other magazines, are not affected.

Sports Illustrated is one weekly that while losing its schedule of product-oriented advertising retains a series of motor sports-oriented Nissan ads.

Japanese automakers are stepping up demands on U.S. sales subsidiaries as volumes shrink and margins — both dealer and factory — tighten, analysts say.

"I think (U.S.) Nissan executives have this year to prove themselves," said Christopher Cedergren, senior analyst for J.D. Power and Associates, Agoura Hills, Calif.

Foutz said the change was not an effort to dress up the U.S. sales arm's bottom line, which was battered by heavy use of cash-back incentives in the first part of the model year.

"The total advertising budget is unchanged," Foutz said. "We'll spend all of it."

Advertising Age, a Crain Communications publication, estimates that budget at $280 million — $200 million in national advertising and $80 million for regional spending formerly controlled by Nissan's dealer ad associations.

Nissan has set very agressive sales goals for 1989 and the shift is part of an effort to focus advertising to reach those goals, he said.

Referring to last fall's introduction of new-generation Maxima and 240-SX models and upcoming introductions of the new 300-ZX and Axxess models, he said, "We have an opportunity to do well this year. We intend to make the most of that opportunity."

The magazine cutback should not be viewed as disillusionment with print advertising — nor as an attempt to bludgeon magazines into rate reductions or other massive concessions, Foutz said. It does reverse a sharp increase in magazine buys last year when Nissan spent $36 million, compared with $19.6 million on magazines in 1987.

Once Nissan and ad agency Chiat/Day had decided to put more weight behind television, Foutz said print was the only medium with a large enough budget to supply the money needed to beef up television spending. He said television was favored over print in boosting Nissan's ad spending because print is less flexible, requiring lead times for materials of up to 90 days.

Cami workers OK pact at Canada plant

By Alex Law
STAFF CORRESPONDENT

INGERSOLL, Ontario — Workers at Cami Automotive, the General Motors-Suzuki joint venture, overwhelmingly approved a contract negotiated by the Canadian Auto Workers union.

About 80 percent of the 225 workers voted for the contract. It [illegible] the plant that will build the [illegible]ki Sidekick/Chevrolet Tracker [illegible] utility vehicle and Suzuki [illegible]hevrolet Metro subcompact [illegible] Canadian versions of the [illegible] be sold as Chevrolet Spri[illegible]nd Pontiac Firefly.

GM, Suzuki and the CAW formally agreed last October that the Cami workers should be represented by the union, although Robert White, CAW president, had worked out an agreement in principle with the company in 1986.

The contract was effective immediately after the vote and runs until September 1992.

A production worker will start at $13.44 an hour ($11.33 U.S.) and will be receiving $18.71 ($15.77 U.S.) by the end of the agreement. The skilled trades will start at $18.19 ($15.33 U.S.) and go to $22.24 ($18.74 U.S.). The workers will receive a full cost-of-living allowance with the same payout as the Big 3.

Production at the plant is expected to begin in April, with the number of workers reaching about 2,000 by October 1990.

TRW purchases air-bag maker

CLEVELAND — TRW continued its thrust into the safety restraint business by announcing it has reached an agreement to acquire Talley's air-bag unit for $85 million, plus royalties on the technology to be paid over 12 years.

Talley, based in Mesa, Ariz., is a supplier of driver-side air-bag modules for automakers. The business will become a part of TRW's occupant restraint systems unit, a supplier of seat belts and air-bag systems for the industry.

A TRW spokesman said the company expects to finalize the acquisition by March 31. In 1987, the two firms signed a long-term contract for Talley to supply TRW with 100 percent of its requirements for driver-side air-bag modules for several vehicles.

TRW manufactures crash-detecting sensors, diagnostic units and front passenger-side air-bag modules. TRW sales for passive and active safety restraints in 1988 were $550 million.

"We expect 65 percent of the cars produced for model-year 1994 will have air bags or complete air-bag systems," said the spokesman.

The company expects its sales for all types of safety restraints to be about $1.9 billion by 1993.

Code-Alarm earmarks $5 million for takeovers

MADISON HEIGHTS, Mich. — Code-Alarm, a maker of vehicle security systems, has received a $5 million revolving credit line from Comerica Bank-Detroit.

The company said the money will be used for making acquisitions.

Trade gap widens in November

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks increased 0.7 percent last November due to a surge in truck imports from Canada, coupled with a drop in U.S. truck exports to that country.

November's increase in the automotive trade deficit follows a 3.5 percent decrease in October.

Comparing the 12-month period ending Nov. 30, 1988, with the year-earlier period, the automotive trade deficit actually declined 3 percent, standing at $43.5 billion, down from $44.8 billion.

The 12-month figure reflects a 3 percent decline in the number of vehicles imported to the United States, while exports jumped 19.3 percent.

For the month of November, however, U.S. Commerce Department figures show a trade deficit for passenger cars and light trucks of $3.94 billion, compared with November 1987's figure of $3.91 billion.

Total car and truck exports had a value of $941.6 million during the month while monthly car and truck imports were valued at $4.882 billion.

Passenger-car exports reached 69,735 vehicles with an estimated value of $810.2 million in November. Light-truck exports for the month totaled 11,634 vehicles with an estimated value of $131.4 million.

Passenger-car exports were up 270.5 percent to Japan and 68.0 percent to nations labeled "others" by the Commerce Department. Passenger-car exports to "others" totaled 18,036 units for the month.

On the import side for the month, Japan continued to show a downturn in the number of cars shipped to the United States, but the value of these shipments increased. Both the value and quantity of truck shipments from Japan declined, however.

Total car and truck imports from all nations had a value of $4.88 billion in November, down 1.2 percent from $4.94 billion in November 1987. There were 477,049 finished vehicles imported to the United States in November 1988, compared with 496,307 vehicles in November 1987.

Imports of passenger cars reached 409,216 units for the month with a value of $4.35 billion. Light-truck imports totaled 67,833 units, with a value of $527.4 million. The value of imported trucks increased 21.5 percent in November while shipments declined 1 percent.

Japanese-car imports dropped 3.3 percent for the month but the value of the shipments increased 6.3 percent. Japanese-truck imports were off 15.1 percent and their value was down 1.9 percent.

Japan shipped 212,784 cars to the United States in November, down from 219,950 cars one year earlier. Truck shipments were 46,697 units, down from 54,991 units in November 1987.

Also shipping fewer cars in November were: West Germany, off 25 percent; Mexico, 16.4 percent; Brazil, 18.9 percent; Yugoslavia, 30.4 percent; Italy, 60.3 percent; and United Kingdom, 31.8 percent.

PROFITS

FROM PAGE 1

makers' overseas profit picture.

Ford's North American net income fell from $3.6 billion in 1987 to $3.3 billion, still significantly above the 1986 level of $2.6 billion.

Meanwhile, Chrysler's North American profits have slid steadily — from $1.4 billion in 1986 to $1.1 billion in '88. Chrysler's automotive profits in North America fared even worse, slipping from $1.2 billion in 1986 to $842 million last year.

General Motors' North American net income dropped from $3.4 billion in 1986 to $1.7 billion in 1987, then edged back to $2.2 billion last year.

GM and Ford announced their record 1988 results last week and Chrysler released its results February 2.

GM officials said they were "pleased with GM's record performance." Chrysler trumpeted "net earnings for the company of more than $1 billion for the fifth straight year." And Ford basked in its "continued success."

But the numbers tell a story of fierce competition in North America.

Chrysler's profits simply sagged.

GM's struggling North American profits show none of the momentum of its overseas operations. GM earned a record $2.7 billion on overseas sales in 1988, up from last year's $1.9 billion and from a $600 million loss just three years ago.

Ford's respectable but declining North American profits are greater than its overseas earnings. But Ford's overseas earnings soared from $700 million in 1986 to $2.3 billion last year.

Part of the automakers' North American problem is the cost of doing business in an increasingly competitive market.

They are all committed to cost-cutting, but it's getting tougher "to get cost savings down to bottom line," said David Healy, an analyst with Drexel Burnham Lambert. "They will be eaten up in the form of sales incentives" and other expenses tied to holding on to market share.

Declining profits at the automakers' financial subsidiaries show they are taking the heat.

OVERSEAS PROFITS MOUNT

Dollars in billions

	NORTH AMERICAN			OVERSEAS		
	1988	1987	1986	1988	1987	1986
GM.....	$2.2	$1.7	$3.4	$2.7	$1.9	($0.6)
Ford....	3.3	3.6	2.6	2.3	1.0	0.7
Chrysler	1.1	1.3	1.4	—	—	—
BIG 3	$6.6	$6.6	$7.4	$5.0	$2.9	$0.1

Chrysler overseas operations are negligible.

General Motors Acceptance Corp. reported 1988 earnings down 18 percent from 1987. At Ford Motor Credit Co., 1988 profits declined 17 percent. Both companies attributed the declines to narrower interest margins and high loan losses.

GMAC earned $1.2 billion in 1988, down from the record $1.5 million in 1987.

Ford Credit earned $564.2 million in 1988, down from record net income of $678.8 million in 1987.

David McCammon, Ford treasurer and vice president — finance, emphasized that the big problem at Ford Credit in 1988 was interest margins, not bad loans. He noted, however, that personnel are being trained in collection methods.

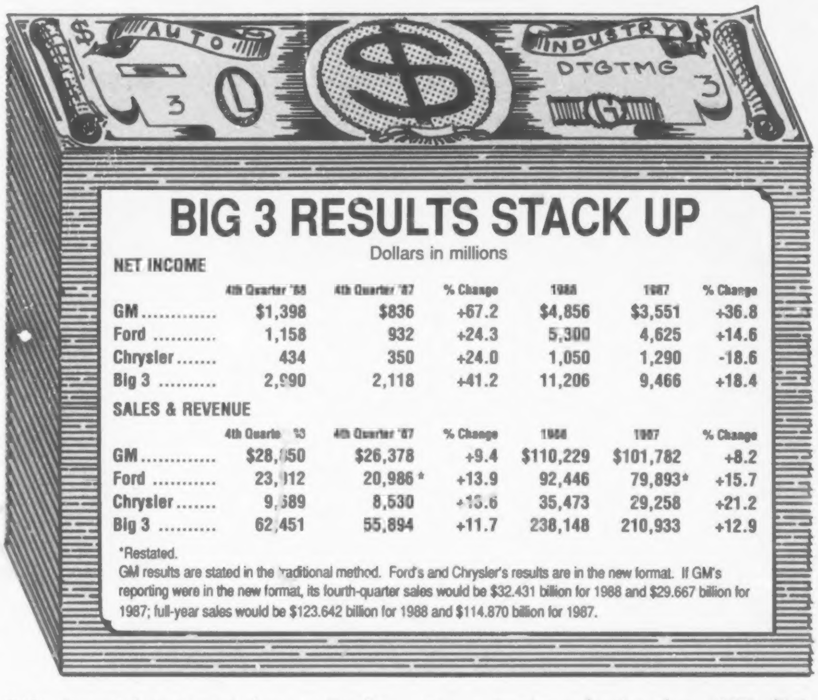
Because more buyers with long-term loans are just walking away from cars that are worth less than the amount due on the loans, Ford is also working with dealers to push shorter-term loans.

Ford's profit slide in North America occurred despite manufacturing efficiencies that helped take a total of $5 billion out of the company's costs worldwide since 1979, McCammon said.

Ford's North American profits slipped in 1988 also because of "a less favorable product mix and higher product and marketing costs," Ford said. Ford's new Thunderbird and Mercury Cougar were not available for the full year and plants making the old models were down for retooling.

McCammon said the company spent $400 million more on incentives in 1988 than in 1987, but he would give no base amounts.

High selling costs are more evident on GM's financial statement than on Ford's. GM spent $759 million more to market its products in 1988 than in 1987.



BIG 3 RESULTS STACK UP

Dollars in millions

NET INCOME

	4th Quarter '88	4th Quarter '87	% Change	1988	1987	% Change
GM............	$1,398	$836	+67.2	$4,856	$3,551	+36.8

*Restated.

GM results are stated in the traditional method. Ford's and Chrysler's results are in the new format. If GM's reporting were in the new format, its fourth-quarter sales would be $32.431 billion for 1988 and $29.667 billion for 1987; full-year sales would be $123.642 billion for 1988 and $114.870 billion for 1987.

Ford's U.S. automotive profits of $2.5 billion were down $249 million from 1987. McCammon attributed the decline to higher factory and facility costs, as Ford added capacity last year.

"We plan to spend substantially more in 1989 than in 1988," he said. Through 1993, the capital outlay will be "substantially more than $19 billion," he said.

McCammon expects that improved performance will offset the rise in capital spending. "We'll be spending more but doing better," he said.

Ford's worldwide automotive operations in 1988 had net income of $4.6 billion on sales of $82.2 billion. Automotive earnings were up $841 million over 1987, because of higher profits outside the United States, the company said.

Those overseas automotive profits were a record $2.1 billion, up $1.1 billion from 1987.

GM last year continued a steady three-year profit climb to $4.9 billion, up 36.8 percent over 1987 earnings of $3.6 billion, which in turn were 20 percent above 1987 earnings. GM net income in 1988 was its highest since 1984, when it earned $4.5 billion.

GM's profit came on industry record sales of $110.2 billion. The more-efficient Ford set another industry profit record — $5.3 billion — on sales 16 percent lower than GM's.

GM showed significant gains in areas the company targeted for improvement, such as cost reduction and return on equity.

But a sign of the immense job required to turn the behemoth around is that big improvements in several areas were not enough to buoy North American earnings, which GM obliquely said were $500 million more than 1987 profits.

GM called 1987 North American profits "nominal."

The bulk of GM's 1988 profits came from record earnings at Electronic Data Systems, GM Hughes Electronics and GM's overseas operations. While earnings at GMAC were off from last year's record, they were still the second-best in its history.

A big chunk of EDS earnings in 1988 was GM money. EDS signed several fixed-price contracts with GM and its subsidiaries to the tune of $2.8 billion, compared with $1.9 billion in contracts outside GM.

GM's 1988 profit margin of 4.4 percent improved almost a full point, from 3.5 percent in 1987. GM is obviously becoming more efficient, but just as obviously has not done enough.

Robert O'Connell, GM's chief financial officer, called the improvement in North American operations significant. "We think they're on the road," he said.

GM's cost-cutting program, called the GM Action Plan, slashed $4.8 billion in costs last year, a greater reduction than 1987's $3.7 billion. Costs are being cut by product simplification, such as reductions in the number of models offered, sharing of components among models and higher facility utilization.

GM is now well on its way to its target of getting a total of $13 billion out of costs by 1990. That target has been moving since GM set it at $10 billion in 1986.

Capital spending was down to $5.6 billion in 1988, from $7.2 billion in 1987 and a whopping $11.8 billion in 1986.

Analysts expect the cost-cutting to continue. But it won't mean instant profits — not with expenses such as the cost of rebates and incentives in the fourth quarter, which amounted to up to $1,000 per vehicle.

Joseph Paul of Bernstein Research in New York expects GM to save a total of $15 billion by 1990 and $19 billion by 1992 through its cost-reduction program.

GM has eliminated 40,000 salaried and 87,000 hourly workers since 1986. Most of those salaried workers left in 1987. Last year, 34,700 hourly workers left, about the same as the 34,300 who left in 1987.

GM has closed seven assembly plants since 1987.

Besides still having to cut more staff, GM has 15 percent unused capacity and will need to close more plants, Drexel's Healy said. Other analysts concur.

"But these are real people and real plants. The translation from the theoretical to the real will be difficult," Healy said.

GM's financial statement for 1988 shows another problem with cost reduction efforts: For a giant employer, trimming costs in one area can increase costs in another. This is happening in the growing cost of health care and life insurance benefits for retirees.

Costs for retiree benefits at GM grew as the number of active employees decreased to 766,000 last year.

Last November, O'Connell said he expected that through attrition, 20,000 hourly workers would leave the payroll annually through 1992.

Predictably, retiree benefit costs, which are affected by the skyrocketing costs of health care, have been growing steadily, from $864.6 million in 1986 to $1.1 billion last year.

Retiree benefit costs will pale when, in a couple of years, a new Financial Accounting Standards Board rule is expected to take effect. At that time, GM and other corporations will have to change their pay-as-you go method of accounting for retiree benefits and charge those benefits as they are earned by active employees. For one of the biggest employers in the world, that could mean $2 billion to $3 billion set against profits annually, analyst Healy predicted.

GM's headcount reductions will pay off in the future, as both active and retiree pools dwindle.

GM expenses for a program promoting early retirement for salaried employees slowed last year to $144.1 million from $437.7 million in 1987, as target reduction levels were reached.

But Ronald Glantz of Montgomery Securities believes GM has to cut another 40,000 of its 108,000 white-collar workers because they make up the excess layers of management that are standing in the way of new products GM needs to gain market share, Glantz said.

GM's O'Connell disagrees. With 40,000 salaried workers gone since 1986, "we have a pretty tight ship," and further staff reductions will be taken care of by attrition. He said GM will focus on "aggressively getting improvements in market share on a profitable basis."

GM said it gained one-half point of market share — to 35.2 percent — in sales of U.S. cars and trucks in 1988. But without trucks, its new-car share slipped to 36.08 from 36.47.

GM's 1988 results showed impressive gains. Earnings per share for 1988 were $7.17 (after the two-for-one stock split announced earlier this month), compared to $5.03 per share (adjusted for the split) earned in 1987.

GM's industry-record sales of $110.2 billion were up from $101.8 billion in 1987. GM's previous record was $102.8 billion in 1986.

GM nearly doubled its year-earlier final-quarter earnings. Net income for the October-December period was $1.4 billion, up from $835.8 million in 1987.

Worldwide factory sales totaled 8,108,000 units, up 4.4 percent from 1987.

GM ended the year with a cash till of $6.8 billion, compared with $4.7 billion at the end of 1987. Including GMAC, cash and marketable securities at year-end were $10.2 billion.

Operating income was better than at any time since 1985 — $4.7 billion, up from $2.6 billion in 1987. Working capital at year-end was $16.5 billion, up from $13.0 billion in 1987.

Because of improvements in its U.S. operations and a change in the profit-sharing formula, GM hourly workers will get an average profit-sharing check of $254. Profit sharing funds of $114 million will be distributed to about 470,000 employees.

In the fourth quarter, GMAC's net income totaled $257.4 million, up from $235.0 million in the 1987 quarter.

GMAC financed or leased 2.0 million new cars and trucks in 1988 — 30 percent of new GM vehicles sold. That compares with 2.6 million in 1987, or 41 percent of new GM vehicles sold.

Low-interest consumer incentive programs offered in 1987 were not repeated in 1988.

GM Hughes achieved record earnings and revenues for the third consecutive year. The company had net income of $802.1 million on sales of $11.2 billion in 1988, compared with $670 million on sales of $10.5 billion in 1987.

EDS posted record net income of $384.1 million in 1988, a 19 percent increase over $323.1 million in 1987.

Sales for 1988 totaled $4.8 billion, compared with $4.4 billion in 1987.

Ford's 1988 net income of $5.3 billion amounted to $10.96 a share. Factory unit sales were 6,517,000, up 402,000 units from last year.

Ford's share of the U.S. car market was 21.7 percent, the highest in 10 years and up 1.5 percentage points from 1987.

Because its North American profits slipped, Ford's profit-sharing payout to its workers will average $2,800, down from $3,700 in 1987.

Ford had $9.2 billion in cash at the end of 1988, down from $10,175 billion in December 1987.

As for spending it, McCammon said Ford will be patient until the right acquisition comes along.

Ford's subsidiary First Nationwide Bank, which acquired several thrifts in 1988, needs "time to digest" them, McCammon said.

Without major low-rate financing programs, Ford Credit financed 29 percent of all new vehicles sold by Ford dealers in the United States in 1988. That compares with 25 percent in 1984.

Car output tops million, leads 1988

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers built their one-millionth car of the year last Thursday, 10 days ahead of 1988.

So far this year, 1,043,466 cars have been assembled, 20.11 percent more than the 868,757 completed last year at this point.

Last week's scheduled car output totaled 157,862, 3.69 percent more than the previous week's 152,242 and 17.54 percent above the year-ago week's 134,306.

Companies split last week's estimated build as follows: General Motors, 48.59 percent; Ford Motor Co., 24.21 percent; Chrysler Motors, 13.18 percent; Honda of America Manufacturing, 5.27 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.06 percent; New United Motor Manufacturing Inc., 2.53 percent; Nissan Motor Manufacturing Co. U.S.A., 1.48 percent; Toyota Motor Manufacturing U.S.A., 1.24 percent; and Diamond-Star Motors, 0.44 percent.

Truckmakers targeted 93,554 units last week, 1.55 percent below the prior week's 95,026 and 7.94 percent above the year-ago week's 86,670.

Year-to-date, 629,934 trucks have been assembled, 8.36 percent more than the 581,322 built last year at this time.

GM closed its Doraville, Ga., and Fairfax, Kan., plants today until March 6 for inventory adjustment. Doraville builds the Oldsmobile Cutlass Supreme, and Fairfax assembles the Pontiac Grand Prix.

GM's Tarrytown, N.Y., plant remains idle for conversion to the all-purpose vans — Pontiac Trans Sport, Oldsmobile Silhouette and Chevrolet Lumina APV.

GM's Reatta Craft Centre in Lansing, Mich., resumed production last week after being idle for three weeks to adjust inventory and prepare the plant for convertible production.

Overtime was scheduled last Saturday at four GM plants: Lordstown, Ohio; Arlington, Texas; Flint, Mich.; and Baltimore.

Ford slated overtime last Saturday at Lorain, Ohio; Wayne, Mich.; and Louisville, Ky.

All Ford plants are scheduled for daily overtime this week except the Atlanta and Chicago facilities.

Cars and trucks rise in Canada

Canadian auto production was targeted at 22,033 units last week, 4.58 percent more than the prior week's 21,069 but 3.30 percent below the year-ago week's 22,786.

So far this year, 136,169 cars have been built, 12.67 percent below the 155,930 completed last year at this point.

Truckmakers scheduled assembly of 21,777 units last week, 1.94 percent more than the previous week's 21,362 and 8.55 percent more than the year-ago week's 20,061.

Year-to-date, 142,916 trucks have been assembled, 10.11 percent more than the 129,799 built last year at this time.

SAE show to rev up Motor City

40,000 on hand to trade ideas

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Magna's jewel, Page 59

Planes, trains and automobiles, the title of a comic movie, might also describe the 1989 SAE International Congress and Exposition, meeting this week at Detroit's Cobo Hall.

The official theme is "Engineering the Excitement." The exposition runs through Thursday while the congress ends Friday.

The meeting will focus on an exchange of information between "mobility" engineers from a variety of disciplines, including aerospace, electronics, computers, automobiles and heavy trucks, according to Howard F. Voigt, SAE Detroit section chairman and chief engineer, overseas product engineering, for Ford's international automotive operations.

Although SAE is focused on the automobile, the engineering society includes representatives from every transportation medium.

Aerospace and automotive technologies in particular are becoming more closely linked — an example is the marriage between General Motors and Hughes. And that new relationship between industries

Mercedes-Benz is set to introduce its replacement, above, for the 18-year-old SL series at Geneva. Also bowing will be Alfa Romeo's limited-edition SZ coupe based on the 75/Milano series and built by coachbuilder Zagato.

2 big intros set for Geneva

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — Successors to a pair of Europe's longest-running hits debut at next week's Geneva Auto Show, but there also will be plenty of other attractions vying for the spotlight.

Replacements for Mercedes' 18-year-old SL range and the 13-year-old Ford Fiesta will be displayed at Geneva, closing out eras in each case.

The world also gets a first look at Alfa Romeo's aggressively styled, limited-edition coupe from Italian coachbuilder Zagato Car as well as Zagato's limited-series joint-venture sports car with Japan's Autech.

And the European supercar stakes could go up further next week as Jaguar is expected to announce whether it will put its XJ-220 show car into production.

Volkswagen will present a Golf rally car that should signal the future direction of the hot hatchback wars, and Daihatsu, which two years ago launched the new Charade at Geneva, will preview the next-generation Charmant.

But Geneva's real importance is as an industry gathering place. While not the largest motor show in Europe, it is the only international show held annually and is probably the best attended among auto leaders.

Mercedes-Benz begins its long-awaited response to BMW's recent product offensive with the SL range. The 2+2 convertible se-

No third plant for minivans, Chrysler says

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In a decision indicating caution in the face of growing competition, Chrysler Motors President Robert A. Lutz said the company has ruled out adding a third minivan plant.

Just last month, Chrysler Corp. Vice Chairman Gerald Greenwald described the possibility of a third plant as "an open question."

Lutz

Lutz said the company decided against another minivan plant in order to balance its product plans and shore up weak spots — and because Chrysler's minivan market share could someday be threatened by a successful competitor. In 1988, the company held 51.6 percent of the compact van market.

Chrysler's top management has said repeatedly that minivan demand will exceed industrywide availability for several years.

Chrysler's decision to rein in its optimism as it heads into the next decade comes as new minivan entries from General Motors and a handful of Japanese players are scheduled for introduction beginning next fall.

With that key minivan decision behind it, Chrysler now must tackle how it will anchor the bottom end of its lineup in the next decade after the Dodge Omni and Plymouth Horizon are dropped.

"The decision on what we do in the lower end of the market is one of the most pressing management decisions and one of the greatest dilemmas we currently face," said Lutz, speaking to the Detroit Auto Writers Group last week.

In a reversal of the stance held by Chrysler and other

D-DAY NEAR

Japanese view '89 as year to decide on Europe plants

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Japanese automakers believe they are facing a deadline for setting up assembly plants in Europe, and most view 1989 as the year of decision.

And though the Japanese were recently said to be rethinking plans to come to Europe because of uncertainties about the post-1992 unified market, they nonetheless appear to be forging ahead.

There remain some deep concerns and a sense that except perhaps for the United Kingdom, Japan's carmakers are unwelcome in Europe. But they also recognize that to be established in protectionist-minded Europe on Jan. 1, 1993 — when the borderless internal market is scheduled to be in place — they need to move quickly.

Toyota has given the first indication of its European plans and there are rumblings elsewhere. While Ford and Mazda deny ever-increasing speculation that they plan to build cars together in Europe,

Yugo maker plans to run U.S. firm

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEWARK, N.J. — Yugo dealers were told last week that the manufacturer intends to stand by Yugo America as the U.S. distributor, but will probably control the company once Chapter 11 bankruptcy proceedings are concluded.

Miroslav Spagnut, deputy general manager of exports for Yugo maker Zavodi Crvena Zastava, said, "Zastava is not intent on terminating Yugo America. Our basic intent is reorganizing it.

"It is quite clear when the company comes out from Chapter 11 that certain changes will take place. Yugo America must look entirely different than it does now," Spagnut said.

Bricklin beset by cash woes

Tax, debt claims pile up in Colo.

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Malcolm Bricklin is wooing Wall Street in an effort to raise $2 billion through the sale of high-yield bonds so Bricklin Motors can buy 1,000 dealerships this year.

But in tiny Meeker, Colo., where Bricklin keeps residence, court records show that his business and personal finances are in disarray.

Bricklin may owe the Internal Revenue Service as much as $131,000 in overdue income taxes for 1986, a local bank wants to seize his helicopter for defaulting on payments, one of his ranches is in foreclosure and a plan to breed mules has apparently run aground.

Bricklin, Bricklin Properties and Bricklin Industries are the targets of a slew of lawsuits from businessmen demanding everything from payment for stacking hay to payment for architectural services, according to records at the Rio Blanco County District Court in Meeker.

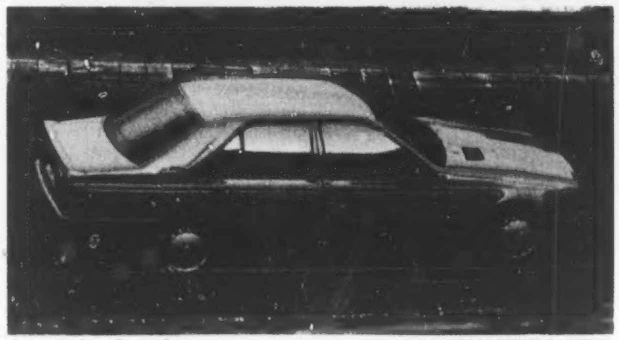
Bricklin

Says Bricklin: "This is a small community and there are a number of people who like to play games, and they want to play games with me."

Last April, Bricklin Industries sold its share of Global Motors — importer of the Yugo and would-be importer of the Proton Saga — to a Wall Street investment firm for an estimated $20 million.

Ron Warnicke, Bricklin's attorney, attributed Bricklin's financial troubles to Global Motors' January filing for bankruptcy protection.

"When Global filed for bankruptcy, the deferred payments to Bricklin Industries stopped," Warnicke said. "When cash flow ceases, it is difficult to refinance properties and it takes time to resolve issues."



HIDDEN IMAGE/HANS G. LEHMANN

Slipperier S series
The next-generation Mercedes-Benz S-class cars are larger than current models and adopt the aerodynamic styling of the E series. Overall length, width and wheelbase are stretched a bit, and the cars will pack engines ranging from six to 12 cylinders, pumping out about 240 to 400 horsepower. The series is expected to debut at the 1990 Paris auto show.

On Feb. 21, the Colorado Department of Revenue entered a claim against Bricklin in District Court seeking $58,875.77 in unpaid individual income taxes for 1987.

Last June, the IRS filed a lien against Bricklin's property and assets seeking $131,356.47 in unpaid income taxes for 1986.

Bricklin said last week that he paid his 1986 tax bill, but there is no release of lien in court records.

An IRS spokeswoman said a lien would not be released until the whole bill is paid. She would not disclose if Bricklin had made any payments toward the bill.

On Feb. 10, United Bank of Broomfield asked the sheriff of Rio Blanco to seize Bricklin's helicopter, valued at $100,000, for defaulting on his payments.

Although Bricklin said the helicopter has been sold, a court official said the lawsuit is still active.

Last April, Bricklin told Automotive News he would concentrate on the real estate business.

St. Louis businessman Thomas Moore Sr., former owner of the Bricklin Ranch (known as the Bar-Bell Ranch), told Automotive News he has yet to receive the 1988 payment for the property due Dec. 31. Bricklin bought the ranch in 1986.

"We have put it in the hands of the banks and the lawyers," Moore said. "If he doesn't come up with the money, we will take the necessary steps."

Foreclosure proceedings against Bricklin's other ranch, known locally as the Franklin Ranch, are under way. Bricklin Industries purchased the property for $1.3 million in 1987 but has defaulted on payments, according to the lawsuit filed on behalf of Benjamin P. Franklin Jr., representing the estate of his father.

Bricklin and Bricklin Properties also are named in a lawsuit by John Avery, who says Bricklin hired him to manage the Bricklin Ranch and establish facilities to breed mules. Avery alleges that Bricklin failed to pay him the agreed-upon finder's fee for assisting in the acquisition of six properties near the ranch.

He also alleges that Bricklin owes him $150,000 in back wages dating back to August 1987.

The lawsuit also says Bricklin has failed to keep his promise to spend $1 million for facilities to raise and breed mules.

And laborer Mike Sullivan sued Bricklin Properties Jan. 23, asking for payment of $10,000 for stacking hay last summer.

There is also a lawsuit and accompanying lien against the Bricklin Ranch for $140,000 from Ohio-based Schmidt Copeland & Associates, an architectural firm employed by Bricklin to build a summer youth camp on the ranch.

Several weeks ago, Bricklin announced his next venture — the first national dealership chain, comprising 1,000 points. Two New York investment banking houses are lined up as financial advisers.

Bricklin entered the automotive business by importing Subarus in 1968. He later launched his own company to build a gull-wing sports car, but it went bankrupt.

In 1983, he formed International Automobile Importers to import the Bertone X 1/9 and Pininfarina Spider after Fiat left the U.S. market. In 1984, Bricklin formed a company to import the Yugo.

'Rough Riders' hit by first defections

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Ron Tonkin's "Rough Riders" got off to a rough start last week as a prominent member of his ad hoc industry relations subcommittee declined to participate.

And several dealers contacted about their inclusion on a list of more than 200 either don't want to participate or are warily eyeing Tonkin's agenda before saddling up.

Roger S. Penske, chairman of Penske Corp., sent a mailgram to the National Automobile Dealers Association president last week, saying, "I am not a rough rider and I do not want to be involved in any action against OEMs. Also I did not agree to give anyone the right to use my name."

Two weeks ago, Tonkin announced the names of his first 205 Rough Riders, a group of large-volume dealers who, he said, will work outside NADA to challenge factories on their subsidized sales to leasing companies and on issues of dealership control. Tonkin said the group had rallied as volunteers around his criticism of fleet subsidies and factory control of customer satisfaction indexing and "dealer improvement programs."

Penske

But before the group's first meeting had been scheduled, Penske notified Tonkin that he had not asked to serve either on the 15-member steering committee nor as one of the 200 to 300 rough riders named by Tonkin.

Tonkin maintains that he had spoken to Penske about the idea last July in Detroit at the Automotive News World Congress.

"He gave me his card and said he'd be happy to help," Tonkin said of Penske. "I tried several times to reach him to make sure he was still interested before going public with the list but I was unsuccessful."

Several of the dealers have expressed surprise at seeing their names listed among the Rough Riders.

Gordon L. Stewart, a Chevrolet dealer in Garden City, Mich., believes his relationship with the factory may have been damaged by the list.

"I was totally stunned when I saw my name on the list as a Rough Rider," Stewart said. "I've gotten phone calls from people at the factory asking me what it means. I don't know what it means."

Stewart said he fired off a letter to Tonkin asking him why he included Stewart's name. "I'm not interested in this fisticuffs approach to solving problems," Stewart commented. "I'd like to see an end to fleet subsidies, certainly. But this isn't the way to accomplish that."

In response to uncertainty on the part of some Rough Riders, Tonkin said, "I need to clarify my position on these issues. It's up to me to convince dealers that it's time to get involved."

A number of other steering committee appointees also said they were taken by surprise at seeing their name on the list. However, most said they agreed with some elements of Tonkin's activist platform.

"I honestly can't remember volunteering for anything, and I sure as hell don't want to be on a list I didn't sign up for," said Iowa dealer Max Holmes, president of Holmes Oldsmobile-GMC-Honda, Des Moines. "As far as being a tough guy with the factory, that's not me. My father was always tough with the factory and I never saw that getting him very far.

"Now, on the other hand, when the factory starts talking about taking away my 5 percent model changeover allowance, as GM is planning to do, I'm ready for a fight," Holmes said.

He added that he wanted to hear more about Tonkin's plan for the group before making any decisions.

Pete Ellis, a Southgate, Calif., Dodge dealer, said he also was surprised to see his name among the Rough Rider volunteers, especially on the steering committee, although he agrees with Tonkin's initial rallying cry.

Hungerland's mission: revive faltering VWoA

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — A new president of Volkswagen of America takes the helm Wednesday, facing as daunting a list of challenges as any executive in VW's 40-year history in the United States.

Hans-Jorg Hungerland, 47, will be the new point man as the organization tries to end three years of sales bloodshed on both the Audi and Volkswagen sides of the business.

Each division is struggling to establish a stronger image. But the Volkswagen car line will likely be at the top of Hungerland's urgent list. Dealers, who are increasingly talking of their financial plight, are looking for an immediate sales aid as well as a long-term strategy for recovery.

Audi, too, has had to scrap for every sale. But VWoA's luxury division has a comeback plan in place, and dealers generally seem to be in support.

Although he officially begins this week, Hungerland has spent much of this month in the United States. The former export sales manager for Volkswagen AG in West Germany crisscrossed the country, meeting regional staffs and groups of dealers. With him was William Young, his hand-picked successor to James Fuller, the late vice president in charge of Volkswagen United States.

Their tour appears to have reassured VW dealers, who were left in a state of shock when Fuller and marketing director Lou Marengo were killed aboard Pan Am flight 103 in December.

One dealer called his session a somber yet constructive exchange, free of finger-pointing. Another veteran dealer, who confessed that the business has lost much of the fun it once had, said the meeting alone inspired him to order two dozen cars.

Hungerland and Young "realize that we're in a mess, which is an understatement," said one company official. "They know that some significant changes have to be made."

Neither executive was available for interviews last week.

Hungerland's arrival also represents the end of one era and the return to another. The VWoA organization has been carved to employee levels of the mid-1970s, before it began its decade-long era as a manufacturer of cars in the United States. The plant closed last year, and the company's employee count is now at 2,500, compared with a peak of more than 10,000 in 1980.

Hungerland's predecessor, Noel Phillips, is moving to another manufacturing operation, Autolatina, VW's joint venture with Ford Motor Co. in Brazil.

In the first four full years of Phillips' tenure, beginning in 1983, VWoA earned combined profits of $279 million. In 1987, the company lost $317 million, with more than half the loss tied to the plant closing. Results for 1988 haven't been announced.

Hungerland and Young approached their visits as a fact-finding mission. They spent most of their meetings listening, according to dealers who attended. But the pair did give some hints of what kind of action they may be taking. Hungerland promised that he is committed to restoring the company's position in the market.

In the short run, dealers are looking for Young to provide imaginative sales programs. A discount financing and dealer incentive pro-

Dealers sought for nationwide phone referral net

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Imagine if every car buyer in America could phone the same, easily memorized, toll-free number to reach a nearby dealer, no matter what kind of car they wanted to buy.

That's one of the premises behind the Auto Yes network, a dealer advertising co-op that is being test-marketed by more than 275 dealers in the New York area and could be in 20 major markets by year's end.

A print ad campaign for the pilot program began Feb. 17, and television ads are expected to begin Wednesday, inviting car shoppers to call 1-800-AUTO YES.

Auto Yes founder Martin Ain, a former leasing franchiser who owns two Long Island dealerships, said last week that more than 3,000 people responded to the print ads in the first week.

Ain said Auto Yes ads direct buyers to a particular dealer, as opposed to factory co-op advertising, which he said tends to promote a brand rather than a dealer.

When you call the 800 number, a chipper recorded message says, "Congratulations! You have reached the Auto Yes Consumer Network. We plan on saving smart shoppers like you millions of dollars every year in time and money."

The message promises that if you call a dealer affiliated with the network, you'll get "the VIP treatment you deserve" and a special "Auto Yes deal," though no specific price savings are mentioned.

Next, the caller is asked to dial the first three letters of the car brand he or she is interested in — for instance, "TOY" for Toyota.

Callers must have a Touch-tone phone to use the system. Shoppers with a rotary phone are directed to call a different number for more information.

Once the desired make is dialed, the computer-synthesized voice asks for the area code where the caller will be buying the car, followed by different numbers further defining the caller's location — usually divided by county or zip code.

Once those numbers are punched in, a recorded message identifies the local Auto Yes dealer for a particular brand and provides the name and phone number of a specific salesman assigned to Auto Yes sales.

The recording reminds the caller to ask for only that individual to get the special Auto Yes deal.

Ain said participating dealers have agreed to reduce prices for the phone service's customers, but the discounts may vary, and state laws make it difficult to advertise bargain prices — especially in New York, which recently adopted stricter ad rules.

Dealers pay $2,500 to sign up for the service and then pay a monthly service charge and a fee for each car sold through the program. Ain declined to detail those charges, saying simply that the service is comparable to the cost of a quarter-page newspaper ad.

Subscribers to the service must commit to a one-year contract.

Dealers who joined in the early stages of the program were given concessions, like a three-month trial membership in some cases, Ain said.

Last week, participating dealers said it is too early to tell whether the new program will sell many cars, but they said the idea is a novel and attractive one.

"I look at it as additional advertising. Hopefully, the business it generates will pay for the service," said Tom Giuliano, a BMW dealer in Westchester County, N.Y.

"Thus far, the response has been minimal," he said.

"I think it's a great concept," said Alan Castroll, president of Maplewood Peugeot in New Jersey.

Ain said he hopes dealers in the Auto Yes network ultimately will have signs, a separate Auto Yes customer lounge, and a philosophy that stresses customer service.

"They (dealers) know this is going to take time to build," he said.

The computers used to field calls can answer many calls at once, 24 hours a day, which would be too expensive if human operators had to be hired, Ain said.The network has only eight employees.

Maserati adds Canada distributor

By Alex Law
STAFF CORRESPONDENT

TORONTO — Maserati Automobiles has given Canadian distribution rights to auto dealer Bill Brack, president of Brookland Maserati here, and Brack announced the formation of Maserati Canada.

Maserati Automobiles, based in Baltimore, is a wholly owned subsidiary of DeTomaso Industries. DeTomaso owns 51 percent of Officini Alfieri Maserati S.p.A. which builds Maseratis in Modena, Italy.

Brack said his first move will be to appoint more dealers since there are only four Maserati dealers in Canada — Brack's own outlet in Toronto, two within an hour of Toronto and one in Montreal.

The first new dealer appointed by Brack is Modena Motorsports in Vancouver, British Columbia. He also plans a point in either Edmonton or Calgary, Alberta, and one in Ottawa.

Brack said Winnipeg, Manitoba, is being considered for next year, but he added it is unlikely that he will appoint a dealer east of Montreal.

"The market will keep it to seven dealers," said Brack.

His partners in the new firm are Gregory Buy and Douglas Crosty.

Maserati currently has three models in its lineup — the 430 four-door sedan, the 228 coupe and the Spyder convertible.

Brack said he expects a new four-cam, multivalve, 300-horsepower Biturbo to help boost sales by the end of the year. He is also looking for a new four-door sedan next year and perhaps a sports car with a 3.5-liter V-6 or V-8 after that.

With that product line, Brack said, Canada should be able to handle about 200 cars a year.

Brack said he wants the Maserati stores to be exclusives if possible.

"If someone has to rely on one car line for a living, they do a better job," he said.

"We've done a better job with Maserati in Canada than they've done in the U.S., and we'll keep doing a better job."

Brack said Maserati Canada will be operated out of his dealership in downtown Toronto.

Vixen may have siblings if sale of company goes through

Offer made for Vixen

Former Masco exec would widen range

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

A former Masco Industries official has made an offer to acquire Vixen Motor Co. in Pontiac, Mich., and plans to produce several kinds of specialty vehicles.

Michael J. Vogel, who formed his own investment company called MJV Industries in Troy, Mich., described his offer for Vixen as "more than a letter of intent. It has the terms, conditions, timing and basics of an agreement."

He said he anticipated quick approval of his offer.

"It won't be long before we have an agreement," predicted Vogel, who is anxious to resume production of the Vixen motor home in time for the spring selling season.

Vixen President Allen Dryer said, "The basic framework of the plan has been accepted. I'm confident it will be accepted."

The plan must be approved by Vixen's board of directors and by the State of Michigan Pension Fund, the Detroit Police and Fire Pension Fund and the Michigan Retirement System, which together have invested $35 million in the company and own 70 percent of it.

Pension fund officials were vague but optimistic about the outcome of the negotiations.

"We never negotiate deals in public, but we are hopeful things will work out. Vogel is a very talented man," said Robert Kolt, Michigan Treasury spokesman.

Vixen was formed in 1981 by William Collins Jr. and Robert Dewey, two former GM officials.

The original Vixen 21 went on sale in February 1986.

Conceived in anticipation of high fuel prices, Vixen never achieved its profitability or sales goals. It featured a turbodiesel engine and manual transmission at a time when diesels went out of vogue and comfort took to priority.

The company came out with a new gasoline engine/automatic transmission model in 1988 but ran out of orders and operating capital in winter. It was forced to shut down Jan. 23 and look for a buyer.

Vogel declined specifics on his proposal, though he expects to pay off Vixen's supplier debt and not borrow any additional money from pension fund investors.

Vogel is a former group president of Masco Industries in Taylor, Mich., which operates companies that supply the auto and oil tool industries with products like valves, fasteners, heavy metal stampings, machine assemblies and forgings.

His plan to make Vixen profitable includes using the basic vehicle platform and shell to produce six or seven other specialty vehicles, including a mobile office. He said the combination of vehicles will generate enough volume to be profitable.

"A lot of people have expressed interest in an executive sales-type vehicle, a traveling vehicle with the amenities on board — a john, computers, faxes, phones and copiers — everything required to conduct a business," Vogel said.

Some executives from other motor home companies looked at the Vixen operation and concluded that it had a high-overhead plant. Vogel disputed that notion.

Vogel plans to be chief executive officer and retain Dryer as chief operating officer.

Hyundai Canada chief gets new job in Korea

By Alex Law
STAFF CORRESPONDENT

MARKHAM, Ontario — The first high-ranking Hyundai executive to live and work in North America is returning to South Korea.

Byung Jae Park, president and chief executive officer of Hyundai Auto Canada, has been promoted to executive director of overseas operations for Hyundai Motor Co. in Seoul.

He assumes his new responsibilities March 1 and will be succeeded by Yoo-il Lee.

In his new job, Park will direct an expanded overseas operations division, which now accounts for about half of Hyundai's sales. Along with vehicle export planning and operations, he will be responsible for overseas service planning, parts and operations.

He also will be in charge of the Canadian operations, which include the Sonata assembly plant in Bromont, Quebec, and the wheel plant in Newmarket, Ontario. The assembly plant opened in January and the wheel plant was officially launched two weeks ago.

Hyundai said the promotion of Park after two years' North American experience will help the parent company find markets for Canadian-produced Sonatas that won't be sold by Hyundai in North America or by Chrysler Motors' Jeep-Eagle network in the United States. When it reaches capacity, Bromont will be capable of producing 100,000 cars a year.

Park's successor, Lee, served seven years as managing director of export operations before his move to Canada. He was responsible for planning and implementing Hyundai's introductions in Canada and the United States. Though Hyundai's sales growth has tapered off recently, the two launches were the most successful of any import cars in North American auto history.

Mid-month car sales down 11%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Retail deliveries of U.S.-built cars declined 11.72 percent in the middle 10 days of February.

The average daily selling rate, however, was only a fraction of a point below last year's. There was one less selling day this year.

A total of 185,672 domestic cars were sold in the Feb. 11-20 period, compared with 210,316 last year.

All Japanese transplant automakers sold more cars in this year's mid-February period.

New to the domestic list this year is Mitsubishi, which sells Eclipse models built at the Diamond-Star joint venture with Chrysler in Normal, Ill. In mid-February, 433 Eclipses were sold.

All three U.S.-based automakers sold fewer cars in this year's mid-February period.

Chrysler Motors reported the biggest 10-day loss. It sold 27.52 percent fewer cars.

General Motors sold 12.14 percent fewer cars in mid-February, although Cadillac and Oldsmobile dealers reported gains.

Ford Motor Co.'s car sales fell off 9.72 percent in the period.

Among the four U.S. light-truck makers, only Nissan reported an increase. U.S. light-truck sales dropped 7.14 percent to 108,992, down from 117,377 a year ago.

Combined sales of domestic cars and light-trucks were 295,320, down 9.88 percent from last year's 327,693.

AWARD

Minority buying by GM honored

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — General Motors has been honored by the National Minority Business Council for GM's support of minority-owned suppliers.

Donald A. Pais, GM vice president, materials management staff, said GM spent about $1.1 billion with minority-owned firms in 1988.

John W. Haines, director of minority supplier development for the materials management staff, said 1988 was the third consecutive year GM topped $1 billion in purchases of materials and services from minority-owned businesses.

American Express, IBM and the University of Medicine & Dentistry of New Jersey received similar awards.

The awards are given for "exemplary commitment and responsiveness to minority-owned firms by large corporations," the council said.

Last month, GM signed an agreement with the National Association for the Advancement of Colored People to provide equal opportunities for blacks and other minorities.

Donald Pais, left, receives award from Philip Duffy, chairman of the National Minority Business Council advisory council

And last month, a tentative settlement was announced in a six-year-old class-action lawsuit in which GM was accused of using an employee evaluation system — which has since been scrapped — that allegedly discriminated against black employees because it was vague and left substantial discretion to supervisors.

GM agreed to make financial settlements with black salaried workers and to establish a computer system to monitor the career progress of black employees. It also agreed to pay about $3 million to 3,800 past and present employees in back pay and pay adjustments.

In reaching the settlement, GM did not admit discrimination.

Chrysler calls owners about satisfaction

HIGHLAND PARK, Mich. — Some 3,500 Chrysler Motors employees have volunteered to telephone more than 180,000 owners of Chrysler products in a new customer satisfaction campaign.

Each volunteer Chrysler employee will make about 60 telephone calls by March 31.

After verifying that the caller has reached an owner or driver of a Chrysler product, several questions are asked. They include: "Is there anything, positive or negative, that comes to mind about your experience with Chrysler? Something about the product itself or your experience purchasing the product or having it serviced?"

The caller records the responses and asks what improvements could be made. The telephone poll results will be tabulated and distributed throughout Chrysler for review.

"Calling the customer is another step toward Chrysler's goal of complete customer satisfaction," said A.C."Bud" Liebler, Chrysler Motors director of marketing services. "To reach that goal, we need to talk directly to our customers, to listen to them so that we understand their specific wants and needs."

Europe's sales boom continues

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Europe's new-car market continued to surge in January, belying predictions of a downturn in 1989.

New-car sales rose 11.5 percent, according to industry estimates compiled by Automotive News.

Sales in 17 Western European countries totaled 1,163,800 in January, up from 1,044,200 in 1988.

Industry executives and analysts have almost unanimously forecast a drop of 3 to 5 percent from last year's record sales of 13 million.

However, January is not necessarily considered a good month to gauge trends because of winter weather and national legislative changes that affect car sales.

Many European car industry officials predicted that the sales slippage wouldn't occur until the second half of 1989. On the other hand, the experts have so far underestimated the staying power of the current boom.

The European downturn is already at least a year overdue. Virtually every forecaster expected a decline in 1988, but the industry continued to gather strength in such key markets as the United Kingdom, France, Italy and Spain.

The United Kingdom began 1989 as the biggest market. West Germany, by far Europe's largest market in recent years, ranked fourth.

Volkswagen AG, which by most accounts had a good enough December to edge Fiat Group for first place in 1988, fell to third behind Fiat and Peugeot S.A. in January.

First-place Fiat Group, including the Fiat, Lancia and Alfa Romeo brands, rose 7.4 percent to 184,000 in January and garnered 15.8 percent of the market.

Peugeot S.A., including the Peugeot and Citroen makes, took advantage of the robust French market in January to vault past VW Group into second place. Peugeot S.A. took 14.3 percent of European sales in January, increasing unit volume by 25.1 percent to 166,900. The total included an 8.8 percent share for Peugeot and 5.5 percent for Citroen.

Maintaining second place for all of 1989 is considered unlikely for Peugeot. However, in the last two years, the French group has surged past Ford to take firm grip on third place in Europe, and Chairman Jacques Calvet has set his sights on first place by the early 1990s.

But achieving the latter goal will require the addition of a Golf/Kadett/Escort-class car in the Citroen line. It is expected in 1991 or 1992.

Volkswagen, Europe's sales leader since 1985, held only 12.9 percent of the market in January after achieving 14.9 percent in 1988. However, group sales, which include VW, Audi and Seat, actually rose 9.6 percent to 150,100.

VW brand sales jumped 13.7 percent in January, although the new Passat mid-ranger was not in the lineup a year earlier. Audi sales rose only 1.5 percent in January to 25,800. The group's market share consisted of 8.6 percent for VW, 2.2 percent for Audi and 2.1 percent for Seat.

Ford, which fell back to 11.3 percent in 1988 from 12 percent a year earlier, hit its goal of returning to 12 percent as January sales rose 11.4 percent to 140,100.

In Ford's strongest market — the United Kingdom — market share in January returned to the 29 percent the company held in 1987. Last year, a strike in Britain helped cut Ford's first-place share to just over 27 percent.

General Motors was next in Europe with 129,100 January sales, an increase of 13.7 percent and an 11.1 percent share. Renault was sixth among Europe's six large-volume manufacturers with an 11.3 percent increase to 114,800 units and a 9.9 percent share.

Among specialists, BMW surged 37.7 percent to 34,000 units and a 2.9 percent share. However, in January 1988, the company had not yet introduced the new 5 series that has fueled its current spurt.

Mercedes-Benz sales fell 4.7 percent in January to 38,500 and a 3.3 percent market share. In Germany, Mercedes tumbled 11.3 percent to 20,800, while BMW with its newer lineup was surging 91.3 percent to 15,000.

Combined Japanese sales edged upward 3.4 percent in January to 109,900, equal to 9.4 percent of the overall market. The growth of Japanese shipments to Europe closely mirrored the overall increase in the market in 1988 and share held at about 11 percent.

Nissan continued to lead the Japanese makers in Europe with sales of 28,400 last month, an increase of 5.2 percent and a 2.4 percent share.

The largest single market in January was the United Kingdom, where sales rose 13.2 percent to 220,200. Second-place Italy grew 6.8 percent to 220,000 and third-place France climbed 25.7 percent to 202,000 units.

West Germany, Europe's only major country to lose sales in 1988, improved 22.2 percent in January to 185,800 units.

Auto output is 148,464, down 5%

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto output dipped below the prior week's build as three General Motors plants were idle.

Automakers planned production of 148,464 units last week, 5.90 percent below the previous week's 157,768 but 14.63 percent more than the year-ago week's 129,514, when several plants were closed for inventory adjustment.

So far this year, 1,191,836 cars have been assembled, 19.61 percent more than the 996,443 completed last year at this point.

Companies split last week's estimated production as follows:

General Motors, 45.51 percent; Ford Motor Co., 25.02 percent; Chrysler Motors, 14.55 percent; Honda of America Manufacturing, 5.60 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.26 percent; New United Motor Manufacturing Inc., 2.69 percent; Nissan Motor Manufacturing Co. U.S.A., 1.58 percent; Toyota Motor Manufacturing U.S.A., 1.32 percent; and Diamond-Star Motors, 0.47 percent.

Truck assembly was slated at 91,027 last week, 5.54 percent below the previous week's 96,365 but 5.79 percent more than the year-ago week's 86,045.

Year-to-date, 723,772 trucks have been built, 8.40 percent more than the 667,667 assembled last year at this point.

GM will temporarily shut down its Willow Run, Mich., plant March 6 because of slow sales of the Pontiac Bonneville. The plant is expected to resume output March 13.

Three GM plants were closed all last week and one plant was idle Monday.

GM's Framingham, Mass., plant was closed Monday for the Presidents' Day holiday.

The company's Fairfax, Kan., and Doraville, Ga., plants will be down until March 6 for inventory adjustment and its Tarrytown, N.Y., plant remains closed for model changeover.

Overtime was slated last Saturday at GM's Lordstown, Ohio; Pontiac, Mich.; and Moraine, Ohio, plants.

Ford scheduled daily overtime this week at all its assembly plants except the facility in Edison, N.J.

Canadian cars up; trucks down

Canadian automakers targeted last week's build at 22,231 units, 8.69 percent more than the prior week's 20,454 and 12.43 percent more than the year-ago week's 19,773.

So far this year, 156,821 cars have been assembled, 10.58 percent below the 175,366 completed last year at this point.

Last week's scheduled truck production of 21,417 declined 3.86 percent from the previous week's 22,276 but increased 6.39 percent over the year-ago week's 20,131.

Chrysler Motors' Pillette Road plant in Windsor, Ontario, will be idled March 13 for inventory adjustment.

Ad firms await new GM slash

Spiffs may ease commission cut

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Advertising agencies that create and handle General Motors' $1 billion account will face a reckoning in 1989 as their client lowers the boom on commissions and forces them to find new ways to boost efficiency.

In the 1990 model year, GM will begin what is thought to be its final series of reductions of the commissions it pays to advertising agencies. Smaller GM accounts will live with commissions ranging from 10 to 12 percent, while commissions on large GM accounts — such as the $375 million Chevrolet account — will drop from about 10 percent to 9 percent.

GM shook up its agencies in 1985 when it said it would reduce commissions to cut costs. Reductions were phased over five years.

The new rates are a long way from the once-standard 15 percent commissions at GM agencies, but they fall within the ad industry's range of 8 to 15 percent.

As the agencies prepare for a lean 1990, GM and top agency executives have been discussing a new reward system that would pay incentives for effective, top-quality work. GM's Saturn unit is experimenting with a "risk-reward system" tying agency compensation to the success of the franchise.

Philip Guarascio — whose mission since joining GM in 1985 as executive director of advertising and strategic merchandising has been to get the most from GM's ad budget — is now focusing on ways to financially reward GM agencies that do good work. Guarascio has discussed such incentives with several top GM agency executives and other advertisers, but no plans have been made to institute them.

Guarascio

"I'm convinced that in the course of three to five years, we will continue to see major changes in the client/agency relationship and remuneration," said Guarascio.

"One aspect of that is to create reward systems and compensation programs."

He said the bonus would likely be based on the most important role an agency fills for GM — the creation of advertising. Car sales

One of SAE's stars

AUTOMOTIVE NEWS/JOE WILSSENS

One of the highlights of the SAE International Congress and Exposition was this Mercury Sable convertible, a concept car prepared by C&C (Cars & Concepts), Brighton, Mich. Plastics and electronics took center stage at the week-long event in Detroit, which attracted exhibitors from China, Australia, Italy and other nations. More than 39,100 engineers, designers and suppliers from throughout the world attended. **Story on Page 53.**

Production plans trimmed

But Greenwald, analysts expect incentives to stay

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Although U.S. automakers trimmed their second-quarter production schedules slightly from 1988 levels, some analysts believe the schedules are still too hefty and that the makers will therefore maintain incentives for months to come.

Automakers plan to build 2.02 million cars in the second quarter, down a hair from the 2.03 million assembled in the same three-month span of 1988.

Meanwhile, the domestic makers trimmed their first-quarter schedules slightly, compared to initial plans. The industry now plans to build 1.93 million cars this quarter, compared to 1.94 million initially scheduled (Automotive News, Nov. 21).

The revised first-quarter schedule calls for 13.47 percent more cars to be built than the 1.70 million assembled in the first quarter of 1988.

Michael Luckey of Luckey Consulting Group, Cresskill, N.J., predicted that extended and sweetened incentives will be needed in the second quarter to keep inventories in line with sales. Moderate production cuts may also help trim the schedules, especially at General Motors, "but I don't expect the cuts will be that big," he added.

Gerald Greenwald, Chrysler Corp. vice-chairman, predicted last week that incentives will continue through April.

Chrysler redirects LH project

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors has redirected development of its car platform for the 1990s to permit adaptation to front-wheel-drive or rear-wheel-drive vehicles.

The LH platform, under development since 1987, is Chrysler's first car platform to be developed since the K-car platform debuted in 1980. The new platform will be used on Chrysler's mid-size and full-size cars throughout the 1990s. Sedan, coupe and luxury versions are planned.

Under consideration is configuring the LH platform to permit a longitudinal engine mounting adaptable to fwd, rwd and all-wheel-drive models, sources said. Chrysler previously was considering using a transverse-engine configuration that would preclude a rwd version.

A longitudinal mounting would permit Chrysler to re-enter the rwd car market from which it withdrew at the end of 1988.

The Eagle Premier, which has a longitudinal placement, is being used as "a guiding light" as Chrysler investigates the new platform configuration, according to a company source.

One study proposes use of the Premier front suspension but calls for an altered rear suspension due to noise, vibration and harshness factors, the source said.

Extensive use of Renault componentry has been ruled out by company executives, however. The Premier was developed by American Motors — which Chrysler acquired in 1987 — and uses Renault componentry and powerplants, which are costly at current exchange rates.

Chrysler is redirecting LH platform development because the company's management determined it was "too big, too heavy, too long, too costly and lacked personality," according to a company source. "It was not a big enough change from what we have today."

Said the source familiar with the program: "The biggest problem was it had no personality and was noth-

DEALERS UP

Total rises 167 during 1988; census counts 25,105 outlets

By Edward Lapham and John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTERS

The number of dealerships selling new cars in the United States rose during 1988, although the number of dealerships selling imported cars declined.

The annual Automotive News dealership census found that on Jan. 1, there were 25,105 dealerships selling new cars, a gain of 167 outlets, or 0.67 percent, over the 24,938 dealerships selling new cars on Jan. 1, 1988.

On Jan. 1, there were 22,060 dealerships selling imported cars, compared with 23,436 one year earlier.

The decline in the number of dealerships selling imported vehicles was the result of a reduced number of Chevrolet dealers with captive imports — not all of them opted for the Geo franchise — plus elimination of the Renault-built Medallion as a captive import for the Eagle franchise. Medallion is no longer imported.

FTC requires Detroit dealers to stay open

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The Detroit Auto Dealers Association will appeal a Federal Trade Commission order requiring 53 dealerships to expand showroom hours. The order reverses an administrative law judge's ruling that Saturday closings did not violate antitrust laws.

The commission said dealers must stay open a minimum of 64 hours per week for at least a year.

They have 60 days to appeal the order, otherwise it goes into effect.

For the last 14 years, most Detroit-area dealerships have been closed on Saturdays, as well as Tuesday, Wednesday and Friday evenings. It is the only U.S. metropolitan area where most dealers

Profits rise for Europeans that don't rely on U.S.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Profits of Europe's once high-flying luxury-car makers dipped in 1988 while volume manufacturers soared to new heights.

And the figures made it clear that the less European carmakers had to do with the United States in 1988, the better off their bottom lines looked.

A soft U.S. luxury-car market undercut the profits of most of the competitors in that segment. Group profits at Daimler-Benz, Porsche, Jaguar and Saab fell in 1988. Last week, Saab-Scania reported its first pre-tax profit decline in 10 years.

Even thriving truck operations at Daimler, Volvo and Saab-Scania couldn't compensate entirely for car division setbacks at those companies. Only BMW saw profits rise.

However, profits at Europe's full-range producers are booming. Together, General Motors and Ford earned $3.37 billion in Europe last year. Peugeot S.A. said it exceeded the 7.5 billion franc ($1.21 billion) profit analysts had forecast. Fiat said group profits rose 23 percent last year.

Volkswagen AG said earnings improved in 1988, but results have been held down by overseas operations.

"We expect 1989 to be another good year for the volume manufacturers because the market is so strong and they sell most of their cars in Europe," said Sanjay Dabysing of DRI-Europe. "But the specialists are affected by the situation in the U.S."

New-car sales in Europe are expected to fall slightly in 1989, perhaps 3 to 4 percent, though the market has shown surprising strength.

But even if demand remains strong, there is concern about rising costs in Europe. Inflation and interest rates have edged upward, and there are signs of more aggressive discounting in some markets.

"What is important is the reaction of manufacturers to the slowdown," said Dabysing. "The volume manufacturers should continue to increase profits so long as there is no price war."

But there have been some ominous rumblings about the future. An internal European Commission study late last year said volume makers are threatened by an inability to match Japanese productivity and quality, have high levels of debt compared to Japanese and U.S. competitors and lack a non-European sales bases.

While volume manufacturers grapple with those problems, the specialists exporting to the United States still have an uphill battle to stabilize earnings in the weak dollar era.

"It increasingly appears that Jaguar, Mercedes-Benz, BMW and Porsche are competing in a market sector that is no longer swollen annually by converts from existing U.S.-built luxury cars," according to a report issued last week by the Economist Intelligence Unit in Britain.

A roundup of earnings by major European manufacturers follows:

BMW: Earnings rose in 1988 on the strength of an announced 26 percent increase in revenue to a record 24.5 billion marks ($13.2 billion). That was the company's fastest rate of growth since the mid-1970s.

However, analysts believe lower volume in the United States and the cost of bringing out the new 5 series may have stunted last year's earnings growth, though many analysts expect a surge in 1989.

Evaluating BMW's worldwide performance is tricky since the company announces only parent company results.

DAIMLER-BENZ: The company has confirmed that group net profits fell slightly in 1988 despite a sharp rise in truck sales. Last year was the second straight year of stagnant results at Daimler, where 1987 earnings of 1.8 billion marks ($989 million) were up only 0.8

Banks skirt car-loan woe

Tighter checks helped avoid captive firms' ills

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

In contrast to the financial subsidiaries of Ford Motor Co. and General Motors, the banks that finance auto loans are not having a problem with bad debt.

Preliminary results of a survey conducted by the Consumer Bankers Association also reveals that banks experienced significant growth in leasing last year.

The average bank is doing six times more retail loans through dealerships than directly to customers, according to Timothy Hinkin, assistant professor of management at the University of Virginia, who conducted the survey for the association.

"But a lot of business is going somewhere else," to the automakers' captive finance companies or to competing banks that are not financing the dealer's floorplan, Hinkin said.

About 200 banks responded to the survey, but their responses have not all been tabulated, Hinkin said. Final results of the survey will be out in April.

The Consumer Bankers Association is meeting in Tampa, Fla., this week for its annual Automobile Finance Conference.

Both Ford Credit and General Motors Acceptance Corp. reported lower earnings last year because of high loan losses.

But for retail banks, savings and loans and credit unions, "it appears as if past-due accounts as a percent of total accounts have been reduced slightly from the previous year," said Hinkin.

Hinkin believes the banks had a different experience from the captive finance arms because the finance companies "were very aggressive in lending to first-time buyers with very little money down, so they had more customers who may not be as creditworthy. That strategy may be backfiring."

Hinkin said he learned through contact with dealers that low interest rates stimulated so much business that the captive finance companies were swamped with applications. To process them expediently, "in evaluating them they erred on the side of leniency," Hinkin said.

The average maximum maturity of a new-car loan from a consumer bank was 64 months in 1988, up from 56 months in 1987. Banks are offering financing for up to 10 years on new car loans, with longer terms for foreign models, Hinkin said.

Direct loans to customers averaged about $8,000; loans through dealerships averaged $11,000. Hinkin said he didn't want to speculate on the reasons for the spread since the figures are preliminary.

Because the leasing business is so different from the lending business, "it seems two markets are developing," with leasing directed at the more affluent consumer, he said.

A greater percentage of lease applications were approved than loan applications last year. About 70 percent of the reporting banks involved in leasing activity said they experienced an increase in leasing last year, Hinkin said.

One reason is that tax reform has done away with the writeoff of interest expense, Hinkin said. Leasing is also attractive because it can result in a lower monthly payment, and the customer doesn't have to be concerned with disposing of the automobile, he said.

But banks are not taking advantage of opportunities to strengthen their relationships with dealers, according to Hinkin.

"The banks that are going to do well in the future are going to have to look more closely at relationships with dealerships," Hinkin said.

For instance, "a very small percentage of the banks are moving to automate their relationship with dealers" and most are therefore not taking advantage of an important marketing tool, said Hinkin.

Computers that connect dealers to the

2nd Honda plant prepares to build new car in 1991

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

MARYSVILLE, Ohio — When Honda America Manufacturing opens its second car plant in nearby East Liberty later this year, it will mean more than additional volume. It may signal the beginning of a broader range of Honda products built in the United States.

However, a decision on which model to add is still months away.

Honda's new East Liberty plant will start production in August and will spend an entire year building four-door Civics, similar to models produced at the present Marysville plant.

But company officials say a changeover will occur after a year, and the new facility is capable of producing any vehicle in the Honda lineup. Among the possible candidates for U.S. production are Prelude and one of the two Acura models, the Integra or the Legend.

U.S. sales of the Prelude fell from 79,841 in 1986 to 52,541 last year. Integra sales rose about 5 percent last year to 57,468, while Legend sales climbed about 29 percent to 70,770.

Both the Accord and the Acura Integra are slated to be revamped this fall.

With a production capacity of 150,000 units a year, the new Ohio plant will offer the company considerable flexibility.

Al Seitter, senior staff engineer for the $380 million new facility, said the East Liberty operation is more concerned now with successfully launching Civic production this year than with what will follow. But he added that a new model will replace the Civic after about 12 months.

He indicated Honda will make the decision on a new U.S. vehicle within a few months of this summer's production start-up.

It will take the plant about nine months to tool up for any model Honda makes, except the Acura Legend. That vehicle would take another three months to tool up, he said.

Seitter said the Legend requires a unique procedure in body painting that would mean either adding a paint booth to the East Liberty line or running the cars through twice.

Should company decision-makers in Japan decide to produce the Legend here, either paint shop option would be feasible, since Legend volume is still low enough to allow a double run-through, he noted.

Seitter said some East Liberty engineers are lobbying for Ohio production of the newly revealed Acura sports car, code-named NS-X, although he said such a decision was remote. The car is expected to sell in the $50,000-$60,000 range and go into production in mid-1990. Plans call for a run of 5,000 units a year, of which 3,000 will be marketed in the United States.

Honda leads its chief Japanese competitors, Nissan and Toyota, in the number of models it builds in North America, as well as in total U.S. production volume.

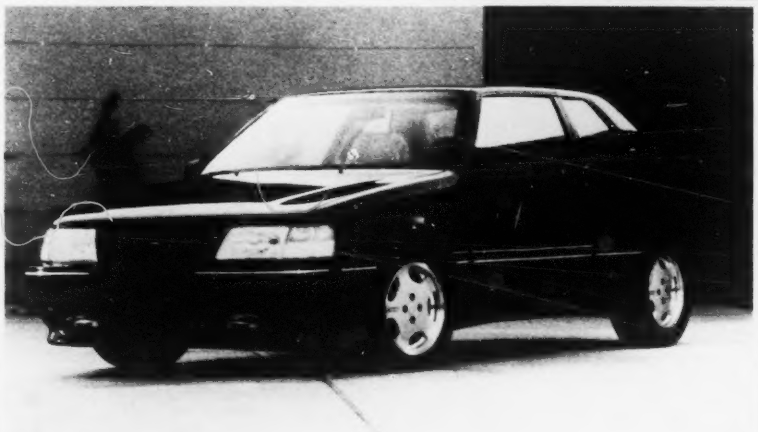
The seven-year-old Marysville plant produces 360,000 cars a year divided among Civic four-door sedans, Accord four-door sedans and Accord coupes. The company is also building 50,000 Civic hatchbacks a year in Alliston, Ontario, for the U.S. and Canadian markets.

Automotive News promotes Flax

Arthur Flax has been promoted to Washington bureau chief for Automotive News. He most recently was engineering and service editor and, before that, assistant truck editor. Flax joined Automotive News in 1984 from Transport Topics, a trucking industry publication based in the nation's capital.

Flax

He is a Washington native and a graduate of the University of Maryland, where he studied journalism and mechanical engineering.



Saab 9000 two-door

A two-door version of the Saab 9000-CD four-door notchback was scheduled to be unveiled at the Geneva auto show by ASC Inc. of Southgate, Mich. The conversion includes a front air dam with driving lamps and a rear deck spoiler. The car's suspension has been modified.

10-day results erratic

How accurate is sales data?

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

The last three months of 10-day sales reports on domestic cars have been so irregular that some analysts have been questioning their usefulness in tracking the auto market.

"I'm chagrined at the erratic pattern over the last months. There have been substantial reporting aberrations. It's mind-boggling when there are 80,000 more cars sold in the final 10 days of a month," said Michael Luckey of Luckey Consulting Group, Cresskill, N.J.

"The phones rang off the hook here a month ago," said a U.S. Department of Commerce representative who tracks retail-car unit and dollar sales. "There's some reason for a discrepancy, and we wondered if it were unique."

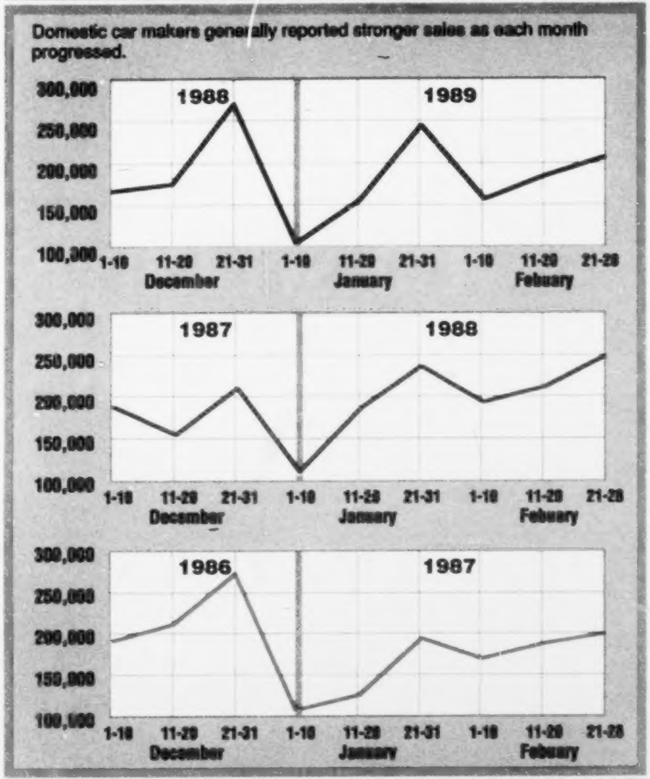
Ten-day reports give analysts, economists and marketers a chance to quickly analyze data, although many question its reliability. Originally, the 10-day numbers were supposed to be an informational tool. But over the years, "the informational tool by accident got a slight marketing push to it," said L. Ray Windecker, research and analysis manager for Ford Motor Co.

He pointed out there's something called "10-day tempo," in which low sales in the first period of a month encourage those in the industry to increase their efforts as the month progresses. That's why it's "virtually unheard of for a final period to have a lower sales figure than the first one or two periods," Windecker said.

Although there is a great retail sales push at the end of every calendar year, the final 10-day period of December 1988 particularly concerned analysts.

Early-December car sales declined 39,008 units from the final period of November. Both periods had eight selling days. Mid-month domestic-car deliveries rose by 8,208 units.

10-day sales fluctuate wildly



Domestic car makers generally reported stronger sales as each month progressed.

AUTOMOTIVE NEWS / K.B. GHOLSTON

Domestic sales dive 15% for February

Sales of new cars built in the United States slipped 15.49 percent in the final 10 days of February and were down 14.95 percent for the full month.

Retail deliveries for Feb. 21-28 were 208,521 units compared with 246,742 units a year earlier.

February sales this year totaled 552,042 units compared with 649,059 a year earlier.

The February sales decline followed a 4.04 dip in January.

For the month, Chrysler sales fell 29.72 percent, to 69,452 from 98,819 last year. General Motors was down 20.44 percent, to 264,089 from 331,917; and Ford Motor Co. was off 6.17 percent, to 165,962 from 176,878.

Toyota had a sales gain of 243.59 percent on sales of 11,390 units against 3,315 last year. Nissan dealers delivered 90.66 percent more units as sales rose to 9,005 from 4,723. Honda reported a gain of 1.17 percent, 27,926 vs. 27,604. Mazda, with 2,978, was up 63.09 percent over 1,826 in 1988.

Newcomer Mitsubishi sold 1,240 U.S.-built cars in February.

The final December period — Dec. 21-31 — surged ahead of the mid-month period by 96,400 units. There was one extra selling day in the final period. December's final 10-day sales were 30 percent above the same period in 1987. Both of those periods had nine selling days.

"The December (1988) bulge happened because there were some new sales incentives during the month, and a lot of dealers took advantage of the final period. It was really window dressing by the companies," said David Healy, analyst for Drexel, Burnham Lambert, New York.

Ronald Glantz, analyst with Montgomery Securities, San Francisco, suggested a number of reasons for recent 10-day results.

"There was a major push into

GM ready to merge 5 parts units into 2

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will announce this week that it will consolidate more of its components divisions.

The Inland and Fisher Guide divisions will be merged into one division. The Delco Moraine, New Departure Hyatt and Saginaw divisions will be grouped in a single division.

GM officials won't confirm that the announcement will be made this week. However, they said a study of the operations of Inland and Fisher Guide divisions has been under way since September 1988. A study of the Delco Moraine, New Departure Hyatt and Saginaw divisions began late last year.

Inland Division makes seating parts, interior trim, brake components, MacPherson strut mounting components and engine and transmission mounts. Fisher Guide makes lighting products, bumper and door systems and exterior trim.

Delco Moraine produces automatic transmission parts and brake components, including anti-lock brake systems. New Departure Hyatt builds wheel bearing systems, bearings, forgings and clutches. Saginaw Division produces components for steering systems, anti-theft devices, axles and brake parts.

The restructuring is not expected to result in plant closings or employee layoffs. Instead, the mergers are designed to group similar operations so that two divisions don't work on the same type of product in competition with each other.

The latest mergers are patterned after last September's consolidation of the AC Spark Plug and Rochester Products divisions into the AC Rochester Division.

Jan E. Tannehill, general manager of the AC Rochester Division, said at last week's SAE International Congress and Exposition that the merger of those two divisions did not result in plant closings or layoffs.

"We're still in the process of sorting out what our resources really are, what we need to do the job and what resources need to be re-allocated," Tannehill said, adding the process will take two to three years.

Tannehill said AC Rochester salaried workers are likely to be affected more than hourly workers because there are more redundancies between divisions in engineering.

"In some cases, we're realigning," Tannehill said. "In some cases, we're eliminating."

For example, both divisions before the merger were working on a drive-by-wire system — an electronic rather than a mechanical steering system. When the system was ready for production, both divisions would have competed in selling it. Now, drive-by-wire development has been consolidated into one area.

GM's strategy for its automotive components group, the umbrella organization for the parts divisions, is to group similar operations into strategic business units within the divisions so that they can work together on entire systems of vehicles, Tannehill said. In the past, groups within the components divisions worked on individual components that eventually went into a subsystem.

Under the new strategy, a number of divisions may work on a system. One division becomes the lead division, responsible for the total system. Its responsibilities include working with suppliers, engineering the product, pricing it and delivering it.

"It's a single point of contact with the customer so he's not dealing with several GM divisions," Tannehill said.

GM has been grappling with what to do with its components operations for several years.

In 1986, it launched what has come to be known as the "red light, green light, yellow light" study.

That study looked at every product made by GM's components operations. Money-making operations with world-class quality received a green-light designation. Yellow-light operations were borderline and were given an opportunity to become profitable. Unprofitable operations got the red light. GM said at the time the red-light operations, which represented 10 percent of its components operations based on sales, were unlikely

Auto industry skittish as interest rates climb

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

The highest interest rates in more than four years have sparked new worries about how the auto industry will fare in 1989.

Last month's back-to-back hikes in the prime rate — which increased from 10.5 to 11.5 percent in two weeks — have prompted economists to take a second look at their projections. There is fresh concern over whether the Federal Reserve Board will have to pursue an even tighter control of the money supply to reign in inflation.

The higher rates fueled predictions that automakers will have to rely increasingly on incentives, including discount financing programs, to keep sales moving. They gave every indication of that last week. On Thursday, Ford Motor Co. extended its incentive program for two more months, as did Chevrolet and Oldsmobile. Other GM divisions are expected to follow suit this week.

The programs could crunch the bottom lines at the automakers' financing arms, as they did last year. Both Ford Motor Credit Co. and General Motor Acceptance Corp. saw earnings decline in the 17-18 percent range last year. The falloff was attributed to narrower interest margins — the spread between what a credit arm pays for money and what it charges for loans — and high loan losses.

The prime rate climbed from 8.5 percent in February 1988 to 10.5 percent at year-end 1988.

Even before the current round of interest rate increases, analysts had predicted that automakers would rely heavily on incentive programs this year.

Second-quarter production schedules also reflected a sober outlook. After increasing first-quarter output by a projected 13 percent above year-ago levels, U.S. car builders, including transplants, are now holding flat with second-quarter plans. General Motors is scheduled to trim its output by 3.5 percent, and Chrysler by 13.7 percent (related story on Page 1).

At the retail level, meanwhile, dealers are viewing rising rates as another ominous sign in a year that is already shaping up as a challenge. At the very least, higher costs of borrowing are expected to put a chill into consumer confidence.

"I know there are some people who are quite alarmed," said Donald Hilty, Chrysler Corp. economist. "And I don't think there are any who say, 'Don't worry.' "

The consensus among analysts and economists surveyed by Automotive News before the start of the year was that interest rates would rise slightly during the first half of the year. It was believed that that would be enough to slow down the economy and cut the threat of inflation. The Fed would then ease up on the money supply and interest rates would fall again.

But when consumer price increases were tallied at a higher-than-expected annual rate of 7.2 percent in January, the Fed responded by raising the rate it charges to banks. Banks then hiked the prime.

Rates have "had to go a little higher than we thought," said George Eads, GM economist.

For snowmobilers
Waldoch Crafts, Forest Lake, Minn., created this Trailer Seeker van conversion for Arctic Cat enthusiasts who like snowmobiling. Waldoch worked with Arco, Arctic Cat's parent, to develop the theme. Its other theme conversions include the Elway Edition developed with Denver Broncos quarterback John Elway. Its packages are available on General Motors and Ford chassis.

V-8 free on big GM van chassis

Converter incentive seeks to boost sales of 3-speed automatics

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

General Motors introduced van-conversion incentives on full-sized van chassis equipped with three-speed automatic transmissions.

It also made new vans eligible for its upfitter package and for equipment discounts pertaining to that package.

Both programs took effect Feb. 16 and run through the the 1989 model year.

To promote sales of its three-speed automatics, Chevrolet and GMC are offering converters at no extra charge the normally optional 5-liter (305-cid) V-8 in full-sized chassis ordered with the three-speed automatics. The option usually retails for $555.

The offer applies to Chevy G-10 and G-20 vans and GMC G-1500 and G-2500 Vanduras.

Those vans have a standard 4.3-liter (262-cid) V-8 and a choice of a manual or three-speed automatic transmission.

GM has been promoting the three-speed automatic because of a shortage of four-speed automatic overdrive transmissions. Earlier this winter, Chevrolet and GMC required converters to order a percentage of their vans with the 5-liter/three-speed automatic combination if they wanted to get others with the 5.7-liter (350-cid) V-8/four-speed automatic package.

The new incentive makes it much more attractive for converters to do so.

GM doesn't offer the 5.7-liter V-8 with the three-speed automatic on vehicles below 8,500 pounds GVW because of corporate average fuel economy requirements. The Chevrolet G-10 and G-20 and GMC G-1500 and G-2500 models all fall into that low-weight category.

Chevrolet and GMC also released the converter package for their short-wheelbase three-quarter-ton G-20 and G-2500, respectively. The package still is not available in the short-wheelbase G-10 and G-1500 series, according to Jim Greene, Chevrolet manager of special vehicles. It is available on all other G-10/20 and G-1500/ 2500 van chassis.

Part of GM's rationale in extending the discount conversion package to the short-wheelbase model is to move more buyers into the full-sized G van. The new discount package makes the short-wheelbase models very price competitive with compact Chevrolet Astro/ GMC Safari conversions, which do not offer conversion incentives.

GM's compact vans have been in relatively tight supply.

Officials feel that a competitively priced full-sized conversion, with exterior dimensions close to those of the minivan, will swing marginal minivan prospects to the full-sized models.

The short-wheelbase G-van is a natural for the 5-liter V-8/three-speed automatic transmission combination, according to converters in the Elkhart, Ind., area.

GM's converter discount package, which has been in effect since the beginning of the model year, provides converters with $904 in discounts on a retail package of $2,600 worth of the most popular van-conversion options.

Some converters feel that the new programs will have a bigger impact on GMC than Chevrolet dealers because of the generally tighter supply of GMC conversion units.

The converter incentives are likely to be passed on to consumers since GM, unlike competitors, puts window price stickers and special package discounts on all its trucks. Ford and Dodge do so only in the handful of states that require the window stickers.

Except in states where it's illegal, GM dealers still have the option of removing the price labels. However, GM officials have been encouraging dealers to keep them to help consumers in price comparisons and shopping decisions.

Prime rate a threat to converter boom

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale shipments of van conversions reached a record high in calendar 1988, but recent increases in the prime lending rate are creating some concern in the industry.

With van converters shipping 17,000 units to dealers in December, the industry ended up with a 12-month total of 204,200 conversion shipments last year, according to the Recreation Vehicle Industry Association. That was up 12.26 percent from the previous record of 181,900 in 1987.

RV manufacturers wholesaled 427,300 units last year, 6.77 percent more than the 400,200 wholesaled in 1987. It was the best yearly total since 1978 when the industry shipped 526,300 units.

According to some converters, like Larry Laguardia, vice president and general manager of Aviator Conversions in Elkhart, Ind., "the seasonal upswing is now starting, and the spring market looks real strong."

However, the van conversion market is very fickle, and there is clearly some concern emerging about the impact of the rising interest rates. In the van conversion industry as in the auto industry, the higher the price, the more important the prime rate.

Aside from the prime rate, converters will have to contend with dealer inventory problems.

A number of dealers, particularly General Motors dealers, currently have high inventories of all products — not just van conversions. That makes them more selective about where they put their inventory dollars.

It will create a much more competitive situation for converters, who will find it more difficult to buy space on dealers' already overcrowded "shelves."

However, if the auto industry launches a particularly heavy blitz of new incentives — as it reportedly may do — the whole inventory issue could become moot.

Meanwhile, shipments of van chassis with the seat-delete option by Detroit manufacturers to converters — presaging future conversion activity — dropped off in December from the year-earlier period.

Detroit firms shipped 7,200 raw chassis to converters in December, down sharply from 12,000 a year earlier.

Compact chassis shipments made up 2,400 of December's total, down from 3,300 a year earlier, and full-sized chassis comprised 4,800 of the total, down from 8,700 a year earlier.

For 12 months of 1988, van manufacturers shipped a record 224,600 van chassis to converters, up from the previous high of 212,500 in 1987.

Conversion leaders expect strong market throughout '89

RV TRENDS

JOSEPH BOHN

Leaders in the van conversion market got off to a strong start this year, and they see a good market for the balance of 1989.

Among those firms are Mark III Industries of Ocala, Fla.; Starcraft Corp., Goshen, Ind.; and Glaval, Elkhart, Ind.

Mark III still has its sights set on volume of 800 to 1,000 units a week. It is currently churning out 600 conversions a week, according to Thad Boyd III, chief executive officer.

Boyd said the company is adding 200 people to its payroll and is expanding plant capacity during the next 90 days to accommodate up to 1,000 conversion units a week.

"Hopefully, we'll go to 800 to 1,000 units a week over the next six months," Boyd said.

Mark III has been a fast tracker, going from [illegible],000 sales in 1986 to 16,600 in 1987 and 22,500 last year. It now has more than 75,000 vans in the field, Boyd said.

Its growth is more remarkable since it doesn't have a Ford pool account. It is the No. 1 account with both Chevrolet and Dodge, doing about 70-80 percent of its business in Chevrolet chassis and the balance in Dodge and Ford, according to Boyd.

He rebutted the notion that his company uses dealer incentives, such as free floorplanning, to increase its market share. He said the firm relies on its low price — $2,995 for a full-sized conversion, including delivery — and quality to spark its growth.

Mark III is a closely held family business.

Starcraft, which has countered Mark III with its own $3,000 conversion package, has seen its deliveries increase 44 percent for the first five months of the 1989 model year, according to Ronald Chevalier, vice president of sales and marketing.

Starcraft closed February with a 58 percent increase in wholesale sales more than a year ago and is currently producing 410 units a week.

Chevalier characterized the year as a "big up for us," though he expressed some concern over the need for "good strong retail sales" to sustain the market's current pace.

"If we don't see strong retail, it could begin to back up units and affect our production schedules," Chevalier said.

At present, though, the company has no unsold chassis.

"Everything (Starcraft chassis) has a dealer's name on it," and the company's order backlog is still OK, Chevalier said.

Chevalier and William Becker, Glaval's vice president of marketing and advertising, admit using selective dealer incentives to help increase their market share.

As one of its incentives, Glaval reduced the price of its Princeton model to "break-even," Becker said.

It is also using its 1990-model Lexington, introduced as an early mid-year entry, to test the direction its styling and packaging will take for next fall.

"We expect to do more mid-year introductions," Becker said.

Conversion guide

Free copies of the new USA Today "Family Guide to Van Conversions" — a marketing tool for converters, dealers, their agencies and others involved in van conversions — are available through the Recreation Vehicle Industry Association.

Created by RVIA and its public relations agency, Burson-Marsteller, the four-page, full-color newspaper supplement is a reprint of a van ad section that ran in USA Today Jan. 30.

Dates and advertising have been removed from the guide to make it useful for all and to give it a long shelf life.

It combines articles and generic photos explaining the benefits of owning a van conversion. It also offers the latest news in van conversion technology, plus tips for consumers on how to select a model for their needs, including the importance of RVIA's seal in making a purchase.

Muffler shops fined by EPA

WASHINGTON — EPA has sent 109 notices of violation to muffler shops and other repair shops for installing improper aftermarket catalytic converters. The fines amount to more than $1 million.

This is EPA's second wave of notices for this type of violation. Last July, EPA issued 34 notices for about 400 violations and assessed liability for $475,000.

EPA said most violations involve installation of less effective two-way catalysts when three-way units, which control nitrogen oxides along with hydrocarbons and carbon monoxide, are needed.

Several companies failed to follow EPA guidelines; some installed converters on vehicles that were still covered by the five-year/50,000-mile emission warranties that call for original-equipment catalytic converters to be installed free.

'Modern' labor pacts work well, Chrysler says

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Top Chrysler Motors executives left St. Petersburg, Fla., last week elated over the progress being made at six plants with modern operating agreements.

Anthony St. John, Chrysler's vice president of human resources, said two years ago that achieving the change required by the new pacts would require changing attitudes that had built up over 40 years.

St. John said the Florida conference demonstrated all parties were up to that task.

At the meeting with UAW international leaders and over 300 union representatives from the plants, "all the right things were said," said Ray Rogers of Kepner-Tregoe, the consultant that has overseen team-concept training at the plants.

The new agreements include team production, "capability pay progression," or pay-for-knowledge, and a reduction in job classifications. The conference that kicked off the modern operating agreements was held in Mesa, Ariz., in January 1987.

"There is no bad news, in my opinion," Rogers said. "In Mesa two years ago, there were words and enthusiasm. Now there are words, action and determination."

Key Chrysler officials at the conference last week were Robert Lutz, president of Chrysler Motors; Richard Dauch, executive vice president — manufacturing; Forest Farmer, president of Chrysler's Acustar Division; and St. John.

UAW Vice President Marc Stepp, who will retire this year as head of the union's Chrysler department, also took part in the conference. Retiring UAW Vice President Donald Ephlin, a champion of participative management and modern labor agreements at General Motors plants, was on hand for a tribute to Stepp.

In the past, local officials have been leery of the modern agreements, and Stepp has said that outsourcing by Chrysler could undermine employee involvement.

Repeated attempts failed to reach UAW international officials for comment. The president of one local with a modern agreement deferred comment to the international.

Pat Sowell, committeeperson at the Huntsville, Ala., plant and a national bargaining representative, said the conference was "mostly positive." She said people were "working at getting the bugs out" of and adjusting to the modern agreement at Huntsville.

But it appears serious doubts about the pacts remain among the rank-and-file, according to Pam McGinnis, a dissident committeeperson at Chrysler's Newark, Del., plant, who did not attend the Florida conference.

She said some managers "are worse under the new contract," that "people feel the company is just running rampant, walking all over them," and that seniority rights are being curtailed.

But St. John said that at the conference, "participants were high and excited, and it was a universal observation that it was the best they had ever been to."

Farmer said fewer job classifications result in a more flexible workforce, and capability pay progression is an incentive for workers to learn more jobs in their teams.

Plants with the new agreements have been showing improved productivity and "improved uptime" in the past three to four months, said Farmer.

St. John said the A-car launch at the Newark plant last October was the best in Chrysler history, resulting in the fewest defects and best quality.

The new agreements, in various stages of implementation, cover more than 15,000 workers at six Chrysler plants: Newark; Huntsville; Trenton, Mich.; New Castle, Ind.; Indianapolis; and Jefferson Avenue in Detroit.

"Ultimately, Chrysler would like to proceed beyond those plants," St. John said. "We believe it is a way to become more competitive and to ensure job security and success in the marketplace."

But he said Chrysler and the UAW are focusing on the six agreements as a basis on which others can be built, St. John said.

At the conference, union and management personnel from the plants with modern agreements made their own plans, shared information with each other and heard from representatives from two other plants operating with team production: New United Motor Manufacturing Inc., Fremont, Calif., and General Motors' plant in Shreveport, La.

"There was not much emphasis on the problem side" of the new agreements, St. John said. Farmer said difficulties were put in terms of being different phases of the process.

Ford Motor Co. and GM have implemented their team-concept agreements plant-by-plant. By contrast, top Chrysler and UAW officials, joined by local union officials and managers from five plants, launched the team concept at the Mesa conference in 1987.

Each new agreement may take at least a total of three years to implement, said Acustar Chairman Thomas Stallkamp.

"The full advantages of modern operating agreements are still down the road," he said.

FORECAST

FROM PAGE 1

"I believe we'll see strong incentives and an increase in retail sales rather than a dramatic decrease in production," Greenwald said.

"Currently, we're seeing reduced showroom traffic. The present scenario looks like this: March, the beginning of spring, is traditionally a strong month. There will be strong incentives by everyone. The industry will be put to the test in March and April. I expect to see incentives continue."

Unlike the bullish schedules that GM frequently releases and then trims two or three times before the quarter's end, analysts predicted GM's second-quarter forecast will turn out to be reasonably close to its actual build schedule. The company forecast that it will build 940,000 cars during the second quarter, 3.53 percent below 1988's actual output of 974,416.

GM cannot afford to cut too much from its second-quarter schedule if it wants to gain market share, Luckey said.

"I think GM will have to offer more attractive incentives, particularly on certain models," said Thomas O'Grady of Integrated Automotive Resources, Wayne, Pa.

Both Luckey and O'Grady agreed that Ford Motor Co. is in the best shape of the domestics with its second-quarter schedule of 533,000 cars, 2.50 percent more than the 519,989 it built in the same period of 1988.

Chrysler Motors' inventory, sales and production are in fairly good balance, they said, but Luckey said the company may come under pressure by this quarter's end to improve its incentives because of inventory levels.

The company expects to build 277,000 cars during the second quarter, 13.73 percent below the 321,092 built in 1988.

Chrysler's second-quarter forecast includes the Spirit and Acclaim — models that weren't in production in the second quarter last year. But Dodge 600, Diplomat and Lancer; Plymouth Gran Fury; and Chrysler New Yorker and the four-door hatchback version of Chrysler LeBaron — all of which were in production during the second quarter of 1988 — have been discontinued.

BANKS

FROM PAGE 2

automakers' financial subsidiaries allow dealers to do a credit check on a potential customer in 10 minutes, Hinkin said.

"So far, only 5 percent of respondents have automated their relationship with dealers," said Hinkin. This could be due to the banks' resistance to change or because implementing a computerized system is expensive, he said.

Another reason is the industry has no standard for application forms and for the technology of a computerized processing system, Hinkin said.

Banks are missing another opportunity by not taking advantage of the link formed with dealerships when they lend money for floorplanning, Hinkin said.

"Only about 35 percent of floorplanned loans became retail loans" in 1988, versus 31 percent in 1987, Hinkin said.

"Some banks are lending a lot of money for floorplanning. It could be a 'You scratch my back, I'll scratch yours' situation. Some banks are doing it more effectively than others, but not many are using inventory turnover as a pricing tactic, and it's an unexploited opportunity," Hinkin said.

Banks could keep track of dealership inventory turnover and the amount of retail paper the dealership sends the bank and price loans to the dealerships accordingly, Hinkin said.

"It necessitates paying close attention to your business, and it's work," Hinkin said.

"If you sell 5,000 cars a year, I might be able to give you a break, vs. 300 cars," Hinkin said.

CHRYSLER

FROM PAGE 1

ing to nobody. The changes are being done to make the car unique."

It is not clear how the redirected LH development will affect Chrysler's car lineup in the 1990s. Last summer, company sources said Chrysler was trying to accelerate the program by one year. Until the platform goes into production, Chrysler must rely on hybrid variations of its 1980 K-car platform.

Chrysler plans to introduce the LH sedan for Chrysler-Plymouth and Jeep-Eagle in the fall of 1992 as a 1993 model, according to a company source. A Dodge version would debut as a 1993½ model. A coupe is also scheduled.

The sedan has been described by Francois J. Castaing, Chrysler Motors' vice president for vehicle engineering, as a "mid-sized American car most competitive with the Ford Taurus."

In addition, a planned LX luxury coupe will compete in the higher price market, Castaing said. In January, he said a size had not yet been determined.

An LY version, a large sedan, will replace the forthcoming Chrysler Imperial and Chrysler Fifth Avenue Y-bodies. The Y-bodies debut this fall.

Chrysler Motors President Robert Lutz said the recent reorganization of Chrysler's 6,000-person engineering department had not caused product delays.

Said a source close to the company, "The senior management will say no way are there program delays, which means they are scrambling to catch up. LH has been a jungle for two years."

The development of the platform apparently is related to the engineering department reorganization.

Chrysler said in February that engineering would be restructured so that engineers are assigned to specific vehicle lines. The company said the move represented "a major shift in direction" for Chrysler, which previously was divided into individual development sectors such as chassis or powertrains.

With the reorganization, Chrysler hopes its platform decisions will drive the development of powertrains, for example, rather than the other way around.

Chrysler studied Honda's engineering structure — similarly built around vehicle lines — before determining what changes to make in its engineering department.

"What we essentially went to is an American adaptive version of the approach used by Mazda and Honda where you have a so-called large project team," Lutz said last month.

"It is almost an entire mini-engineering organization led by a very powerful individual that has responsibility for the complete car line. They have electrical engineers, body engineers, aerodynamicists, engine people, transmission people and so forth. They live with the car from beginning to end. They are completely responsible for it," he said.

"It breeds esprit de corps," Lutz said. "It also means that that self-contained group generally doesn't have to ask other people for resources and be told, 'Yes, I will get to your door handle when I have time but meanwhile I have six other door handles to do.' It takes all that away. It ensures a focus on the total vehicle.

"If you pursue a straight component-oriented approach to vehicles, and you have one group doing great engines and another group doing great transmissions, it is not a foregone conclusion that when you put all these great components together that you have a great car. In fact, very frequently you don't," he said.

"It's a recognition of the fact that the component approach can get you good, reliable components but it can't get you great vehicles," he said.

Chrysler has created four main platform groups. One is focused entirely on LH. Another is the Jeep/truck engineering group. The third handles existing platforms and carryover models. The fourth is the Liberty program advance vehicle research and development group.

As part of the reorganization, G. Glenn Gardner was named general manager of new platform engineering responsible for LH. Gardner served as general program manager when Chrysler pioneered the minivan earlier in the decade. More recently, he headed the successful launch of Diamond-Star Motors as chairman of the Chrysler-Mitsubishi joint venture.

Lutz said the LH team will develop an unspecified engine for the platform.

Castaing has said Chrysler was contemplating development of a V-8 engine for passenger cars in the 4- to 4.5-liter range.

"If the fuel economy and fuel supply in this country do not become a real issue in the next five years — which we don't know yet — and if we see this is the trend of the industry, we need a small V-8 for our passenger cars," Castaing said.

Lutz said the engine would not be used solely by LH.

When asked how the Premier platform might be adapted, Castaing said, "Let's define what you call a platform. If you look at the platform as a set of an engine, a transmission and suspension, we are going to probably move away from that as fast as we can because of cost reasons.

"If we discuss a philosophy of north/south versus east/west engine, it becomes a much broader issue than the Premier platform. We have a study going on all of that, as well as rear-wheel-drive and things like that."

CENSUS

FROM PAGE 1

The number of dealerships selling domestic cars rose to 19,593 on Jan. 1, an increase of 0.32 percent over 19,530 on Jan. 1, 1988.

That increase was a rare occurrence indeed. It was the third time in the last 33 years that the domestic total has risen.

Because of dualing, the overall dealership total was 25,105 on Jan. 1, 1989.

The 1989 total consists of the 19,593 domestic outlets (most of them twinned with imports) and 5,512 that stock only imports. A year earlier, the breakout was 19,530 domestic and 5,408 import-only.

All figures in this article and in the accompanying tables refer to the net change in the dealership population.

The 25,105-new car dealerships on Jan. 1 represented 51,400 franchises. One year earlier, the franchise total was 46,506.

Factored out of import franchise totals for Jan. 1, 1989, and Jan. 1, 1988, were some captive imports including Conquest, sold by all Chrysler-brand franchisees; Colt and Vista, sold by all Plymouth and Dodge franchisees; Festiva, sold by all Ford franchisees; Tracer, sold by all Mercury franchisees; and LeMans, sold by all Pontiac franchisees.

Factored out for 1988 was Medallion, which was sold by all Eagle franchisees.

Included among domestics but counted as separate franchises are captive imports Merkur, sold by some Mercury franchisees; Chrysler TC by Maserati, sold by some Chrysler dealers; and Geo, sold by some Chevrolet dealers. Geo and TC Maserati are included for the first time.

The inclusion of Geo's 4,056 franchises accounted for much of the increase in the number of franchises for the industry. Conversely, the fact that all Chevrolet dealers do not handle Geo was a major reason for the dip in the number of dealerships at which imported cars are sold.

In 1988, Merkur franchises declined by 43.

Among the imports, a number of makes expanded their dealer organizations, and one new line entered the car market — Suzuki Swift.

Non-captive Japanese franchises increased 9.27 percent to 6,293 from 5,759. The biggest growth was in the number of exclusive dealerships. Non-captive Japanese makes reported a total of 3,337 exclusive franchises on Jan. 1, an increase of 15.71 percent from 2,884 one year earlier.

The number of franchises and exclusives will increase again this year when the Toyota Lexus and Nissan Infiniti dealer networks become operational.

Toyota's exclusive total remained constant at 674, but Nissan's rose to 602 from 584. Newcomer Suzuki reported 286 exclusives, while Daihatsu, which reported no exclusives on Jan. 1, 1988, added 25 last year. Honda, Acura, Mazda and Mitsubishi all increased their exclusive-franchise totals. Only Subaru among the Japanese makes reported a decline.

CAR DEALERSHIPS IN U.S.

(Adjusted for duals)

	Jan. 1, 1989	Jan. 1, 1988
Chrysler Motors	5,296	5,194
Ford Motor Co.	5,427	5,436
General Motors	9,450	9,535
Total Big 3*	**19,593**	**19,530**
Import exclusives	4,451	3,964
Import-only duals	1,061	1,444
Total new-car dealers in U.S.	**25,105**	**24,938**

* — Adjusted for intercorporate duals

Copyright 1989, Automotive News

Among the various nations included in the non-captive import franchise list, Japan, Sweden and Korea were the only ones to increase their franchise totals last year. West Germany, the United Kingdom, France, Italy and Yugoslavia all declined.

The annual Automotive News census found 19,593 outlets stocking Big 3 cars on Jan. 1, compared with 19,530 at the beginning of 1988.

Chrysler Motors added 102 car dealerships; Ford Motor Co. held steady with a slip of nine; and General Motors was off 85. A change in the number of intercorporate duals brought the net increase among the Big 3 to 63. Intercorporate duals are stores that handle under one roof cars produced by two or all of the Big 3.

An analysis of the Chrysler Motors increase shows that a truck line was the chief factor in its dealership gain — and in the industry's gain as well.

During 1988, the number of dealerships under the control of Chrysler-Plymouth Division rose by eight. The number under the control of Dodge Division also rose by eight. But the number under the control of Jeep-Eagle Division rose by 86.

Jeep is the hot hand in that division. The newly appointed Jeep dealer also takes Eagle in almost every instance, thus boosting the car-outlet count.

Last year was the sixth year in a row that Chrysler's corporate dealership total increased. Chrysler acquired American Motors in August 1987, adding the AMC dealer network to its own Chrysler, Plymouth and Dodge stores, but the Chrysler Motors total would have climbed in 1987 and 1988 even without AMC.

Ford Motor's minimal drop of nine outlets in 1988 compared with a loss of 24 in 1987 and was Ford's best performance since 1984. GM also posted its smallest decline in four years. GM's drop of 85 compared with a tumble of 145 in 1987. All of GM's 1988 decline occurred in the first half.

As noted, last year was only the third time since the mid-1950s that the domestic dealership total rose. After a gain in 1955, the count went down 27 consecutive years before turning upward slightly in 1983 and 1984. Then came three more drops before the 1988 upturn.

Franchise totals climbed for seven of the 12 domestic makes last year. Eagle led the pack with a gain of 142 franchises. Elsewhere under the Chrysler Motors umbrella, there were hikes of 27 for Dodge, 12 for Chrysler and 16 for Plymouth.

There were gains of 11 for Lincoln, 10 for Buick and seven for Mercury.

Showing declines were Cadillac and Oldsmobile, which each lost five; Ford, 19; and Chevrolet, 25. Pontiac's franchise total was unchanged for the year.

Chevrolet, with 4,885, has the most outlets of any make on the U.S. market — domestic or import. Ford Division is next with 4,561.

In addition to their car dealerships, Dodge has three that handle only trucks, Jeep-Eagle has 25 Jeep exclusives and Ford Division has 108 dealerships that stock only heavy-duty trucks. In this article and the accompanying tables, those stores are omitted from the corporate car-dealership totals and car-franchise totals.

Also, GM has 475 locations that sell GMC trucks but do not carry any GM makes of cars. The GM car-dealership figure is 9,450; its overall vehicle dealership count is 9,925.

Among the truck importers, Range Rover had 63 dealers on Jan. 1. Isuzu said it had 148 truck-only dealers, and Saab reported that it had 19 Scania truck dealers without Saab car franchises.

FTC

FROM PAGE 1

In the unanimous four-vote decision, the commission also ordered the association to run four advertisements per week for at least four weeks in Detroit's newspapers. The ads must inform the public of the new minimum hours of operation and the reasons behind the FTC requirement. Dealer advertisements also must disclose new showroom hours unless the advertisement is for a specific car.

Daniel Hayes, executive vice president of the dealer association, said the order is not effective until all appeals are exhausted, a process he said will take several years. The association is expected to appeal the decision to the U.S. Appeals Court in Cincinnati.

"We will be appealing the FTC decision, a decision which conflicts with a long line of important Supreme Court decisions that permit employers to act jointly to resolve labor disputes," Hayes said. The dealers maintain that the shorter hours are dictated by expressed contract demands of salespersons rather than anti-competitive collusion on the part of the dealers.

While naming only 53 dealers, the decision affects about 240 dealers employing 6,000 salespersons in the Detroit area.

The FTC decision, written by Chairman Daniel Oliver, reverses an initial decision made in July 1987 by Administrative Law Judge James Timony, who dismissed the 1984 FTC antitrust charges.

Timony ruled the restriction on dealership hours — which has been going on for almost 30 years — was immune from the antitrust laws because of the nonstatutory labor exemption to such laws. But the commission found the limited hours adversely affect competition and therefore overruled Timony's decision.

The FTC said the record shows that dealers agreed to reduce showroom hours because salesmen wanted a uniform, shorter work week. But the labor exemption from antitrust law — the major defense used by lawyers for the dealers, the Detroit dealer association and 16 other auto-related associations — exists to protect the free and lawful negotiation of collective bargaining agreements.

However, the FTC said in the Detroit case, the agreement to restrict showroom hours was struck among the dealers themselves and was not part of any negotiating sessions for a collective bargaining agreement covering salespersons.

In fact, the FTC notes, dealers and their associations admit "that, to the extent the agreement was motivated by labor concerns, it was designed to prevent collective bargaining."

Hayes disagreed, saying that although the dealers don't have a written contract, Judge Timony "said there was an expressed contract with employees." As a result, Hayes said the dealers are entitled to the labor exemption.

The commission countered that the mere fact that the salespersons benefited from the short hours is insufficient to warrant an exemption from antitrust laws.

The FTC order against 53 Detroit area dealers, if their appeal is unsuccessful, would require:

- **Dealers to remain open a minimum of 64 hours per week for one year.**
- **The Detroit Auto Dealers Association to run four ads per week in the Detroit News and Detroit Free Press, including Thursday and Saturday editions, explaining the new hours of operation required by the order.**
- **Individual dealer ads, including radio and television spots, to spell out new hours.**
- **Dealer association meetings to keep notarized transcripts of all business meetings, including board of director and committee meetings, for five years.**

"Taken to its logical conclusion, such an exemption would permit employers to fix prices in order to satisfy employee demands for higher wages — a proposition the Supreme Court has soundly rejected," the commission said.

In finding the agreement to limit showroom hours anti-competitive, the FTC said the shorter hours force some consumers to shift their shopping to times they otherwise might not have chosen. This means consumers have less time to do comparison shopping thus reducing "pressures on dealers to provide the prices, features and services consumers desire."

The commission said there is "no economic difference" between an agreement to limit shopping hours and one to raise prices.

During the lengthy trial, lawyers for the dealers said car prices did not rise in the Detroit area because of the limit placed on showroom hours. But the FTC said consumers lost convenience, service and leisure time.

The commission added: "Holding all other factors constant, we would expect car prices to have gone down in response to dealers' lower overhead costs." Keeping the price the same is "no different from increasing the price of a stick of chewing gum by keeping the package price the same but putting fewer sticks in the package."

In overruling Timony, the commission accepted almost all the orders proposed by its staff in December 1984. Those orders ban dealers from agreeing to a similar restrictive practice in the future and limits exchanges of information about hours of operation. After two years, dealers could exchange the latter data for use in lawful joint ads.

Hayes called the 64-hour requirement "a political decision by the FTC to support its staff" even though it rejected a specific proposal requiring dealerships to open on Saturdays.

During the trial, the FTC staff surveyed the hours of operation of dealers in four Midwest cities. Hours ranged from 60 to 68 hours per week.

Automotive News Staff Reporter Charles M. Thomas contributed to this report.

Output tale: Cars rise, trucks dip

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 149,660 cars last week, 2.02 percent more than the previous week's 146,691 and 19.18 percent more than the year-ago week's 125,578.

The 1988 week's output was affected by downtime at several plants due to slow sales.

So far this year, 1,339,723 cars have been assembled, 18.91 percent more than the 1,126,700 completed last year at this point.

Last week's scheduled build was split this way: General Motors, 45.10 percent; Ford Motor Co., 26.38 percent; Chrysler Motors, 13.23 percent, Honda of America Manufacturing, 5.33 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.83 percent; New United Motor Manufacturing Inc., 2.67 percent; Nissan Motor Manufacturing Co. U.S.A., 1.56 percent; Toyota Motor Manufacturing U.S.A., 1.34 percent; and Diamond-Star Motors, 0.56 percent.

Truck output was estimated at 91,991 last week, 2.99 percent below the prior week's 94,827 but 6.72 percent more than the year-ago week's 86,196.

Year-to-date, 819,563 trucks have been built, 8.79 percent more than the 753,349 assembled last year at this time.

Chrysler discontinued output of its Chrysler LeBaron and Dodge Lancer four-door hatchback models built at the Sterling Heights, Mich., plant last Friday. Sterling Heights will continue to produce the P-model Plymouth Sundance and Dodge Shadow.

GM's Willow Run, Mich.; Doraville, Ga.; and Tarrytown, N.Y., plants remain idle. Willow Run and Doraville are closed for inventory adjustment, and Tarrytown is down for model changeover.

GM's Fairfax, Kan., plant resumed operations today after a two-week shutdown for inventory adjustment.

Overtime was slated last Saturday at Ford's Lorain, Ohio; Wixom, Mich.; Wayne, Mich.; and St. Louis plants.

Car build jumps 8% in Canada

Last week's scheduled Canadian car production of 22,858 increased 8.83 percent over the previous week's 21,003 but dipped 2.08 percent from last year's 23,344.

So far this year, 178,451 cars have been produced, 9.90 percent below the 198,051 completed last year at this time.

Truckmakers targeted last week's production at 21,417, slightly below (0.45 percent) the prior week's 21,513 but 6.63 percent more than the year-ago week's 20,085.

Year-to-date, 186,345 trucks have been assembled, 9.25 percent more than the 170,563 built last year at this time.

Chrysler Motors' Pillette Road plant in Windsor, Ontario, remains idle until March 13 for inventory adjustment.

Europe braces for shocks, but not at Geneva

Product takes spotlight; sporty models featured

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — The European auto executives who gathered here last week were bracing for two shocks: a long-expected sales downturn and new Japanese marketing and manufacturing thrusts as the 1992 unified market draws nearer.

But neither threat was much in evidence last week as word of robust February sales circulated the show and Japanese makers adopted a lower-than-usual profile.

Geneva was instead a showcase for some bold steps by several automakers. Much of the attention was on image-building initiatives such as General Motors' low-volume Lotus Omega and Alfa Romeo's limited-edition ES-30.

There was also lots of attention given to new coupes and convertibles — some of which were discussed here but not shown.

Mercedes-Benz rolled out its new SL Roadster, the one event most likely to be remembered about Geneva 1989.

GM Europe announced plans for a new coupe; two West German converters showed Volkswagen Corrado convertibles in advance of VW's own; and America's ASC Design surprised Saab a little with a two-door 9000-CD.

Industry executives here expressed hopes that their consensus prediction of a 1989 downturn will not come true. Forecasters have been predicting for more than a year that a downturn is at hand. But unofficial industry sales figures from one manufacturer last week indicated a 10 percent increase in European sales in February, following an 11.5 percent jump in January.

The Japanese are holding market share steady at a politically sensitive time when the European Commission is on the verge of outlining a strategy for the local car industry. They were

Ford's Ghia studio offers a glimpse of motoring in the year 2000 via Ghia Via. The concept vehicle includes fiber optic headlights that can be programmed as spot or fog lamps, a removable photo-sensitive glass roof that filters ultravoilet radiation and a transverse-mounted V-8.

Toyota suit has boon for consumer

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Toyota Motor Sales U.S.A. has agreed to settle a class-action lawsuit involving Camry brakes by extending a recall that could cost the company more than $100 million and by setting up a consumer education fund that is unprecedented in the auto industry.

The agreement, involving 1983-86 and some 1987 Camry models, was approved last week by California Superior Court Judge Bernard Cooperman in Los Angeles. It ends the April 1988 suit brought against Toyota Motor Sales U.S.A in California by Kathleen Fjermedal on behalf of all similarly situated Camry owners.

The suit involved "excessive brake pulsation," which Toyota says does not affect brake effectiveness. While Toyota denied all liability and said the agreement is to avoid further controversy and litigation, the agreement may mean repairs to as many as 100,000 Camrys at a cost that could reach $100 million, according to an attorney for the plaintiffs.

Brake pulsation — a rough, uneven operation of the brakes — generally occurs while braking at moderate speeds. Neither the Center for Auto Safety nor NHTSA regard it as a safety-related defect.

The center said it had no reports of accidents when in January 1988

TWO FORDS

William Clay retires; son gets U.S. truck job

By David Versical and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

As Ford Motor Co. Vice Chairman William Clay Ford announced his retirement last week, his son prepared to leave Ford of Europe for a new job in the United States.

William Clay Ford Jr., the 31-year-old managing director of Ford of Switzerland, will take charge of manufacturing and engineering at Ford truck operations July 1. He will join the group in Dearborn, Mich., at the beginning of May for what essentially will be a two-month orientation.

The job is a new position within the organization and will include responsibility for Ford's huge heavy-truck plant in Louisville,

5% payout dead, but Stempel pledges to help GM dealers

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In a letter to dealers, General Motors President Robert Stempel said the automaker will help dealers clean out their stocks of 1989 models when the 1990 units arrive, but GM will not pay the traditional 5 percent carryover allowance.

Stempel said GM did not eliminate, but modified, its close-out allowance. He did not specify how GM will help dealers clear out past-model inventory nor how much GM will pay them.

In late February, GM divisions told dealers the payout will be determined later in the year.

Since the 1950s, GM has paid a dealer 5 percent of the retail price of the base car and factory installed options on each vehicle left

Car inventories: fatter, fattest

Domestics second highest on record; new high for imports

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

March always is a month of mad hares, lions and lambs and spring training, but this year it may become famous for sales incentives and bulging supplies of unsold automobiles.

Inventories of new imported cars reached record-high levels March 1. Inventories of domestic cars were the second highest on record.

Import stocks on March 1 totaled 720,056 units, representing an 87-day supply at current selling rates, compared with 682,152 units, an 82-day supply, a month earlier. The old record, reached March 1, 1988, was 702,748 cars and a 75-day supply. March 1 supplies averaged 46 days over the last five years.

Domestic-car stocks on March 1 this year amounted to 1,791,970 units, a 78-day stockpile. On Feb. 1, they totaled 1,724,158 units, an 85-day supply, and on March 1 last year, the domestic inventory was 1,608,461 cars, a 62-day inventory. The five-year average for March 1 month was 67 days. The record for inventories of cars made in this country was reached July 1, 1987: 1,900,096 units, a 77-day supply.

Combined foreign and domestic car inventories on March 1 totaled 2,512,026 units, an 80-day supply. That compares with 2,406,310 units, an 84-day stockpile, a month earlier and 2,311,209 units, a 65-day stock, as of March 1, 1988.

A great deal of attention has been focused of late on General Motors' inventories. Some analysts have been saying the size of the company's stockpile would force GM to launch vigorous sales incentives campaigns. GM started this month with 988,847 domestic and imported cars in stock. That was the equivalent of an 86-day supply at current sales rates. A month earlier, GM had 967,069 cars, a 98-day supply, and last year at this time, it had 980,637 unsold cars, a 66-day stockpile.

GM did indeed sweeten its incentives last week, as did Chrysler Motors. Importers kicked off a strong wave of sales stimulators.

L.R. Windecker, sales research and analysis manager at Ford Motor Co., said there is no optimum number of days for an automotive company's inventory. For years, 60 to 65 days was generally accepted as a desirable number.

"There is no 'optimum level of 60 to 65 days' because dealers establish their stock levels based on their requirements, and the seasonal levels vary," Windecker said.

As of March 1, Ford Motor's unsold-car inventory totaled 594,400 units, an 83-day supply, compared with 567,200, or 82 days, a month before and 488,601, or a 67-day stock, as of March 1 last year.

Windecker contends factors such as product complexity, model proliferation and the country's population growth make occasional sales records, inventory records and days-supply peaks inevitable. Inventories and sales over the long term run in waves with opposite motions, he said. As sales rise, inventories decline and as sales dip, inventories rise.

By market classification, the industry's stocks of new cars were divided this way on March 1: intermediate, 44.68 percent; compact, 22.95 percent; standard, 17.86 percent; subcompact, 13.69; and specialty, 0.82 percent.

By nation of origin, the inventory of imports shaped up like this: Japan, 62.19 percent; Germany, 15.14 percent and other nations, 22.67 percent.

Inventory figures include factory stocks, cars at dealerships and those in transit in the United States. Import numbers include port inventories.

Stodgy market receives incentive injection

By Laura Clark, Francis J. Gawronski and Jim Henry
AUTOMOTIVE NEWS STAFF REPORTERS

Trying to pep up a sluggish market, domestic and import carmakers unleashed a flurry of buyer and dealer incentives last week — just in time for the traditional spring selling season.

Chevrolet, Pontiac, Oldsmobile and Buick last week fine-tuned their incentive programs and added low-interest loan offers for many models. Chrysler Motors responded with a choice of loans as low as 4.9 percent or rebates on selected cars and trucks.

Imports also entered the fray last week: Toyota, Mitsubishi, Hyundai, Suzuki, Mazda, Isuzu and Peugeot announced consumer and dealer cash incentives on 1989 models. Volvo and Lotus also have incentives.

Domestic automakers went into March — traditionally a high sales month — with a 78-day supply but the second-highest number of units ever in inventory. Imports had a record number of units and an 87-day supply, compared to the 46 days usual for them on March 1.

The incentive panorama includes:

BUICK: Buick expanded the number of cars in its low-rate finance program from one to six until April 3. Buick is also offering consumers cash rebates as alternatives.

Buyers of 1988 and 1989 Skyhawk, Skylark, Century, Regal and Electra and 1989 LeSabre models, can receive loans between 4.9 percent for 24 months and 9.9 percent for 60 months.

As an alternative, customers can select rebates of $300 on Skyhawks, $400 on Centurys, $500 on Skylarks, $750 on 1989 Regals with the 3.1-liter engine and $1,000 on 1989 Regals with the 2.8-liter engine, $750 on all 1988 Regals and $1,000 on 1988 Electras.

Rebates on 1989 LeSabres and Electras vary by option package selected. They range from $400 to $1,000 on LeSabre and $500 to $1,500 on Electra.

On LeSabres and Electras in dealer stock or invoiced to dealers on or before March 7, Buick is offering additional discounts of $100 to $500 on option packages.

CHEVROLET: Chevrolet's new incentives include rebates or loans between 4.9 and 8.9 percent until May 2. There is no dealer financial participation required.

Rebates are $300 on Cavalier and $600 on Corsica and Beretta. Chevrolet is offering $750 on Celebrity models with four-cylinder engines and $600 on Celebrity models with six-cylinder engines. The low-financing option is not available on Celebrity.

The division is also offering dealer cash on selected models.

CHRYSLER: Chrysler Motors buyers can choose cash rebates or cut-rate loans on selected 1988 and 1989 cars and trucks. The loan rates are 4.9 percent for 24 months, 7.9 percent for 36 months, 9.9 percent for 48 months and 10.9 percent for 60 months.

As an alternative, the following rebates are offered: $300 on Dodge Aries and Spirit; Plymouth Reliant and Acclaim; Chrysler LeBaron convertible; and Dodge Ram 50, Ram Wagon and Dakota S.

Also, $500 on Dodge Omni, Shadow and Dynasty; Plymouth Horizon and Sundance; Dodge and Plymouth Colt and Colt Vista; Eagle Summit; Dodge Ram Van; Jeep Cherokee two-door and Comanche two-wheel-drive short-bed pickup.

Also, $750 on Dodge Daytona (except Shelby Z), Diplomat and Lancer; Plymouth Gran Fury; Chrysler LeBaron coupe and LeBaron GTS; Eagle Premier; Dodge Raider; and Jeep Comanche (except 2wd short bed).

Peugeot dealers are getting rebates as high as $2,000 on sales of 405 models

Chrysler is also offering $1,000 on Chrysler New Yorker, New Yorker Landau and Fifth Avenue; Dodge Dakota (except S model) and 2wd and 4wd 100 and 150 pickup trucks; and Jeep Grand Wagoneer.

In addition, the rebate is $1,500 on Dodge Ramcharger and $2,000 on Dodge Daytona Shelby, Chrysler Conquest, Eagle Medallion and Dodge 2wd and 4wd 250 and 350 pickup trucks (except diesels).

The Chrysler program began March 11 and has no cutoff date.

ISUZU: Isuzu is paying $500 to dealers for every car, except the Twin-Cam I-Mark, sold through April 14.

LOTUS: When a dealer sells a 1988 Esprit and buys a 1988 model, he receives $1,000 cash for the car he sold and another $1,000 for marketing funds for the car he purchased.

When the dealer sells a 1988 Esprit and buys a 1989 model from Lotus, he receives $500 cash for each. When the dealer buys a 1988 model without a qualifying sale, he receives $500 in cash and $500 in marketing funds. The program ends March 31.

MAZDA: Mazda is paying customers rebates of $400 on 323 models and $750 on 2200 pickups purchased through April 2, and $750 on MX-6 models purchased through April 30.

Mazda also is offering dealers a $299-a-month lease package on 929 models through Mazda American Credit.

MITSUBISHI: Mitsubishi is offering dealer rebates on 1989 Galants and 1988 and 1989 Sigmas and Monteros sold or leased. Dealers will receive nothing for the first three units sold or leased, $500 each for the fourth through 11th and $1,000 per unit for the 12th and above.

A second program involves the sale or lease of 1989 Precis, 2wd or four-wheel-drive 1988 and 1989 truck, Mirage and cargo van. Payments are $350 for units 4-11 and $700 for 12 and above.

Under Mitsubishi's consumer rebate program, the retail purchaser or lessee will receive $500 on a 1988 Precis and $2,000 on a 1988-89 Starion.

Salespersons who sell an eligible 1989 Galant, Mirage or Montero will receive a chance to win that same model in a drawing. They also receive $100. Mitsubishi's rebate programs run through March 31.

OLDSMOBILE: Until March 31, Oldsmobile is offering buyers a choice of cut-rate financing, a year's worth of gasoline or a cash incentive.

Loan rates range from 4.9 percent for 24 months to 9.9 percent for 60 months.

The free gas offer is worth $509 to $750, depending on model, Olds said. It is not available in Vermont.

Rebates are $300 on Cutlass Calais models not equipped with the Quad 4 engine; $500 on Cutlass Calais models with the Quad 4; $400 on Cutlass Ciera; $500 on Cutlass Supremes with the 3.1-liter V-6; $1,000 on Cutlass Supremes with the 2.8-liter V-6; $1,000 on 88 Royale and Customer Cruiser; and $1,500 on 98 Regency and Toronado.

There is no dealer financial participation required. The new program replaces all regional incentives.

PEUGEOT: Peugeot dealers are receiving rebates as high as $2,000 on sales of 405 models

Ford to cut supplier list by 400-600

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. expects to trim 400 to 600 suppliers from its North American supply base in the next few years as it heads closer to launching products under its global development program.

Some suppliers will be shed because they won't reach Ford's standards for quality, said Louis R. Ross, executive vice president, North American automotive operations. Other factors, such as the ability to serve Ford around the world, are growing in importance.

In North America, Ford gets its parts from 2,100 supplier locations. Nearly half of them have achieved the company's "Q1" award, which recognizes suppliers that meet a list of performance standards.

Ford has told its vendors that they must have a Q1 award by Jan. 1, 1990, to be eligible for new business. If a supplier doesn't reach Q1 status by 1992, it won't do any business with Ford.

But Ross said that a Q1 award in itself is no guarantee of future business. "It allows you to play poker," he said. "It doesn't mean you're going to win."

Ford and other automakers are relying more and more on "full-service suppliers" — those that can help design and develop groups of parts into automotive systems. In the process, many direct suppliers will become "second-tier" suppliers and provide parts to other, "first-tier" suppliers.

Under Ford's evolving product development strategy, vehicles will be developed in one country for sale around the globe.

The replacement for the U.S. Tempo/Topaz and European Sierra, for example, is being developed in Europe. But it will be assembled in that market as well as in the United States.

"As we pursue these global programs, we will require suppliers who have parallel global strategies," Ross said. "We will initially use the most capable regional suppliers, and later on we will move to those who are the best suppliers on an international scale."

FORD GAINS: *23% car-market share can be held — Poling*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. Vice Chairman Harold Poling said he believes the automaker can hold on to the market-share gains it has posted so far this year and finish the year with more than 23 percent of U.S. car sales.

Ford's sales for the first two months of 1989 were up nearly one percent over last year's, but the overall car market has fallen 10 percent, so Ford has boosted its market share more than two percentage points from year-ago levels, to 23.58 percent. It is the only domestic maker to improve its market share this year: General Motors has lost more than two percentage points and Chrysler Motors has lost more than one point.

While a two-month trend is not a significant pattern, Poling said he believes the company can hang on to much of its gain. Finishing the year at 23 percent would represent another strong increase in an intensely competitive market. In 1988, Ford boosted its car market share from 1987's 20.15 percent to 21.62 percent.

Poling also said he was still bullish about the industry's prospects for 1989 — despite back-to-back increases in the prime rate during February. At 11.5 percent, the benchmark lending rate now stands at its highest point in more than four years.

Ford began the year with the Big 3's most bullish sales projection: 15.4 million vehicle sales. Poling said he's not ready to back away from that forecast yet. But he believes the second quarter will be a strong test.

Many economists — including Ford's chief economist — had predicted that short-term interest rates would peak at mid-year and then decline. It was believed that the hike would slow the economy enough to keep inflation in check.

Poling suggested that any further hikes in interest rates could put an unexpected squeeze on the economy.

"Two increases in the prime in a relatively short period of time have probably caused some concern," he said. "But I think that the underlying strength of the economy still exists. Barring further action on interest rates, I still think we have the opportunity for a better-than-15 million year."

Speaking at the distribution of profit-sharing checks to workers at the Dearborn assembly plant, where the Mustang has been built since its introduction 25 years ago, Poling said Mustang will survive beyond the "early 1990s" if sales hold up at current levels.

So far, the Mazda-built Probe — originally slated as a successor to Mustang — has had no apparent effect on Mustang sales.

Last year, Mustang sales dipped by less than 2 percent to 170,000. This year, they're up 7 percent.

The average Ford payout for hourly and salaried workers was more than $2,800, the company said. In all, 152,407 employees shared $463 million.

Last year, the average payout was $3,700. Although the corporation earned more in 1988 than it did in 1987, the profit-sharing payment was lower. The payout is based on profits as a percentage of sales from U.S. automotive operations, which declined.

NHTSA blames pedal position for runaways

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A long-awaited NHTSA study concluded unintended acceleration is caused by drivers stepping on the gas rather than the brake pedal, but left numerous unanswered questions about individual cars that the government will continue to investigate.

The report by the Transportation Research Systems Center, the Cambridge, Mass., research arm of the Department of Transportation, said that shift locks appear to partially remedy the sudden acceleration problem.

The report's recommendation that shift locks be considered as a solution does not mean the government will require the devices, NHTSA said. With automakers voluntarily installing shift locks on cars that were reported to suffer from unintended acceleration problems, there may be no need to mandate their installation, said George Parker, NHTSA associate administrator for enforcement.

"It is too early to say whether we will have to require shift locks. Manufacturers need to look at this report and be sensitive to the problem" of unintended acceleration, Parker said.

NHTSA has launched a more detailed study to determine whether there is a correlation between sudden acceleration and the position of pedals that results in drivers hitting the accelerator rather than the brake, Parker said.

"The report did not go far enough to suggest what would be an optimum pedal placement," he said.

"Cars that have a high complaint rate have pedals that are very close together, but there are also cars with the same pedal placement that don't have a high complaint rate," Parker said.

While the year-long study concluded sudden acceleration is a driver — rather than mechanical — problem and looked at 10 models reportedly plagued by the problem, it did not automatically exonerate individual automakers from further scrutiny.

The report ruled out several theories on the cause of sudden acceleration. including cruise control, electromagnetic/radio frequency interference, electronic idle speed control, computer-controlled fuel injection systems, transmissions and brakes.

The initial study was launched because of the repeated reports, injuries and deaths attributed to problems with the Audi 5000, although many other makes have been investigated.

"We only asked the contractor to investigate the possible causes of sudden acceleration. We still need to determine how widespread the problem is," Parker said.

The report does not specifically address complaints of unintended acceleration which plagued the 1976-1988 Audi 5000 and four other types of cars — 1986-88 Mercedes-Benz 300; the 1986-1988

Mazda faction battles UAW establishment

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

An election campaign mounted by the New Directions Coalition at Mazda's new plant in Flat Rock, Mich., is pitting a group of disillusioned workers against local union officers appointed by a UAW regional director.

The incumbents admit to problems juggling Japanese flexibility with the union's rights, but they contend the union is making headway.

The struggle provides a glimpse into the evolution of a local union at a Japanese transplant where workers expected more teamwork and consideration. The dissidents say the American managers at the plant do not treat workers with the "dignity and respect" touted in orientation.

The dissidents — who claim 500 signed endorsements of their platform — will try to win offices in the plant's first elections April 18. The Mazda plant employs about 2,770 workers.

Last week, the conflict led to a complaint of unfair labor practices filed against Mazda by the National Labor Relations Board in Detroit. The complaint was based on charges by New Directions leader Phil Keeling.

The eight-count complaint names 26 top supervisors including James F. Korowin, vice president — manufacturing, and Penny Morey, director of labor relations.

In the complaint, the labor board alleges Mazda issued several unfair rules. Those rules require workers to gain company approval before distributing literature, and off-duty workers are prohibited from distributing literature at the plant. The board also alleges rules prohibit workers from wearing buttons and insignia on uniforms and posting anything but company-approved literature on bulletin boards.

A Mazda supervisor is alleged to have told an employee that a New Directions button showed dissent toward the company. Another supervisor is alleged to have confiscated New Directions literature. A hearing is set May 30 in Detroit. New Directions members said they believe that through the rules and prohibitions, Mazda is trying to suppress their movement.

A Mazda spokeswoman said Friday that the National Labor Relations Board had not contacted the company and Mazda "had no comment on any NLRB action."

But she said, "We respect the rights of our employees to express their opinion and we have not interfered with that right. We have policies that insure cleanliness and safety and that prohibit wearing jewelry or buttons on the production line that interfere with safety or with the quality of the vehicle. But (workers) can wear personal items at any other time, such as during breaks in the cafeteria."

The size of the New Directions group at Mazda is significant because caucuses at traditional plants "tend to be the property of a few politicians," said Jane Slaughter, a staff writer for Labor Notes, a newsletter sympathetic to dissident unionists.

"At older plants, people are pretty cynical. They've seen caucuses come and go," she said.

Members of New Directions at Mazda say they are not dissidents, because most plant workers are dissatisfied. UAW observers say the coalition's victory is by no means assured.

At Mazda, raised expectations have met hard realities. During employee orientation, teamwork in a Japanese plant was depicted as radically different from traditional factory work.

"Maybe some trainers projected it as sort of a country club," said Bob Ramp, a union representative at Mazda's UAW Local 3000.

Others say that the discontent among Mazda

Trucks dip for month and year

U.S. lines, imports share sales decline

Dealers sold 5.31 percent fewer domestic and imported light trucks in the first two months of 1989 than they did a year ago as February deliveries tumbled 10.75 percent.

Two-month deliveries totaled 701,203 units compared with 740,548 last year. February sales this year dipped to 356,766 units from 399,741 a year earlier.

Domestic light truck sales — pickups, vans, minivans and sport-utilities — fell 12.00 percent in February to 307,169 units from 349,039 a year ago. In the first two months of this year, they were off 4.42 percent and totaled 603,473 units against 631,362 in 1988.

Sales of imported trucks in February eased by 2.18 percent to total 49,597 units compared with 50,702 last year. For two months, sales totaled 97,730 units compared with 109,186 in 1988, a dip of 10.49 percent.

Nissan dealers were among the few retailers bucking the trend to any significant degree. They delivered 15,230 light trucks in February compared with 11,688 a year ago. Through February, Nissan's sales totaled 29,177 units compared with 26,761 in 1988.

Overall, only a few other increases in sales were reported.

Isuzu dealers, for example, moved up to 6,873 sales in February from 5,808 and for the two months totaled 13,499 units against 12,818 a year ago.

Range Rover sales in February climbed to 341 units from 278 and for the two-month period were 836 compared with 525 last year.

LIGHT-DUTY TRUCK SALES

Class 8 orders rise to beat price hikes

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Heavy-truck orders reached a record level in January as many buyers rushed to beat price increases.

The industry faces major increases next month.

The new hikes, expected to average as much as $2,200 a truck for some manufacturers, stem largely from boosts by engine and component suppliers.

Cummins raised engine prices an average of slightly more than 4 percent. Caterpillar and Detroit Diesel followed quickly, the latter with a hike of nearly 6 percent.

Those increases do not take effect until summer. However, because of the industry's strong order backlog and stretched-out delivery time, they will begin affecting vehicle orders next month.

As David Healy, analyst with Drexel Burnham Lambert of New York, pointed out, backlogs of unfilled Class 8 orders were up 32 percent in the December-January period "and now stretch out to five months' production."

January's order intake translated into an annualized U.S. Class 8 sales rate of more than 250,000 vehicles, according to Frank Prezelski, financial analyst with Deutsche Bank Capital of New York. The industry sold only 173,000 Class 8s in 1979, its best year ever.

Truck manufacturers have been raising prices since last fall, causing some degree of pre-buying.

Navistar announced a 4 percent price hike last fall; Mack, a 1.5 percent hike in December; Freightliner, a 2.5 to 3 percent hike in January; and Kenworth, a 4 percent hike in February. Those increases preceded the recently announced increases by Cummins, Caterpillar, Detroit Diesel and other Class 8 component suppliers.

Terry Young, marketing director for Volvo GM Heavy Truck, estimated prices in the industry could rise another $600 to $1,200.

Edward Raniszewski, director of marketing communications for Mack Trucks, said that if prices go up 4 percent, as some people in the industry believe, it would translate into a $2,200 increase, based on the average $57,000 to $60,000 price of a Class 8 truck.

There is no uniformity in the industry's increases.

Some manufacturers, such as Kenworth and Peterbilt, are heavier users of expensive aluminum for their cab production, for example, making them prone to seek bigger increases.

Raniszewski sees the current actions as "an attempt on the part of the industry to raise prices because they've been held so low for so long. Materials prices have really been escalating."

Most industry officials see the first half of 1989 as very strong and the second half as weaker. The real debate is over how much weaker. That won't be known until March-April order boards are tallied.

Meanwhile, as Prezelski pointed out, the strong demand is enabling manufacturers and suppliers like Cummins to take some real profit — not simply recover part of their costs, as they did when they raised prices last fall.

Cummins officials told a meeting of security analysts recently that after a heavy loss in 1988, they expect earnings per common share to exceed $1 in the quarter ending April 2 as a result of price increases, favorable acceptance of their B- and C-series engines and consolidations in operations.

Cummins plans to sell some operating units in its business information and services group, including Cummins Financial, and receive about $60 million in net cash proceeds.

Navistar adds Class 8 tractor to 9000 premium series

By Robert Deierlein
STAFF CORRESPONDENT

FORT WAYNE, Ind. — Navistar International has introduced a new aerodynamic conventional Class 8 tractor, the International 9400, as an addition to its 9000 premium-line series.

The 9400 model is being built at Navistar's Chatham, Ontario, plant, with full production scheduled to begin in April.

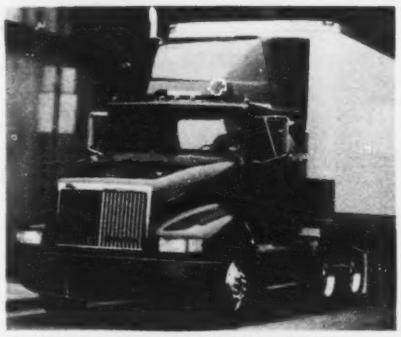
Randy Dennis, Navistar general manager, heavy-duty products, said the design of the new aerodynamic conventional set-back front-axle model will result in significant improvements in fuel economy, maneuverability, ride and performance.

It also is lighter and easier to service for the truckload private carriers and owner-operator buyers at whom the vehicle is targeted, Dennis added.

The new vehicle features front bumper air fairings and a three-piece, rounded front bumper that cuts headwind and reduces the under-truck turbulence associated with conventional-style tractors.

That also helps control the air flow along each side of the vehicle, eliminating any billowing effect from the front wheels, according to Dennis.

The vehicle's hood is 10 inches lower than on other 9000 series models. The truck has rounded fenders; flush-mounted turn signals and headlights; cab roof fairings and side extenders, which are standard on all Navistar's 9400 models with 42-inch and 60-inch flat-roof sleeper boxes as well as on non-sleeper versions.



Navistar's newest — the 9400 tractor

It also features side skirts running from wheel to wheel that manage air flow along each side of the tractor and an optional exterior sun shade located above the windshield that further reduces the drag associated with sun visors.

Company officials said those features will improve the fuel efficiency of the 9400 model 4 percent to 7 percent over a comparable International 9300.

To enhance maneuverability and reduce turning radius, the vehicle's front axle is set back 50 inches from the front bumper.

To improve ride, the truck uses 58-inch taper leaf front springs, premium shock absorbers and one-piece, high-strength drop center frame rails. Weight has been reduced through the use of an all-aluminum cab.

The new model offers a choice of powertrains, including Cummins or Caterpillar diesel engines up to 444 horsepower, and a new crossflow, center-mounted radiator designed to increase the cooling capacity of the higher-horsepower engines.

The vehicle also has a high degree of parts commonality with other 9000 models.

To improve serviceability, access to the rear cab has been incorporated into the wheel-to-wheel side skirting, and the battery boxes are accessible without removing the skirting.

The new tractor has a one-year/100,000-mile warranty on the chassis, which covers 100 percent of parts and labor costs.

It has a five-year/300,000-mile warranty on the Dana transmission and axle and a three-year/300,000-mile warranty on other transmissions and axles, which also covers 100 percent of parts and labor costs. Additional extended warranty coverage is available at extra cost.

CAD system cuts Navistar 9400 development time

FORT WAYNE, Ind. — Navistar's Technical Center provided most of the engineering and design testing for the company's new 9400 model. The center used its advanced computer-aided design capabilities and physical test equipment.

Tech Center officials said they were able to reduce product-development time, investigate increased numbers of design options and generate a common database for remote engineering support, plant engineering and vendor information exchange.

They cited design and development of the 9400's hood, inner reinforcements, side skirts, fender extension, grille, underhood packaging and chassis-related component packaging as examples.

They said that from concept to design completion, creating designs manually for such componentry would have required 49 weeks. Creating a die model of the vehicle would have required an additional 26 weeks. However, with the Unigraphics system, it required only 14 weeks and five weeks, respectively.

Similarly, from concept to production, manual procedures on the same vehicle would have required 30 months, but with Unigraphics it took only 12.

Short month brings short market

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Some U.S. retailers of automobiles must be relieved that February is a short month.

Sales in the 24 selling days were dismal with bright spots a distinct rarity.

Combined sales of domestic and imported cars fell to 750,867 units, down 15.09 percent from the 884,275 delivered by dealers in February last year.

Sales of domestic cars totaled 552,042 units, off 14.95 percent from 649,059 a year earlier.

MARKET SHARES, Feb. 1989

	Total Sales	Pct. of Total
SUBCOMPACT	76,527	10.19
COMPACT	140,554	18.72
INTERMEDIATE	238,013	31.70
STANDARD	94,482	12.58
SPECIALITY	2,466	0.33
IMPORT	198,825	26.48
TOTAL	750,867	100.00

Retail deliveries of imports eased 15.47 percent in the month to total 198,825 cars vs. 235,216 in the year-earlier month.

There was one more selling day in February 1988.

Imports captured 26.48 percent of the market in February and 27.60 percent for the first two months of this year.

The daily selling rate in February this year averaged 22,985 units, off 11.47 percent from 25,962 per day a year earlier.

Japanese makers and Ford Motor Co. enjoyed market share increases for the month. This is how the market was divided in February, with February 1988 shares in parentheses:

General Motors, 35.52 percent (37.92 percent); Ford Motor, 23.58 percent (21.25 percent); Japanese, 23.48 percent (20.74 percent); Chrysler Motors, 10.43 percent (11.75 percent); European, 5.00 percent (5.61 percent); and Korean, 1.99 percent (2.73 percent).

For the year through Feb. 28, combined domestic and import sales totaled 1,467,733, off 10.77 percent from sales of 1,644,957 a year before. Domestics, with a total of 1,062,609, were off 9.97 percent from 1,180,284 units sold in the first two months of 1988. Import sales totaled 405,124, down 12.82 percent from 464,673 a year ago.

Mitsubishi Motor Sales of America reported record high any-month sales of 6,517 cars in February, up 25.25 percent from sales of 5,203 last year.

Among the higher-priced cars, where much interest is focused these days, gains were reported in year-to-date sales for BMW, Jaguar, Lincoln, Peugeot and Volvo.

Sales of Yugo in the first two months of 1989 fell to 1,631 units from 5,358 in the similar 1988 period. Sales of Sterling cars through February slipped to 1,400 units from 2,117 last year.

January car sales dip in Canada

Domestic-import total falls 8%, but trucks post slight increase

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — The long predicted downturn in Canadian car sales finally arrived — not surprisingly — in the dead of winter.

January's combined sales of domestic and imported cars slipped 8.57 percent to 53,986 units, down from 59,045 a year earlier. Sales of domestic and imported trucks, however, managed to register a slim 1.89 percent gain, totaling 29,032 units.

The industry sold 83,018 domestic and imported cars and trucks during January, a 5.15 percent dip from the year-earlier period.

The Big 3's sales of domestically produced cars dropped 11.46 percent from the year-earlier period. Chrysler slipped 20.94 percent, from 7,934 cars to 6,273. Ford was off 9.81 percent, while General Motors lost 8.50 percent.

Jack Clissold, Ford of Canada's vice president — sales and marketing, said the sales drop should not be interpreted as a trend.

"We don't read this as any indication of a sustained slowdown in the marketplace," he said. "Consumer confidence remains high and we're looking forward to brisk early springtime sales."

January 1988 had been a particularly strong month for the company, as Ford Tempo and Mercury Topaz sales surged following a three-month plant changeover.

Optimism also was echoed by Bill Atkinson, GM of Canada's vice president — sales, service and marketing.

"This somewhat slower vehicle sales volume in January is understandable as we are coming off a tremendously strong sales month in December. We are optimistic sales will return to greater levels in the months ahead," he said.

Imported-car sales fell 13.84 percent, compared with January 1988. Volkswagen dropped 27.82 percent; Subaru, 16.46 percent; Nissan, 16.41 percent; Hyundai, 11.30 percent; and Toyota, 7.08 percent.

Chrysler's and GM's import sales gained 25.71 percent and 7.78 percent, respectively. Among upscale imports, Saab posted a 24.73 percent gain, from 93 to 116 units, while Mercedes-Benz's sales increased 20.78 percent. Jaguar slipped 21.25 percent.

On the truck side, imports rose 38.10 percent. Mazda's new MPV helped the company post a 95.06 percent gain over January 1988. The company sold 829 trucks, compared with 425 for the year-ago period.

Suzuki sales were up 49.05 percent on the strength of its new Sidekick model. Nissan's sales, however, were off 5.84 percent.

Domestic truck sales were all down marginally: Ford, 3.31 percent; Chrysler, 2.93 percent; and GM, less than one-tenth of a percent. Overall domestic truck sales decreased 2.25 percent.

Clean-air onslaught begins in Congress

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The auto industry is beginning to feel the sparks of what promises to become a heated debate over clean-air legislation.

At a hearing before the House Energy and Commerce Committee's Health and Environmental Subcommittee, several medical experts cited car emissions as a major source of ozone pollution. Several doctors said ozone poses a significant health risk to children and even unborn fetuses.

Their testimony was countered only by a General Motors doctor, who argued it would take excessive amounts of carbon monoxide to cause harm to healthy humans.

The hearing was one of the first involving a wave of legislation that will attempt to revamp air pollution laws last amended in 1977. The time limit for non-attainment areas to meet clean-air goals has expired. Ninety-six cities failed to meet met air-quality standards for ozone or carbon monoxide by Dec. 31, 1987.

Congress last year extended that deadline six months, but failed to adopt amended legislation before it adjourned last fall.

The Bush administration has promised to introduce its clean-air package in late spring. The auto industry has already mounted heavy lobbying campaigns, fearing the industry could be subjected to extensive new emissions regulations.

Dr. Christopher C. Green, director of GM's biomedical research, testified before the committee that healthy young volunteers were exposed to the currently permitted amounts of ozone for 6.6 hours in controlled chambers and exercised "at a level that far exceeds what most people could sustain for even a few hours."

GM's studies showed the subjects had deviations in lung functions because considerably more ozone was drawn into the lungs, Green said. But the variations in lung functions were reversible, he said.

Recent studies have also failed to support claims that the elderly are at greater risk from ozone exposure, and experiments have demonstrated that older men and women were "far less responsive to ozone than the younger subjects," Green said.

He cited other studies with cigarette smokers, individuals with chronic obstructive pulmonary disease and children that drew similar conclusions.

"In short, there is little evidence, in spite of a great deal of study, to suggest that age or pre-existing respiratory disease predisposes individuals to excess susceptibility to ozone effects in today's ambient environment," Green said.

But Green's testimony was countered by the other expert witnesses, who presented medical studies that showed ozone's detrimental effects.

Dr. Philip Bromberg of the University of North Carolina School of Medicine said carbon monoxide can pass through the blood of a pregnant mother into the fetus and harm it. Dr. Philip J. Landrigan of the American Academy of Pediatrics said heavy exposure to ozone can result in a premature loss of lung elasticity.

Trucks set Feb. record of 381,046

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers cranked out enough units last month to beat the record they set in 1988. Assembly of 381,046 units in February was the highest ever for that month, surpassing the 351,498 built last year.

Last month's truck production fell 226 units short of the January total of 381,272.

Truckmakers scheduled 90,909 units to be built last week, 3.94 percent below the prior week's 94,638 but 3.98 percent more than the year-ago week's 87,429.

Car output for February totaled 609,024, 4.56 percent below January's 638,129 but 8.08 percent more than the year-ago month's 563,508.

Last week's scheduled production of 146,369 cars dipped 4.68 percent from the previous week's 153,560 but rose 7.20 percent above the year-ago week's 136,534.

Companies split last week's targeted output as follows:

General Motors, 47.02 percent; Ford Motor Co., 25.95 percent; Chrysler Motors, 12.09 percent; Honda of America Manufacturing, 5.29 percent; Mazda Motor Manufacturing (USA) Corp., 3.31 percent; New United Motor Manufacturing Inc., 2.73 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.60 percent; Toyota Motor Manufacturing U.S.A., 1.38 percent; and Diamond-Star Motors, 0.63 percent.

GM's Reatta Craft Centre in Lansing, Mich., was closed last week because of slow sales. The plant was scheduled to resume output today.

GM's Doraville, Ga., plant remains idle until March 20 for inventory adjustment.

Trucks at peak in Canada, too

Along with their U.S. counterparts, Canadian truckmakers set a record last month. Production of 86,770 trucks in February was the highest ever for that month, surpassing the prior peak of 80,177 in 1988.

February's truck output was slightly above (0.57 percent) the January total of 86,281.

Last week's scheduled truck output of 21,057 was 3.40 percent below the previous week's 21,798 but 5.06 percent more than the year-ago week's 20,042.

Year-to-date, 207,783 trucks have been built, 8.98 percent more than the 190,666 completed last year at this time.

Car production for February totaled 84,028, 4.87 percent more than January's 80,125 but 8.59 percent below the year-ago month's 91,922.

Targeted output of 20,688 cars last week was 3.06 percent more than the prior week's 20,074 but 5.51 percent below the year-ago week's 21,895.

Chrysler Motors' plant in Bramalea, Ontario, and its Pillette Road plant in Windsor, Ontario, are idle until March 20 for inventory adjustment.

Big bucks, few bugs in CSI

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Customer satisfaction is more than a buzzword of the 1980s — it has become a multimillion-dollar business critical to automakers and dealers.

Each year, millions of questionnaires are mailed to new-car owners. They are aimed at winning for dealers and automakers a bigger share of the annual 200 million service visits, worth billions of dollars. Opportunities for the dealer are virtually unlimited because, as one consultant noted, there are 130 million cars on the roads — each needing service and, eventually, replacement.

Related stories, Pages 20-24

So it is no surprise that makers and dealers hire full-time staffs and consulting firms to develop and audit consumer satisfaction.

Customer satisfaction ratings have been around for only a decade. Over the years, the surveys have improved. But controversy lingers over the rating systems.

Throughout the industry, CSI rankings can determine who gets a new franchise. Some automakers use the ratings to decide who gets certain new vehicles. Mitsubishi, for one, pays some parts shipping charges for high-CSI dealers. Almost all the makers honor dealers with high CSI ratings.

Recently, Nissan started paying its dealers for high CSI ratings. Its Infiniti Division will provide to high-CSI dealers start-up aid packages that can reduce fixed costs up to 25 percent, according to James Hartzell, vice president — consumer affairs.

Dealers have other reasons to be concerned about CSI rankings.

They and consultants point out that CSI rankings vary by geography. Large-volume and multi-franchise dealers claim their im-

Hyundai leads again

Korean line retains sales-per-dealer title

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

Although its average slipped again in 1988, Hyundai Motor America for the third consecutive year topped all makes on the U.S. market in sales per dealership.

Dealers handling the South Korean line delivered an average of 1,053 new cars per outlet last year, far ahead of Honda division — whose 691 sales per outlet made it No. 2 in the car standings — and of Toyota Motor Sales U.S.A. — which came in No. 2 in the combined car-truck standings, with 850 sales per dealer.

Hyundai's total dipped from 1,369 in 1987 and 1,431 in 1986, its first year in the United States. Sales held steady in 1988, but Hyundai's dealer total increased, hence fewer deliveries per store.

Hyundai is the only make that has topped 1,000 sales per franchise in the 34 years Automotive News has been compiling such statistics.

Imports captured the first six places in the 1988 car standings and seven of the top 10 spots. Six of the seven imports were Japanese, and four of them were aided by sales of cars built at their U.S. plants.

The latter were Honda, Toyota, Nissan Motor Corp. in U.S.A. and Mazda Motor of America. Honda, Toyota and Nissan are veterans on the transplant scene. Mazda was selling U.S.-built cara for the first

Ford, Kia plan Tracker-fighter

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is planning to fill a hole in its truck lineup by introducing a small sport-utility that will be built by a North American contractor.

The strategy marks a change from an earlier, two-stage approach that would have seen the small vehicle produced first by Ford's Kia Motors affiliate in South Korea and later by a North American niche maker, according to industry sources.

The vehicle, code-named UW52, would serve as Ford's answer to Suzuki's Sidekick and the Geo-badged version, called Tracker. Tracker is sold in selected Chevrolet dealerships and represents an entry that Ford doesn't have. Ford is battling to keep Chevrolet at bay and hang on to the industry's truck sales crown.

Sources note, however, that Ford's plans are not cast in stone. There are questions about the potential size of the market and whether it can absorb another competitor. Chrysler Motors enters the field in 1992 with a sport-utility vehicle, code-named JJ. It expects to sell 100,000 units annually.

Annual production of the Ford vehicle is expected to be in the range of 40,000 to 70,000 units.

General Motors began importing the Tracker from Suzuki in the current model year.

Ford had planned on importing the UW52 in the 1991 model year and then sourcing it from a North American niche producer in the 1993 or 1994 range, sources said.

The automaker is now trying to speed up the process of getting the vehicle built domestically before that time, sources said.

Corporate fuel-economy standards were cited as one reason for the sourcing switch. By building it domestically, Ford will be able to qualify for fuel-economy credits that the vehicle would not have provided as an import.

The Big 3 automakers have been shying away from producing low-volume products on their own. In response, several supply and conversion specialists are preparing to build niche vehicles for the auto manufacturers. They believe they can build profitably at volumes that would fill only a fraction of the capacity at a typical Big 3 assembly plant.

So far, no contracts have been announced. The first builder of such niche vehicles will have to wrestle with the challenge of meeting its customer's demands for quality while coping with inevitable start-up problems.

The definitions of what constitutes a "niche" varies. Magna International, a Canadian supplier, has said it is thinking in terms of less than 30,000 units annually. C&C Inc. and ASC Inc., two Michigan-based conversion firms, believe they could handle as many as 50,000 units.

Ford owns 10 percent of Kia. The company supplies Ford with the subcompact Festiva, an entry-level car.

Kia's truck and bus subsidiary, Asia Motors, plans on building a new line of sports utilities for the Korean market later this year. Ford's UW52 will be derived from this program, sources said.

Asia Motors is investing 20 billion won ($29.4 million U.S.) to upgrade assembly facilities at its plant in Kwangju.

The investment came after the South Korean government relaxed restrictions that prevented automakers from competing in certain segments. Asia Motors has been producing Jeep-like vehicles for the Korean military.

A source in Korea said Modern Engineering, a Warren, Mich., prototype firm, has a contract for work on the UW52.

Staff Correspondent Oles Gadacz in Seoul, South Korea, contributed to this story.

Young promises more help for VW dealers

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — The new head of Volkswagen United States is promising to completely re-examine the way the company does business as he sets out to rebuild the struggling franchise.

William J. Young, who took over as vice president in charge of the VW sales operation Feb. 1, said the company will put special attention on programs that will help dealers directly at the retail level. That marks a break from the past; VW has focused its advertising on a na-

Redlining charge leveled in Subaru franchise case

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A Florida used-car dealer, who operated a Subaru dealership for only four days, is suing Subaru of America for denying him a franchise because the dealership was located in a predominantly black section of Miami.

Don Lloyd, owner of Don L. Motors, spent $684,000 to acquire a Subaru franchise from Warren Henry Subaru in Miami last October. He sold three cars before Subaru of America nixed the deal.

The lawsuit, filed in Dade County Circuit Court, accuses Subaru of breach of contract. But an even deeper issue looms — Lloyd's allegation that the company reneged on the deal because the dealership is in a 79-percent black area of Miami.

It cites the Equal Credit Opportunity Act, Civil Rights Act of 1866 and Robinson-Patman Act in its charges of discrimination and redlining.

Another issue raised in the suit is whether Subaru actually granted Don L. Subaru the franchise. If it did, was it in breach of contract by withdrawing from the deal four days after it gave him approval to buy the dealership from another dealer?

Lloyd had a letter of intent from Subaru saying that if Lloyd met a number of conditions by last Oct.

Autos big issue as EPA attacks global warming

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Large increases in automobile fuel economy, worldwide use of catalytic converters and emissions fees placed on oil and other fossil fuels are among the EPA's proposals to stabilize global warming. The proposals are contained in the draft of a report to Congress made public last week.

The report is in preliminary stages and has not yet been endorsed by the agency.

One option would require new U.S. cars to average 40 mpg by 2000.

The draft considers policy options to stabilize climatic results of the "greenhouse effect," a phenomena that is said to occur when carbon dioxide, methane, chlorofluorocarbons, nitrous oxide and other gases absorb and reflect heat radiating from the earth's surface. Human actions are now increasing the concentrations of "greenhouse" gases and are said to be intensifying the effect.

The EPA report proposes worldwide measures to stabilize global warming that results from the greenhouse effect, starting in 1990 with targets for changes in place by 2000.

It also recommends that new automobiles in industrial countries use three-way catalytic converters and meet 1989 U.S. emission standards. Cars in the rest of world would require oxidation catalysts. The report also proposes an emissions fee of 50 cents per barrel of oil and the phase out of chlorofluorocarbons — used in automotive air conditioners.

In a longer-term scenario, worldwide automobile fuel economy could reach 75 mpg by 2050, the report predicted.

A more radical policy option suggested by EPA would require new U.S. cars to average 50 mpg by 2000. That option would also levy an emissions fee of $3.25 on a barrel of oil.

EPA Administrator William K. Reilly called the report "the first by any government to take a comprehensive look at how nations might respond to global warming."

The report said no single country or source will contribute more than a fraction of the greenhouse gases that will warm the world and any solution will require the cooperation of many countries and cuts in many sources.

"Even the largest single source categories (for greenhouse gases), such as automobiles or utilities, however, represent less than 30 percent each of the total greenhouse gas emissions," the report said.

Policies to stabilize global warming outlined in the report could reduce the amount of calculated climatic change by at least 60 percent per century, the document claimed.

Isuzu may produce an Amigo-type sport-utility at Indiana plant

Isuzu keeps on truckin'

Japan, Indiana to emphasize niche vehicles

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Isuzu Motors, which already relies on light-truck-based vehicles for nearly 40 percent of its production, will offer more utility vehicles in the next few years, with some of those coming from its joint venture with Subaru in Indiana.

In an interview, Isuzu President Kazuo Tobiyama also said the automaker must shorten its product cycles and also share more models with Fuji Heavy Industries, maker of Subaru.

The building block for Isuzu's new niche vehicles will be the company's compact pickup truck. Some variations will be built at the company's U.S. joint venture in Indiana.

Amigo, Isuzu's first such niche product, is based on a shortened pickup chassis. The vehicle will be built in Japan and launched later this month.

Tobiyama said an Amigo-like vehicle also is slated for U.S. production at Subaru-Isuzu Automotive, the joint venture between Isuzu and Fuji Heavy Industries in Lafayette, Ind. When the plant starts up this fall, however, the pickup will be the only Isuzu model produced.

Tobiyama

Tobiyama said the emphasis at the plant and in Isuzu's product line will be on utility and recreational vehicles, an area the company intends to expand. The segment already accounts for 38 percent of Isuzu's sales.

Sources indicate that other variations include a closed-back version of the Amigo, perhaps a model similar to the Trooper II or something in the mold of a Jeep-like entry.

Tobiyama admitted Isuzu must speed up its production cycle and bring products to the market faster. "We cannot do just the same as others. We must do something different. In order to be ahead of others, modernizing the facilities is important," he said.

Tobiyama would like to see the production cycle for passenger cars reduced from four to three years, or possibly even two years. He also wants to shorten the cycle for commercial vehicles, which is currently about six to seven years.

Other Japanese makers are moving to speed up their car production cycles to less than three years. While the goal in passenger-car development is to "not fall behind" the competition, Toyiama said "in the field of commercial vehicles, we can say that we will be ahead of others."

Though Isuzu will introduce redesigned Piazza and Gemini models (known as Impulse and I-Mark, respectively, in the United States) this year, the company's emphasis appears to remain in the utility segment.

Isuzu wants to share vehicles from its Indiana joint venture, but so far there has been no agreement between the two companies. In Japan, however, Subaru sells Isuzu's Big Horn/Trooper sport-utility vehicle and Isuzu sells Subaru's van.

Tobiyama said the two companies are still talking about the possibility of an exchange in the United States, "but

Sales tricks inflate totals in Germany

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Manipulation of official new-car registrations in West Germany by manufacturers is squeezing dealer margins and may distort the European sales race.

Some industry observers maintain that West German new-car sales in 1988 were artificially inflated by so-called "tageszulassungen" (literally, one-day registrations) — cars registered and soon de-registered and sold as used cars at a discount.

Carmakers are looking for ways around a West German law that prohibits them from selling vehicles to dealers at prices lower than the manufacturer's posted invoice price. Since they can't offer rebates, they indulge in the registration ploy.

Several observers allege that the close-fought battle between Volkswagen and Fiat for sales leadership in Europe was influenced by manipulation of German sales statistics, although both companies strongly deny any finagling. A new set of statistics on short-term registrations showed Fiat as the biggest user, while VW had relatively few such registrations.

Last year, VW came from behind to win the European sales crown over Fiat by only a few thousand units, according to most estimates.

Some retailers have advertised registered cars openly. A Fiat dealer in Munich recently offered a Panda, with a list price of 10,190 marks ($5,478), for 9,200 marks ($4,946) with the line: "Registered for a day, zero kilometers."

Another dealer come-on was: "We've registered it for you."

Tageszulassungen "is a real problem for dealers," said Helmut Bluemer of the Zentralverband Des Kraftfahrzeuggewerbes (ZDK) in Bonn, the German dealer association. "The dealers are trying to stop it, but the companies have a great interest because they want to push up their official registrations."

His group estimates that as many as a quarter million vehicles, nearly 10 percent of West Germany's 2.8 million-car market last year, were short-time registrations.

Technically, the practice is illegal since German registration law requires an intent to put the vehicle on the road and establish a base location. But "the dealers say no one ever bothers to look at it," said one high-ranking West German sales executive.

Officially, manufacturers say short-term registrations are being done independently by dealers. Unofficially, carmakers accuse each other.

Dealer and automaker sources in Germany say dealers are encouraged by manufacturer programs —

NHTSA nominee Curry no stranger to safety

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A retired U.S. Army major general who directed a Maryland proving ground where the government tests new vehicles and weapons was named NHTSA administrator late last week.

Jerry R. Curry, 56, was selected as the choice for the job two weeks ago by Transportation Secretary Samuel K. Skinner who forwarded the nomination to the White House for final approval.

Curry replaces Diane Steed, who served as NHTSA administrator for the past five years in the Reagan administration. Steed, who has served as administrator since November 1983, received her 30-day notice last week. Steed had made it known she wanted to stay in the position. Steed's plans are unknown. NHTSA said the former administrator had no comment on where she may seek future employment and did not wish to comment.

Curry, a Virginia Beach, Va., resident, directed the U.S. Army Test and Evaluation Command in Aberdeen, Md., the nation's largest proving ground where "we put the 'Good Housekeeping' seal of approval on all sorts of products after the most extensive testing in the nation," Curry said in a telephone interview.

Curry directed the engineering, development and testing on equipment ranging from missiles, computers, rifles, airplanes and naturally cars and trucks.

The testing of cars and trucks, ranging from Army jeeps and "little cars" to large-sized Ford trucks, was more intense than the programs that evaluate civilian consumer products, Curry said.

"We had to make sure they would run in the desert, mud and water — we ran them very extensively," Curry said.

The background has admittedly made Curry a self-confessed safety advocate, although he acknowledges that his expertise is not on the technical side.

"I am not an expert (on technical matters) in that I've been working with policy. I am primarily a policy maker and a leader; I've been in charge of things," Curry said.

Curry declined to say whether he believed NHTSA needs to tighten safety regulations.

The retired major general was also a pilot, flying as an Army aviator for 30 years. After retiring from the Army in 1984, Curry became an adviser in 1985 to television evangelist Pat Robertson's Freedom Council. Curry quit six months later. "I got out of there before they got into the political business," he said.

Curry said he assisted Robertson "because he was having problems administering and he asked me if I would help him straighten them out."

After consulting for Robertson, Curry became president of a Norfolk, Va.-based public policy think-tank, the National Perspectives Institute, specializing in international trade. The group is now defunct.

He also ran an unsuccessful bid last fall for the U.S. House of Representatives but was defeated by an incumbent Virginia Democrat. Curry also worked on the Bush presidential campaign.

He was nominated for the NHTSA post after his name was put into the hopper by a senator who recommended Curry for the new cabinet level post of secretary of Veteran Affairs. Curry said he told the White House personnel office, "I would go wherever the president wanted me and where Bush assigned me; I would serve at his pleasure."

Curry served active duty in the Army for 34 years, entering as a private and working his way up to major general. While in the Army, Curry obtained three college degrees including a master's degree in international relations from Boston University and a doctorate of ministry from Rice Seminary in Jacksonville, Fla.

Chicago firm buys Calif. dealerships, plans U.S. chain

By Janet Neiman
CRAIN NEWS SERVICE

CHICAGO — A newly formed Chicago-based company has launched an ambitious plan to create a national network of auto dealerships.

J.W. Newco Ltd., whose president and chief executive officer is former insurance executive Joe Wilson, last month completed the $21 million purchase of Claremont Auto Park, Claremont, Calif. Now the focus is on a group of Chicago-area dealerships.

Newco's strategy is to purchase "clusters" of auto dealerships around the country and create a chain of so-called auto parks — multiple dealerships situated on one, large parcel of property.

Last month, Wilson took his first step toward that goal. Backed by GE Capital's Auto Financial Services group, he acquired the Claremont Auto Park. The auto park spans 17 acres and boasts eight franchises, ranging from Cadillac to Hyundai.

Wilson is the former president and chairman of the executive committee of Chicago-based Ryan Insurance Group. Though he did not disclose the names of the Chicago-area dealerships he may acquire, he said he plans to initiate a deal by the end of the year.

Wilson believes that grouping the dealerships in a park-like setting allows significant economies of scale in management and marketing. The setting also provides convenient one-stop shopping for car hunters.

In addition to appointing a single general manager to oversee all of the dealerships in each market, the auto parks will have centralized facilities, such as service, body shops and used-car departments. Advertising also will promote all the Newco auto parks in a given market.

"The idea is to create a family of dealerships within these metropolitan areas so you have a common theme, a common message, a common marketing perception," Wilson said. He envisions standardized sales and service procedures — "everything from dress codes to the way a customer is treated to the way a car is delivered."

Wilson concedes that Newco's future acquisitions are unlikely to be as simple to obtain as the Claremont purchase, where the dealerships already were located in the auto park and owned by only two parties. In other markets, including Chicago, Newco probably will have to purchase adjacent dealerships from various owners and create the park environment.

Newco also may buy dealerships from an owner who has a few in one area of the city and a couple in another. "You'd buy them all and still create clusters," though advertising would direct customers to the auto park closest to them, he said.

Wilson listed three criteria for acquisitions: they must be on a major thoroughfare; they must have reasonable but potentially higher sales volume; and they must be underperforming in terms of profits.

If a Chicago deal comes to fruition, Newco's entrance into the retail market is likely to rev up interest here for additional auto parks and malls. The design concept has not caught on in the Midwest as in other parts of the country.

Multi-franchise and "megadealership" groups already abound in the Chicago metropolitan area, which lists about 700 auto dealers, many with multiple franchises. But most of those chains are not as extensive as the clusters Newco envisions and they don't provide the same one-stop shopping.

One significant exception is Motor Werks in Barrington, Ill., which in 1987 added Cadillac, Porsche, Sterling and Suzuki franchises to its BMW and Mercedes-Benz line. The dealership created a mall-like setting that is considered a model for the industry.

"Traditionally, manufacturers demanded separate facilities," said Eric DeBord, operations manager at Motor Werks. "But real estate costs and expenses for single-site locations have become very costly. Dealers need to take advantage of economies of scale."

Just how the development of auto parks might affect existing auto retailers in Chicago is debatable.

"I think they'll affect individual dealers," said Neil Friedman, senior audit partner at Michael Silver & Co., a Skokie, Ill., accounting firm that handles auto dealerships.

"The auto parks will provide one-stop shopping for customers interested in different makes of cars, and the convenience of that will work to the detriment of dealers that have only one or two franchises."

But dealers aren't necessarily worried about competition from auto parks.

"It wouldn't do anything to us," said Frank DeBartolo, general manager of Celozzi-Ettleson, Elmhurst, Ill., one of the Chicago area's top-selling dealers. "There are already plenty of places with five or six dealerships a few feet from each other.

"We're isolated out here (in Elmhurst). We're not even on a major road, and we do all right."

DOMESTIC SALES

U.S. Car Total	172,514	211,772

Domestic sales plunge 18% for early March

By Karen Detkowski
SPECIAL CORRESPONDENT

Sales of U.S.-built cars declined 18.54 percent in the first 10 days of March. The total was 172,514 vs. 211,772 in 1988.

Each of the Big 3 was down for the period, but three of the five transplants reported increases.

Chrysler Motors delivered 35.86 percent fewer cars than it did a year ago, although Eagle sales rose 55.42 percent.

Ford Motor Co. sales dropped 21.42 percent. All three of its makes declined.

General Motors sales slipped 13.42 percent. Cadillac was up 2.08 percent, but the other divisions were down.

In the first 10 days of March, Mazda delivered 54.82 percent more U.S.-built MX-6 models than last year.

Toyota sold 1,177 U.S.-built Camrys and 673 U.S.-built Corollas. The total of 1,850 was up 66.67 percent over last year's 1,110 when only Corolla was assembled in the United States.

Honda's transplant sales rose 3.17 percent over the year-ago period, and Nissan's sales were down 13.36 percent. Mitsubishi sold 436 Eclipse models. The U.S.-built Eclipse went on sale in January.

February sales tumble

Dips for lights, mediums cut total 11%

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic truck sales declined 10.99 percent in February because of a slide in most light- and medium-duty segments. Only Class 4 medium and Class 8 heavy trucks posted gains over last year.

February sales of 378,420 trucks in the United States were off from 425,149 in 1988.

The Class 1-3 light-duty segment's 355,189 total was down 11.04 percent from 399,278 in the year-earlier period.

In the medium category, Class 4, under the impetus of Ford's Super Duty models, more than doubled its year-earlier performance with 2,472 sales, up from 1,028 in February 1988. Elsewhere, Class 5 sales of 505 were down from 556 a year earlier; Class 6 sales of 3,232 were down from 5,728; and Class 7 sales of 6,217 were off from 8,141 a year ago.

Class 8, with its strong order backlog, continued its gain over last year. Sales of 10,805 heavy-duty models were up from 10,418 in February 1988.

For the first two months of calendar 1989, manufacturers retailed 744,631 trucks, off 5.41 percent from 787,233 a year earlier.

Light-duty sales of 696,032 were off 5.91 percent from 739,773 in 1988.

In the medium segment, Class 4 sales of 4,991 tripled last year's 1,655. Class 5, with 1,462 sales, retained a lead over 1,090 a year earlier. Class 6 sales of 6,561 were down sharply from 10,232 in 1988, as were Class 7 sales, which dropped to 13,708 from 14,651.

Class 8, with sales of 21,877 trucks, was up sharply from 19,832 a year earlier.

All Class 8 competitors were up for the first two months of 1989.

Segment leader Navistar's sales of 5,217 were up a modest 2.37 percent from 5,096 a year earlier.

No. 2 Freightliner's sales of 3,866 were up marginally from 3,819 last year.

Kenworth took third-place with 2,669 sales, up a sharp 26.91 percent from 2,103 a year ago.

Fourth-place went to Peterbilt, with its sales of 2,612 Class 8s, up 26.42 percent from last year's 2,066.

Fifth-place Mack had a considerably larger 15.58 percent increase for the first two months, based on 2,582 Class 8 sales compared to 2,234 in 1988.

Sixth-place Volvo GM had an even greater 39.34 percent gain on sales of 2,458 Class 8's compared to 1,764 last year.

And seventh-place Ford's Class 8 sales of 2,133 units were up 16.56 percent over 1,830 a year ago.

Freightliner expansion makes a heavy-duty trend

PORTLAND, Ore. — Freightliner Corp. joined the list of heavy-truck manufacturers planning production expansions.

Volvo GM Heavy Truck and Kenworth are also planning to expand capacity. Volvo GM recently acquired a plant and expects to have it running at full capacity late this year. Kenworth is selecting the site for its new facility.

Freightliner purchased a plant in Cleveland, N.C., from MAN Truck & Bus Corp. The property consists of about 100 acres. The plant and offices total about 280,000 square feet.

The industry's expansion plans are in direct contrast to a few years ago when several major manufacturers, including Paccar, parent of Kenworth and Peterbilt, eliminated capacity.

Freightliner was capacity-constrained in 1988.

Even though it produced at full capacity and exceeded its 1987 sales levels, it lost market share last year due to the rising market, said Ernst G. Stoeckl, president and chief executive officer.

Freightliner will shift part of the production at its nearby Mt. Holly, N.C., truck plant to Cleveland, thereby allowing Mt. Holly to build more of the Long Conventional model. The Cleveland plant will be in operation in late 1989. The new plant will increase Freightliner's U.S. capacity by about 10 percent by year-end, Stoeckl said.

Freightliner's current order backlog, like those of its competitors, is very strong, so it plans to get its new plant to full speed quickly.

The company's other manufacturing plants are in Portland, Ore.; Burnaby, British Columbia; and an assembly plant for Mercedes-Benz in Hampton, Va.

New Alaska rep for Detroit Diesel

DETROIT — Detroit Diesel Corp. said McDonald Industries of Seattle has signed a letter of intent to buy the rights to distribute Detroit Diesel engines and Allison transmissions in Alaska from Emerson GM Diesel, the current distributor.

D.M. Emerson, president and principal owner, is retiring and selling the assets of Emerson GM Diesel, according to Detroit Diesel.

Emerson also holds the rights to distribute Detroit Diesel products in western Washington. A Detroit Diesel spokeswoman said the corporation is reviewing the possibility of combining the western Washington distributorship with one or more of the neighboring distributors.

McDonald Industries is not currently among Detroit Diesel's 44 North American distributors. The new Alaska distributorship will be called Alaska Detroit Diesel and will be headquartered in Anchorage at the current Emerson GM Diesel facility.

The Detroit Diesel spokeswoman said the corporation's distributors are all independent and it has no plans to purchase any of them.

PICK-A-PAIR: *Limited-edition Coupe DeVille, Eldorado blossom for spring*

DETROIT — Cadillac has introduced a pair of limited-edition spring models — the Spring Edition Coupe DeVille and the Eldorado Spring Special.

They are equipped with option packages that include convenience, luxury and styling items. Both have aluminum alloy wheels, leather seats and front passenger seats with six-way power adjustments and manual seat recliners.

Other features include illuminated driver and passenger vanity mirrors, illuminated entry system and leather-trimmed steering wheel.

The models are available in four colors — carmine red, sapphire blue firemist, sable black and cotillion white.

The Spring Edition Coupe DeVille has a monochromatic color scheme with matching interior and full cabriolet roof treatment. The Eldorado model may be ordered with contrasting cabriolet roof and interior.

Both models will be produced in limited quantities; they became available March 1.

The special DeVille is priced at $27,955 — the DeVille base price of $24,960 plus the option package price of $2,995. The Eldorado is $28,073 — the Eldorado's $26,738 base price plus $1,335 for the option package.

Southeast Toyota, Nuckolls build in Orlando; 2 more due

Southeast Toyota Distributors and Bill Nuckolls, a longtime Florida vehicle wholesaler, are building a $6 million auto auction in Orlando, Fla., and plan to build two more, in Fort Lauderdale, Fla., and Atlanta.

Nuckolls opened Orange County Auto Auction in Orlando on eight acres in 1984. He said unexpected growth has led to rebuilding the auction on 71 acres near the existing facility.

Southeast Toyota has a 50 percent stake in the Orange County Auto Auction, according to Nuckolls.

He said Southeast Toyota also will have a 50 percent interest in the other two auctions to be built in the next 24 months. Southeast Toyota is Toyota Motor Sales' distributor in Florida, Georgia, Alabama, North Carolina and South Carolina.

Officials at Southeast Toyota confirmed the company has a stake in Orange County Auto Auction but declined to comment on the venture.

Nuckolls said the Orange County Auto Auction was a family business before Southeast Toyota bought out other members of the family.

He said the new facility is expected to open in June, complete with a detailing facility and car wash.

"We are registering 1,000 cars every week and selling between 575 and 625," he said. "Our operation grew way beyond our expectations. The present facility is too small."

The new auction is located 10 minutes from the current site. It will have seven lanes, up from four, and will be able to process 2,000 vehicles a week.

Nuckolls said plans call for reopening the old site as a vehicle salvage auction — selling vehicles destroyed in collisions for insurance companies.

Brasher's adds warranty

Sellers are responsible for repairs in excess of $100 on qualified vehicles sold at Brasher's Sacramento Auto Auction in Sacramento, Calif., if mechanical defects normally covered by arbitration are discovered within four days or 500 miles.

The auction said its "Sacramento 500" plan carries no fee for the seller, who must guarantee the vehicle is free from any hidden or known defects.

Under a second program, a covered vehicle is warranted under the Brasher's Auction Warranty rather than by the seller to be free of major mechanical defects. Sellers pay a $25 fee for an auction inspection and provide the auction with a guarantee the vehicle is sound.

The buyer can then pay $25 to extend the warranty beyond the day of sale. If a covered defect should arise within four days or 500 miles, the auction will repair the vehicle and bill the buyer only for the first $100 in repairs.

Buyers of vehicles not pre-qualified for Brasher's Auction Warranty can have them inspected by auction mechanics and be covered by the plan for a $50 fee.

"This program is the only one of its kind in the auction industry," said Rex Roden, general manager of Brasher's Sacramento Auto Auction. "Our dealers have been very enthusiastic about it, and we expect to see more like it in the industry."

All domestic and most imported vehicles are eligible for the warranties covering defects in engine, transmission, rear-end, emissions-control equipment and air conditioning.

Brasher's also has introduced a program that allows qualified auction customers up to 28 days to pay for vehicles purchased.

Auto buyers normally have to pay for a vehicle the day of the sale or upon receipt of the title. Under the four-week draft program, the auction will hold a customer's draft for 28 days before sending it to the bank for payment.

Auction customers pay a fee to participate in the four-week program. The fee is based on the amount of money involved in the extended draft.

Louisville adds lanes

Frankenthal Group will spend $150,000 to add two sales lanes and a larger dealer lounge to the Louisville Auto Auction in Clarksville, Ind.

Construction of the 6,000 square-foot addition is scheduled to be completed this spring. In addition, the company has purchased four auto transport vehicles, bringing its total to eight.

Frankenthal Group also owns Cincinnati Auto Auction in Hamilton, Ohio, and SJF Transport in Clarksville, Ind.

European Mustangs pony up

The American Pony Drive, a traveling collection of 40 vintage European-owned Ford Mustangs, made a publicity stop in Detroit last week. Organizers John Manners, right, and Madeline Koch have planned a 17-state tour that begins Friday. The tour is in conjunction with the 25th anniversary of the Mustang.

Makers fine-tune incentives

Chrysler, Chevrolet, Olds change customer programs

By Laura Clark and Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — In the latest chorus of incentive-tuning, Chrysler Motors sweetened offerings on LeBaron and Daytona and mailed rebate offers on other vehicles, Chevrolet added regional incentives to its national ones and Oldsmobile changed the expiration date of its program.

Chevrolet is offering regional consumer incentives on several car models until May 2.

In its 14-state "Momentum '89 Camaro Regional Incentive" program, Chevrolet is giving a $500 rebate on a Camaro. If dealers contribute $250, Chevrolet increases the rebate to $750, for a total savings to the consumer of $1,000.

The Camaro rebate program is effective in California, Florida, Texas, Wisconsin, Illinois, Indiana, Ohio, Michigan, Kentucky, Tennessee, North Carolina, South Carolina, Georgia and Alabama. The program began March 7 and ends May 2. It applies to vehicles purchased or leased from dealer inventory.

In the Eastern states and Texas, Chevrolet is offering free automatic transmission on 1988 and 1989 Cavaliers. The dealer's cost on the automatic transmission usually is $340. Under the program, dealers must contribute $150 of the cost of the automatic transmission.

The program runs until May 2. It is good in Massachusetts, Maine, Connecticut, New York, New Hampshire, Vermont, Rhode Island, New Jersey, Delaware, Maryland, Pennsylvania, Virginia, Texas and the District of Columbia.

Buyers of 1989 Corsica and Berettas in selected states can receive a $400 rebate, of which the dealer contributes $200 and Chevrolet $200. Chevrolet declined to name the states in which this incentive is offered. The $400 rebate is in addition to the national $600 rebate on Corsica and Beretta. The regional incentive ends May 2.

CHRYSLER MOTORS: Chrysler announced that its "Here's to You, America" incentive program will now offer $1,000 on 1988 and 1989 Chrysler LeBaron coupes (excluding convertibles) and 1988 and 1989 Dodge Daytonas. Previous incentives on those models were $750. As an alternative, consumers may select low-interest loans ranging from 4.9 percent to 10.9 percent.

In addition, Chrysler launched a direct-mail program aimed at current owners of its vehicles. It offers $300 to $500 in addition to Chrysler's other incentives and runs March 15 to May 31.

Bonus certificates were mailed to 1.6 million owners March 17-22. Dealers will receive a prospect list of owners this week.

The "Special Thanks" program gives certificate holders rebates of $300 on 1988 and 1989 Plymouth Colt, Horizon, Sundance and Acclaim; 1988 and 1989 Dodge Colt, Omni, Shadow, Spirit; 1989 Eagle Summit; and 1988 and 1989 Plymouth Voyager and Dodge Caravan with the shorter wheelbase.

The rebate is $500 on the 1988 and 1989 Dodge Daytona and Dynasty; 1988 and 1989 Chrysler LeBaron coupe and convertible, New Yorker and New Yorker Landau; and 1988 and 1989 Eagle Medallion and Premier.

OLDSMOBILE: Oldsmobile announced that the ending date for its incentive program is April 3 instead of the previously announced March 31. A company press release had erroneously reported that the program ended March 31.

Cleveland-FTC agreement on hours takes effect

WASHINGTON — Within the next 30 days, the Cleveland Auto Dealers Association will place advertisements in the Cleveland Plain Dealer explaining its agreement with the Federal Trade Commission requiring its 130 members not to limit showroom hours.

The 10-year consent decree was reached late last year and now has become final. The dealer group does not admit violating any law, but agrees to change its bylaws and policies and to report periodically to the FTC.

Cleveland was the only major U.S. city besides Detroit that had restricted showroom hours. Cleveland agreed to settlement before trial. The position of the Detroit Auto Dealers Association was upheld in a similar case before an administrative law judge, but that victory was overturned recently by the commission. The Detroit dealer group said it will appeal the decision.

Investor throws $2 million in pot to help bail out bankrupt Zimmer

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A private investor has committed $2 million to help Zimmer Corp. of Pompano Beach, Fla., work its way out of Chapter 11 bankruptcy.

The specialty vehicle conversion firm will use the funds to pay unsecured claims arising from its 1988 bankruptcy.

Zimmer President Terry McMahan said the investor asked that his name not be disclosed.

It has not been decided whether the investor will have a management role in the restructured company, according to Jack Gary of Crown Financial Associates of Palm Beach, Fla., who arranged the funding.

The private placement loan is subject to approval by the U.S. Bankruptcy Court for southern Florida.

Zimmer and its creditors intend to file a joint plan of reorganization by March 23. Company management hopes to emerge from bankruptcy by this fall and resume its business of converting vans and upfitting sport-utility vehicles.

Last October, the company arranged a $4 million line of credit and $1 million in working capital from bankers. Gary said the new investor was attracted to Zimmer after reading of that arrangement. A company spokesman said that line of credit is still in place.

Two Zimmer subsidiaries — Zimmer Motor Cars Corp. and Zimmer Motor Coach Corp. — have filed liquidation plans that have been approved by creditors and the bankruptcy court. Also, the Zimmer Recreational Products Corp. subsidiary has sold all its assets to a group of Kansas investors.

SALES

FROM PAGE 3

time in 1988.

Honda's Acura division and Mitsubishi Motor Sales of America made the top 10 without transplants, although Mitsubishi began selling U.S.-built cars in January 1989.

Ford Division, Chevrolet and Pontiac were the U.S. cars in the top 10.

Four of the top 10 increased their car sales per dealer in 1988 — Toyota, Ford, Mazda and Pontiac.

Showing declines in addition to Hyundai were Honda, Acura, Nissam, Mitsubishi and Chevrolet.

Mitsubishi, third in the combined car-truck standings in 1987, slipped to sixth in 1988. Car-truck sales were off only 5 percent in 1988, but Mitsubishi's dealer total jumped to 250 from 148 a year earlier, and all Mitsubishi dealers now handle trucks as well as cars.

That combination of factors cut sales per outlet to 571 from 831 in 1987. The truck sales boom of recent years has dispelled the notion that trucks are small potatoes in the dealership world. A few examples from the sales-per-dealer averages show just how important they really are.

Dodge dealers averaged more truck sales than car sales last year — 186 vs. 168 — and truck figures for Ford and Chevrolet nearly matched their car numbers. Ford dealers averaged 349 cars and 320 trucks. Chevrolet dealers averaged 298 cars and 272 trucks.

Perhaps Suzuki of America Motor Corp. is the best example. It was 11th in combined car-truck sales per dealer in 1988 with 322 deliveries. All but one were sport-utility vehicles, which are counted as trucks on the sales charts. Suzuki began selling cars in the United States late in 1988.

Of the 38 makes in the car-truck ranking for both 1987 and 1988, 15 increased their sales-per-outlet averages last year. Among the domestics, 13 of the 14 makes were up. The Chrysler brand showed the only decline. Mazda and Range Rover were the only gainers among the imports.

At the corporate level, each of the Big 3 boosted their car-truck sales-per-dealer averages in 1988. Ford Motor Co. rose to 691 sales per outlet from 635 in 1987. General Motors advanced to 554 from 514, and Chrysler Motors climbed to 415 from 383.

Only two of the foreign-based manufacturers have more than a single line of vehicles and, therefore, more than a single dealership network, in the United States. Neither sells trucks. American Honda (Honda and Acura) averaged 652 sales per dealership last year, compared to 676 in 1987. Volkswagen of America (VW and Audi) fell to 181 last year from 215 in 1987.

CAR-TRUCK SALES PER OUTLET

Final 1988	1988	1987
1. Hyundai	1,053	1,369
2. Toyota	850	857
3. Honda	691	693
4. Ford	669	612
5. Chevrolet	570	541

Truck output tops million, leads 1988

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. truckmakers built their millionth vehicle of the year last Friday, one week ahead of 1988.

So far this year, 1,008,709 trucks have been assembled, 8.86 percent more than the 926,594 completed last year at this point.

Last week's scheduled truck production of 94,903 units rose 3.61 percent over the prior week's 91,596 and was 12.15 percent above the year-ago week's 84,619.

Auto production was targeted at 151,409 units last week, 1.17 percent higher than the previous week's 149,658 and 4.49 percent more than last year's 144,909.

Year-to-date, 1,644,690 cars have been produced, 16.92 percent more than the 1,406,731 assembled at this time last year.

Last week's scheduled production was shared as follows: General Motors, 45.49 percent; Ford Motor Co., 26.66 percent; Chrysler Motors, 13.34 percent; Honda of America Manufacturing, 5.12 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.20 percent; New United Motor Manufacturing Inc., 2.64 percent; Nissan Motor Manufacturing Co. U.S.A., 1.55 percent; Toyota Motor Manufacturing U.S.A., 1.34 percent; and Diamond-Star Motors, 0.66 percent.

Chrysler called back 1,200 workers to the Jefferson Avenue plant in Detroit and began building Plymouth Horizon and Dodge Omni models last week. The plant had been shut down since December for conversion. Horizon and Omni were moved from the Kenosha, Wis., plant that closed last Dec. 23.

GM slated overtime last Saturday at its Oklahoma City; Arlington, Texas; Lakewood, Ga.; Lordstown, Ohio; and Lansing, Mich., car plants. Also scheduled to work last Saturday were the Flint, Mich.; Pontiac (West), Mich.; Shreveport, La.; and Lordstown, Ohio, truck plants.

Overtime was scheduled last Saturday at Ford's Lorain, Ohio, and Wixom, Mich., car plants and its Wayne, Mich.; Louisville, Ky.; and St. Louis truck plants.

Diamond-Star Motors announced it will advance the startup of its second shift by six months. The second shift will start in May; it was originally scheduled for November. Current employment is 1,900 and will increase to 2,900 by July.

Car production firm in Canada

Canadian auto output was scheduled at 19,456 units last week, down slightly from the prior week's 19,559 but 3.03 percent above the year-ago week's 18,884.

Truckmakers estimated assembly of 18,707 units last week, 10.91 percent below the previous week's 20,997 and 6.80 percent below the year-ago week's 20,071.

Chrysler's Pillette Road plant in Windsor, Ontario, and its plant in Bramalea, Ontario, resumed output today. Both had been closed for inventory adjustment, Pillette for one week and Bramalea for two.

Dealers an import priority

Leaders want 'em strong, profitable

Stronger, more profitable dealerships — not necessarily more dealerships — is the goal of auto importers as they prepare for the 1990s.

That is the message of executives interviewed for Import World, a special section in this issue.

Import World section follows Page 52

The import officials — representing Japanese, Korean, German, Swedish and British vehicle nameplates — stressed that making existing dealerships more profitable, by boosting sales per outlet, is high among their goals as they prepare for the 1990s.

Any expansion in number of dealerships, they said, will be precisely planned and carried out.

Said Erich Krampe, president, Mercedes-Benz of North America: "The health of our dealer body is very much our top concern. We have no intentions to extend our dealer organization dramatically. Also, we have no intentions to shrink. We are well represented now. We are not going the expansion road, and we are not going the contraction road."

Added Krampe, whose company recently has undergone a reorganization: "We are going to concentrate on supporting the dealership in total. The dealer body, and thereby the retail customer, will see a very strong and responsive management out there (in the sales zones), with more authority and more responsibilities."

During the past year, Mazda Motor of America consolidated two regional marketing arms into a single company and added about 35 dealers.

With that accomplished, George McCabe, deputy general manager and group vice president — sales and marketing, said Mazda has undertaken two major projects: identifying markets that are ripe for expansion and turning existing Mazda franchises into exclusive points with upgraded facilities.

"Next year, we'll add more dealerships — not many, but in key metro markets where studies show we're underdeveloped to some degree," McCabe said. "Our philosophy has been, and always will be, to add dealers only as we need them. We would rather do the volume of business we have with the least number of dealers."

McCabe added: "Our dealer development plans are not what I would call aggressively expansive. Actually, they're rather conservative."

Similarly, Hyundai Motor America's dealer expansion plans are based on production volume, ac-

4Runner goes 4door
Toyota introduced its 1990 4Runner sport-utility vehicle at the New York auto show. In addition to having a four-door sport-utility for the first time, Toyota will also offer the new model in a two-wheel-drive version. Two-door models will continue to be four-wheel-drive only. **New York auto show story and other photos on Page 4.**

Yugo, liquidator in accord

Buyback plan averts distress sale of 4,700 cars

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEWARK, N.J. — Yugo America has settled its dispute with an inventory liquidation firm that threatened to ruin the market for Yugos by dumping thousands of cars below dealer cost.

The out-of-court settlement, which was reached last Thursday between Yugo and Norauto LP of Columbus, Ohio, is subject to approval by Chief Judge Vincent J. Commisa of U.S. Bankruptcy Court.

It provides that Yugo America will be allowed to purchase about 4,700 Yugos from Norauto for resale to dealers. The settlement would also remove some of the uncertainty hanging over the company and its dealers since Yugo's parent, Global Motors, filed for reorganization Jan. 30 under Chapter 11 of the Bankruptcy Act.

Yugo America, the U.S. distributor of the Yugo, is based in Upper Saddle River, N.J.

Late last year, Norauto financed two shipments of Yugos with letters of credit worth about $14.3 million, using the cars as collateral. Norauto took delivery of the shipments Oct. 4 and Dec. 12.

Norauto, which deals in "distressed" inventory obtained from bankrupt or terminated dealers and distributors, subsequently claimed Yugo America defaulted on its promise to repay the financing with interest and threatened to sell the cars below dealer cost.

After that threat, Global filed for bankruptcy.

Under the proposed settlement, Yugo America agreed to buy a minimum of 150 cars in April, 200 in May and 300 from June through August.

The repurchase price is based on the original invoice price plus $275 per car, plus interest charges of prime plus 1 percentage point. The invoice prices of the cars range from about $2,200 to $3,000 depending upon model year and equipment.

By comparison, Yugo received the invoice price of the cars from Norauto in the form of the letter of credit. But the importer also had to pay on a per-car basis, $275 interest, $210 freight and $60 customs duties, Marcel

Ecology, car demand set to clash

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Heightened concern in Washington over global warming has prompted a flurry of tough fuel-economy bills in Congress and threatens to set government policy on a collision course with market demand for larger, more powerful cars.

While data is not conclusive on what impact the "greenhouse effect" is having on the environment, the speed with which Congress implements laws may depend less on their scientific merits than on this summer's weather.

"If we have another very hot, dry summer and the TV, newspapers and magazines start screaming, 'The greenhouse effect is here, somebody do something,' well, the 'somebody' will be Congress and they will increase CAFE," predicted Chrysler Motors President Robert Lutz.

At least five bills have already been introduced to Congress that would mandate corporate average fuel economy standards in the range of 40 to 50 mpg by the year 2000 in the interest of stabilizing the earth's temperature.

EPA recently issued a preliminary report recommending similar CAFE levels to combat greenhouse gases, primarily carbon dioxide, created when fuel is burned.

The EPA recommendations indicate the Bush administration supports such legislation — a complete reversal of the Reagan position.

Most of the bills in Congress call for at least a 20 percent increase in the CAFE standard of 27.5 mpg by 1992 or 1993. (Although the standard originally called for a CAFE of 27.5 mpg for 1989, it was rolled back by NHTSA to 26.5 mpg last fall.)

Lutz said Friday at the New York auto show that he hopes Congress won't raise CAFE beyond 30 mpg. "That's tough enough, depending on the time frame," he said.

If legislation calling for tight fuel-economy standards by 2000 becomes law, manufacturers will have relatively little time to change their design plans.

Rental-car industry: a tumultuous giant

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Ownership changes in the rental-car industry have occurred at such a rapid clip in the past three years that observers need a scorecard to keep track of the players.

And big players they are: The industry last year purchased about 10 percent of total U.S. car production, representing more than $9.2 billion in revenue to domestic automakers.

It has become such an important part of domestic automakers' sales that to guarantee their market shares, General Motors has taken a stake in both Avis and National Car Rental Systems Corp., and Ford Motor Co. has taken equity positions in both Hertz Corp. and Budget Rent a Car Corp.

The partnership between Ford Motor and Hertz is an example of the synergy between an automaker and a rental-car company.

Ford sold about 85,000 vehicles, representing $850 million in revenue, to Hertz in 1987, according to Charles H. Finnie, analyst with Maryland-based Alex. Brown & Sons. Although hard numbers for 1988 are not yet available, he said he expected the total to exceed 100,000 units.

Driving the recent ownership changes at the rental companies was the repeal of the federal investment tax credit in 1986. The repeal meant the conglomerates that owned the rental-car companies no longer received huge tax benefits for buying cars.

As a result, the industry's Big 4 — Hertz, Avis, Budget and National — have undergone a flurry of management buyouts, public stock offerings and, in one case, purchase by its employees.

In the case of Hertz, Ford contributed $500 million in equity and joined with Hertz management to form an investment group that acquired the No. 1 rental-car firm in 1987 from UAL Corp., now United Airlines, based in Chicago.

Last summer, Ford turned around and sold 20 percent of Hertz to AB Volvo for $100 million, thereby reducing its ownership to 60 percent. Hertz management retained a 20 percent stake.

Avis employees, using an employee stock ownership plan, purchased Avis from New York investment firm Wesray Capital Corp. in 1987 for $750 million and assumption of the company's debt of $1 billion. It was the fifth time in as many years the company had changed hands.

In January, GM purchased an undisclosed portion of Avis — estimated at 25 percent by industry sources.

Neither has Budget been exempt from ownership turnover. Budget expects to wrap up a deal in April in which a holding company comprised of Ford, Budget management and the New York-based investment firm Gibbons, Green, Van Amerongen will buy shares of the company held by outsiders,

Futurist planted in present

Cutler guides Chrysler vision

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Laurel Cutler: Chrysler's futurist/marketing guru

SANTA FABIO

How will Chrysler Motors differentiate Dodge cars from Plymouths? What is the best way to get shoppers into Eagle showrooms? What will consumers think about four-wheel-drive vehicles in 1995?

For the answers to these questions, Chrysler Motors turns to Laurel Cutler, a sharp-witted marketing expert and renowned futurist who joined the company as vice president of consumer affairs in November.

As the company's leading expert on consumer trends, Cutler, 62, keeps Chrysler management abreast of how consumers feel about the automaker and its cars.

Whether it is the styling of future vehicles or development of hard-hitting advertising, Cutler is bringing the voice of the consumer to Chrysler's planning. Her charter includes helping Chrysler executives reassess marketing strategies.

"I honestly feel that my value to this corporation is that I am the most 'other' individual that they can imagine," said Cutler, who received her first driver's license just three years ago.

"I'm not a car man. I'm not a finance man. I'm not even a man," laughs Cutler.

Cutler spends two to four days a week on Chrysler business at her office at Chrysler's Highland Park, Mich., headquarters or the New York office of her long-time employer, marketing consultancy FCB/Leber Katz Partners. She continues to serve as vice chairman of Leber Katz and works with its clients including Campbell Soup, Citicorp, RJR Nabisco and Marriott Corp.

Her outsider's perspective has won praise from Chrysler's top management. She is said to have good credibility with Chrysler Chairman Lee Iacocca.

"She brings a perspective outside our tunnel vision," said Bennett Bidwell, chairman of Chrysler Motors and the executive to whom Cutler reports.

200 U.S. dealers to visit Porsche

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Bowler

Branitzki

GENEVA — Porsche Cars North America will bring most of its American dealers to Germany next week — a first for the company.

The 200 dealers will come away with a 911 Carrera 4 or 944 convertible to launch the cars in the United States.

Brian Bowler, president and chief executive officer of Porsche Cars North America, said the dealers will take home either the new four-wheel-drive Carrera 4 or the cabrio.

Meanwhile, Bowler said the number of Porsche outlets in the United States is edging downward as company officials in Germany believe it must. But Porsche AG Chairman Heinz Branitzki vowed in an interview here that there is no master plan to reduce the dealer network or define how many dealers are needed.

"We will not touch the dealer body," he said. "What we will do is tell them that everybody is in the business to make profits and we have to figure out if the Porsche business under the new conditions is profitable or not. Then it is the dealer's decision."

The network numbered 322 outlets on Jan. 1, 1987, and 317 on Jan. 1, 1988.

"Since I joined the company in November, we've gone down from 309 dealers to 299," said Bowler. "So some dealers are arriving at those conclusions now. I'm not going to say whether that rate is satisfactory or not. But dealers are businessmen, they're not in there because of some kind of love affair."

"It makes no sense for them to be in the business if their volume isn't at least 80 new cars a year," Branitzki said. "It should be 100 or 120, but at least 80. If it is less than 80, a dealer can't make any profits, forget it.

"With, say, 15,000 cars, you are close to 200 dealers," he said. "But, again, we don't aim to touch things where our main discussions would then be with lawyers. Whatever the figure will be, it will be."

With U.S. volume now half what it was three years ago, analysts feel Porsche could do with a smaller dealer network. But Porsche says it has no plan to systematically reduce the number. Following its disastrous 1984 proposal to circumvent the franchise system by making U.S. dealers sales agents, the German manufacturer is anxious not to rile the dealer body again.

Instead, Porsche says it is encouraging dealers to evaluate the profitability of their franchises. Company officials will not even say what size network they believe is appropriate.

Porsche is drastically reducing the size of its dealer network in Germany, but Branitzki said conditions there aren't comparable to those in the United States.

"In a smaller country, you can tell a customer that the next dealer is 30 kilometers away," he said. "But you can't tell a customer in the States that the next dealer is located 500 miles away."

Past visits by U.S. dealers to the Porsche factory in Stuttgart-Zuffenhausen have usually been piggybacked onto Audi trips, thus next week's visit is unprecedented.

"We're taking our American dealers to Germany in the first week of April; 200 of them are coming to the factory and it's the first time that Porsche dealers of America have ever made this kind of visit," said Bowler.

"Part of the program is that they will have a choice of taking home a Carrera 4 or a 944 convertible. So when they come back to the United States with those cars, that is effectively the launch of the product in our market."

Bowler said the Carrera 4 and 944 convertible should begin arriving in the United States in mid-to-late April.

Last year, sales in the United States fell 33 percent to 15,737, and Bowler predicted a further decline in 1989. "We're talking now

Ford, converters grapple with seat rules

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Recreational Vehicle Industry Association officials said they were encouraged by a meeting with Ford Motor Co. officials late last week in which the company said it will try to continue supplying seat-delete vans to converters after new federal safety standards take effect.

Ford had originally said that it was unlikely that van converters would be able to purchase seat-delete vans after the new standards take effect in 1992. However, the company has changed its position and is exploring alternatives, such as providing to converters front seats that would meet the standards.

Beginning in the 1992 model year, NHTSA will expand Federal Motor Vehicle Safety Standard 208 — which before applied only to automobiles — to vans with curb weights of less than 5,500 pounds. Among other requirements, Standard 208 mandates how much head injury a person can sustain in a 30 mph frontal impact.

All minivans and many full-size vans will have to score below a 1,000-point rating under NHTSA's head-injury criteria. The front seats in a majority of van conversions will be affected.

Seats are a significant part of the upfit package that converters install in vans.

The new ruling will still allow the industry to install captain's chairs, but they will no longer be swivel seats. Converters are concerned about the standard's affect on seat prices and the aesthetics of matching front seats to rear.

There are still many unknowns facing converters, such as the empty weights of Ford's 1992-model vans. The company plans a major restyling of its full-size vans for the 1992 model year.

One RVIA official said that the association will seek a meeting with NHTSA to see if it can get relief for its converter members from the new standard.

The association will seek a lower weight figure for vehicles affected by the standard. Lowering the limit to 5,000 pounds curb weight, for example, would exempt a larger number of full-sized vans.

The RVIA also said it is still seeking guidelines from the auto companies on how to build conversions to meet the standard. So far, the car companies haven't been able to supply them. It will also bring this up at its meeting with NHTSA.

Ford told RVIA officials it would like to extend the company's Quality Vehicle Modifier program to van conversions and motor homes. The program now monitors the quality of other commercial vehicles built by second-stage manufacturers on Ford chassis.

NHTSA bill requires stiff vehicle-safety rules

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A Senate bill authorizing NHTSA to operate through 1991 includes sweeping changes and a host of new safety requirements historically opposed by the auto industry.

The legislation is more stringent than a House bill that died in subcommittee during the last Congress. The Senate version of that bill, however, was approved.

This new bill, introduced by Sen. Richard Bryan, D-Nev., authorizes new safety requirements and funding for NHTSA, setting a ceiling for agency spending at $65.4 million in fiscal 1990 and $68.4 million in fiscal 1991. Only by passing a reauthorization bill, such as Bryan's, can Congress revise an agency's duties, as in the case of NHTSA, and force it to mandate additional safety features onto cars. NHTSA has not had a reauthorization since 1985 though Congress has continued to appropriate money annually.

Although more than a dozen auto safety bills have been introduced in Congress, none are of the magnitude of Bryan's bill, which calls for NHTSA's reauthorization. Bryan is a freshman senator and former Nevada governor.

Bryan's bill calls for:

- Five-mph bumpers.
- Rollover standards for multipurpose vehicles.
- Reinstituting a requirement that petitions for the reduction of the corporate average fuel economy be submitted 24 months prior to applicable model years.

The bill also would give consumer groups the option of appealing to a court NHTSA's denial of petitions to begin a defect investigations. Currently, only automakers can obtain a judicial review of a recall or an investigation.

The bill would require NHTSA to speed up work already under way in several areas and set timetables, specifically:

- Upgrade side-impact protection in passenger cars within one year of the bill's adoption and within two years for multipurpose vehicles.
- Establish roof crush standards, requirements for head restraints, passive restraints, high-mount stop lamps and rollover standards for multipurpose vehicles, light trucks and vans.
- Reconsider vehicle classifications.
- Require rear shoulder belts in all passenger vehicles (except convertibles) manufactured after Sept. 1, 1989, and in all multipurpose vehicles and convertibles made after Sept. 1, 1990.
- Study the feasibility of providing information that compares the crashworthiness of vehicles and labeling vehicles with information about the bumper's capacity to withstand impact.

The Senate commerce committee will hold a hearing on the bill April 5.

Joan Claybrook, a former NHTSA administrator who now heads Public Citizen, a consumer group, said the bill is the strongest proposed legislation since the early 1970s when sweeping safety regulations were passed.

Vehicle trade deficit declines 5.4% in '88

WASHINGTON — The U.S. automotive trade deficit by value for passenger cars and light trucks narrowed 5.4 percent in 1988, the result of an 18.69 percent increase in exports for the year and a slight decline in imports.

Canadian imports prevented further improvement in the U.S. trade imbalance.

Canadian passenger-car imports by value were up 30.1 percent for the year, while Canadian truck imports by value surged ahead 52.4 percent.

Shipments from most non-North American importers were down for calendar 1988. The exception was imports from Korea, Mexico and Brazil.

The value of vehicle exports for all of 1988 was $10.25 billion, compared with $8.49 billion in calendar 1987.

Import value in 1988 fell 1.3 percent to $53.8 billion. Imports in 1987 were valued at $54.53 billion.

The year-end figures show that December's trade deficit by value for passenger cars and light trucks increased 0.9 percent. December's increase follows a 0.7 percent increase in November.

For the month of December, U.S. Commerce Department figures show a trade deficit for passenger cars and light trucks of $4.44 billion, compared with December 1987's figure of $4.41 billion.

Total car and truck imports had a value of $5.25 billion during the month, while monthly car and truck exports were valued at $806.8 million.

Passenger-car exports reached 59,488 vehicles with an estimated value of $664.8 million in December.

Light-truck exports for the month totaled 13,298 vehicles with an estimated value of $142.0 million.

Passenger-car exports were up 272 percent to Japan and 140.6 percent to nations labeled "others" by the Commerce Department.

On the import side for the month, Japan showed a slight downturn in the number of cars imported to the United States, but the value of these shipments increased. Both the value and quantity of Japanese truck imports declined, however.

There were 495,467 finished vehicles imported to the United States in December 1988, compared with 518,638 vehicles in December 1987.

Imports of passenger cars reached 415,671 units for the month with a value of $4.54 billion.

Light-truck imports totaled 79,796 units with a value of $707.5 million.

The value of imported trucks increased 12.9 percent from the year-earlier period, while shipments declined 1.6 percent.

Japanese-car imports dropped 1.1 percent for the month but the value of shipments increased 6.3 percent.

Japanese truck imports were off 16 percent and their value was down 7.5 percent.

Japan shipped 216,717 cars to the United States in December, down from 219,217 a year earlier. Truck shipments were 46,381 units, down from 55,192 units in December 1987.

Also shipping fewer cars in November were: West Germany, off 8.8 percent; Sweden, 8.3 percent; United Kingdom, 37.6 percent; France, 3.1 percent; and Brazil, 63 percent.

No cars were shipped from Yugoslavia last December. In December 1987, 4,027 cars were shipped to the United States.

European sales continue to grow

Gains for February, 2 months belie predictions of '89 decline

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales continued to rise in February, further postponing the expected downturn in the market.

Sales in 17 Western European countries rose 7.5 percent in February after an 11.5 jump in January, according to industry estimates compiled by Automotive News.

Industry executives and analysts had forecast a decline of 3 to 5 percent in 1989 after a record 13 million car sales in 1988. Most still expect the market to weaken this year, but probably not until the second half, which means the 1989 calendar year total could set another record.

European sales for the first two months of 1989 totaled 2,257,200, an increase of 8.8 percent over 1988. Volume was 1,075,800 in February.

Sales in each of the five largest European markets — Italy, the United Kingdom, West Germany, France and Spain — grew in January and February.

Fiat Auto ranked first among manufacturers through the first two months with 16.2 percent of the market. Group sales, including Lancia and Alfa Romeo, spurted 11.3 percent in February to 175,600 and increased 5.9 percent for the first two months to 365,600.

Alfa Romeo, with larger supplies of its 164 sedan, upped sales 12.4 percent for the two months to 39,400 units, good for 1.7 percent of the European market.

Fiat is riding the crest of the Italian market, which ranked first in Europe for the first two months. Fiat brands controlled nearly 60 percent of the home market.

In second place in Europe was Peugeot S.A., which last year finished third behind Volkswagen and Fiat. Sales for Peugeot S.A., including the Peugeot and Citroen divisions, rose 18.7 percent in January and February to 311,100 units, equal to a 13.8 percent market share. Sales rose nearly 12 percent to 142,100 in February.

Automobiles Peugeot climbed 15.6 percent to 89,600 in February, with gains of 10.5 percent to 40,300 in France, 21 percent to 10,500 in Italy, 25 percent to 10,200 in the United Kingdom and 13 percent to 8,600 in Germany.

Volkswagen AG, which edged Fiat for first place in Europe in 1988 according to most estimates, ranked third after two months of 1989. Group share, including VW, Audi and Seat, was 13.6 percent on sales of 306,200, an increase of 8.1 percent. In February, the VW brands were up 9.3 percent to 152,700.

Ford of Europe was fourth with an 11.3 percent share on sales of 255,600 cars, an increase of 5.8 percent. General Motors was next with 251,000 units, an increase of 14.5 percent and an 11.1 percent share.

Renault rounded out Europe's six volume makers with a 10.2 percent share on sales of 229,200, a 7 7 percent improvement.

Mercedes-Benz sales were down 6.1 percent in the first two months of 1989 to 73,500 as it suffered the effects of a declining diesel market in Germany and competition from arch-rival BMW.

Mercedes declined 14.2 percent to 20,300 in February in Germany and was off 9.9 percent for the year to 42,400 in its home market.

Official registration statistics for January in Germany (February registrations aren't available yet) indicated declines for Mercedes in both the mid-sized W124 and compact 190 ranges, while BMW's 3- and 5-series sales both improved over January, 1988.

The W124 slipped from 12,594 in January 1988 to 11,234, while the 190 dropped from 8,669 to 8,313. The 3 series rose 54 percent to 7,028 in January and 5-series sales totaled 7,042 compared to 1,715 in January 1988, when the new version had not yet been introduced.

However, the Mercedes S-class, which fell 18 percent in Germany last year, was up 6 percent in January to 1,382. BMW 7-series sales totaled 1,429 in Germany during January, three units less than in 1988.

BMW remained the fastest-growing marque in Europe. Sales were up 35.4 percent in the first two months to 64,600 and the February increase was nearly 30 percent to 29,400.

In its home market, official German statistics indicate a 99.6 percent gain for BMW in January on the strength of the new 5, with sales hitting 15,624 vs. 7,827 for 1988. Unofficial estimates of the German market in February show a 30 percent gain to 14,500 and a year-to-date jump of 58.4 percent to 30,100 units.

Japanese makers continued to stay well within the overall growth of the European market. Combined sales rose 3.7 percent in February to 107,200 and were up 5.4 percent for two months at 222,500. That gave Japanese carmakers 9.9 percent of European new-car sales.

Nissan, the top Japanese make in Europe, gained ground in the United Kingdom, where it builds Bluebird sedans, and in West Germany. Nissan's British sales were up 25 percent to 21,700 for January-February, and it's German sales increased 49 percent to 12,400.

Across Europe, Nissan sales rose 13.2 percent to 61,500, good for 2.7 percent of the market.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	2 months 1989	Pct. Change vs. 1988
Italy	433,900	+ 3.6
United Kingdom	410,100	+ 9.2
West Germany	403,300	+15.2
France	377,800	+17.8
Spain	169,800	+ 4.9
Netherlands	120,100	− 3.2
Belgium-Luxembourg	85,000	− 2.3
Switzerland	51,400	+16.7
Sweden	45,000	− 6.3
Austria	41,100	+21.6
Finland	38,000	+21.0
Portugal	33,300	+30.5
Ireland	16,800	+29.7
Denmark	13,000	−21.4
Greece	11,000	+23.6
Norway	7,600	−48.7
Total	2,257,200	+ 8.8

Italy ranked first among national markets after two months with sales of 433,900, a gain of 3.6 percent. Sales climbed 12 percent in February to 205,000.

The United Kingdom followed with 410,100, an increase of 9.2 percent with February sales up 4.8 percent to 189,900 units.

Germany, which in recent years has not picked up steam until spring, was 15.2 percent over last year at 403,300 after two months. German sales grew 9 percent in February to 215,500, according to the unofficial estimates.

French sales were up 17.8 percent for the year to 377,800 following a 10 percent rise to 175,900 in February.

After three red-hot years, Spain cooled off in the first two months of 1989. Sales rose 3.2 percent in February to 84,000 and increased 4.9 percent for the year to 169,800. The slower growth followed a three-year span during which car sales in Spain nearly doubled. The surge included a 15 percent rise to 1.06 million units last year.

American buys rights to Irish sports car

Aidan O'Sullivan
SPECIAL CORRESPONDENT

DUBLIN, Ireland — The manufacturing rights for the TMC Costin, the Irish-made sportster, have been sold to an unnamed individual in Atlantic City, N.J. He is reported to be without previous experience in either car making or running a dealership, and plans to restart production in Atlantic City, using a V-8 engine, far larger than the mid-sized family sedan engines used when the car was made in Ireland.

The Atlantic City buyer had been negotiating the deal with Pete and Sean Thompson, prior to the collapse of the brothers' company into liquidation at the end of last year. The deal covers U.S. and Canadian rights only, and the other rights are for sale by the liquidator, Rory Leonard, a Dublin accountant.

The sale price has not been disclosed.

The future of the new model that the Thompsons had on the drawing boards is less certain. Like the previous 2+2, it was designed by Frank Costin, the former Lotus designer, who had a small stakeholding in the collapsed company.

The Irish government had agreed to put up non-returnable grants of $600,000 to help the new-model project along. Those grants may still be available to the new buyer, provided he guarantees the car will be built in Ireland creating jobs.

The Thompsons have said they will not be going into automotive assembly jobs elsewhere. Pete and Sean Thompson are starting a new racing car promotion company in Britain, while accountant Val Thompson has found work outside the industry.

Only 10 years ago the following companies all had small Irish assembly operations, which have now closed: Ford, General Motors, Mazda, Daihatsu, Nissan, Toyota, Fiat and Peugeot.

Attorneys general adopt guidelines for rental-car ads

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The National Association of Attorneys General has adopted a wide range of guidelines to curb what it calls misleading car-rental advertising.

Included are recommendations to end abuses concerning collision damage waivers.

The guidelines are the result of a year-long study by the association's special task force. The guidelines are interpretations of state laws governing unfair and deceptive trade practices and allow each attorney general to enforce his own state's law as he sees fit.

The Federal Trade Commission, although generally approving of the association's guidelines, expressed some concern.

The group's guidelines state:

- Advertisements listing prices should show clearly and conspicuously all key restrictions and conditions of rental, such as any advance reservation or advance payment, the cost of a collision damage waiver, any geographic limitations and any time restrictions on the advertised price.
- Mandatory charges, for example, fuel surcharges, should be included in the advertised price of the rental vehicle.
- Unless the advertisement says supplies are limited, there should be enough vehicles to meet reasonably expected demand.

In the report, the task force stressed the need for full and clear disclosure of terms and conditions as they relate to collision damage waivers and other fees.

It found most persons unprepared to decide whether to skip the waiver or risk raising their payments by as much as 30 percent. It also said some rental agents, who apparently were trying to earn commissions, urged consumers to buy unneeded collision damage waivers or face liability for the value of the entire vehicle.

The task force recommended several changes in state laws:

- Outlawing sales of collision damage waivers by banning the practice of charging a rental-car customer for accidental damage or theft of a vehicle.
- Limiting liability to $500 or less, which may be covered by buying a collision damage waiver.
- Allowing unlimited consumer liability for any loss resulting from consumer negligence so long as the rental firm offers the choice of buying collision damage waivers and so long as the cost is approved by the state's insurance regulator.

The FTC is concerned that the guidelines' stringent requirement on fee disclosure may have an adverse effect on price advertising, which would hurt rather than help the consumer. Because of the differences in charges assessed by franchisees and in surcharges imposed by airports, it might be difficult to build those fees into national price advertising. That may result in reduced price promotion and lead to higher prices.

The FTC is also concerned about banning a distinct collision damage waiver, which could result in "bundling" a charge into each rental transaction, restricting consumer choice.

For example, it noted, when Illinois banned collision waivers Jan. 1, Hertz raised prices 8 percent there. Two other companies also raised prices in Illinois but not elsewhere.

That creates inequity, the FTC said. Some customers have to bear greater costs than others because a state law requires shifting accident and theft losses to the rental companies.

RENTAL

FROM PAGE 1

thereby taking Budget private. Ford will provide about $300 million in cash and will receive nonvoting stock in the company.

Last fall, Fidelco, a New Jersey-based investment firm; National's management, and GM acquired the Paine Webber Group's stake in National. Finnie pegged GM's ownership at approximately 45 percent, for which it invested an estimated $250 million to $300 million.

Each of the four rental giants has agreed to purchase about 70 percent — or more — of its fleet from its automaker-partner, said Budget Chairman Clifton E. Haley. National buys more than 75 percent of its fleet from GM, said National Executive Vice President Robert J. McKenna.

Chrysler Corp. hasn't linked itself financially with a rental company but has hefty sales to Thrifty Rent-a-Car System Corp., Plano, Texas, and sells to Avis and Budget, among others.

"Chrysler has looked at the rental-car market and said there is enough business left for it that's not controlled," said Budget's Haley.

Although Japanese automakers have expressed an interest in buying into U.S. car-rental companies, the likelihood of them gaining ownership in the industry is slim, say those in the industry.

"Japanese automakers probably wouldn't start a car-rental company of their own because that's not their style," Haley said.

"If they want to enter the industry in a partnership arrangement and want volume, then they have to deal with the Big 4, which already have affiliations with domestic automakers."

He said the number of Japanese and European vehicles in the rental-car market is less than 5 percent, but he predicted Japanese penetration will increase if retail sales soften.

"Europeans don't have the dealer network here for the volume of vehicles needed in the rental-car market," said Haley.

The U.S. rental-car market was $8 billion in 1988, and for the last five years has been growing at about 13 percent compounded annually, according to Finnie.

Rental companies are constantly churning their fleets selling older cars and replacing them with new ones under attractive incentives offered by the automakers. That is one of the reasons for the apparent discrepancy between industry revenues and vehicle purchases.

"Powerful economic and demographic trends, including low airfares, increased business travel and two-earner couples taking more frequent vacations, imply the continued growth of the car-rental market," he said.

Further fueling the growth of the industry are advantageous fleet purchasing deals stemming from overcapacity in the car manufacturing industry, he said.

For companies purchasing 5,000 vehicles or more, the auto companies offer volume discounts, rebates, reimbursement for car-rental advertisements featuring a specific manufacturer, guaranteed resale values of vehicles and fleet financing.

Finnie predicts the industry will grow at the rate of 10 percent annually during the next five years.

There are two types of car-rental companies — general use and replacement.

General use comprises 80 percent of the market, renting to individuals for business (called commercial business) and leisure travel. Replacement companies — an estimated $1.7 billion market in 1987 with 300,000 vehicles in their fleets — rent to customers whose vehicles have been stolen or damaged.

"Most commercial rentals — about 95 percent — are provided by companies located on-airport," said Finnie. "That means those companies having rental counters in the airport terminal and vehicle parking slots on the airport premises."

The industry is split between those companies that are on-airport, which means they have counters and lots on the premises of the airport, and those companies that are off-airport like Thrifty or Alamo.

Off-airport operators have taken market share from their larger competitors by offering substantially lower rental rates and by marketing those rates aggressively, said Finnie.

Their advantage is that that they are not required to pay a portion of their revenues — roughly 10 percent for on-airport companies — to local airport authorities, although some airports are trying to charge them an access fee.

The leisure segment is growing twice as fast as the business segment, he said.

"There is a trend toward 60 percent business and 40 percent personal use because of changing lifestyles," said Budget's Haley.

"More people are deferring childbearing, and there are more two-wage-earner households where people are taking more frequent but shorter vacations," he added.

Fleet sizes at the Big 4 have been growing about 7 percent annually for the last few years and are expected to continue to grow at that rate barring recession.

Finnie also noted a reduction in market share of the Big 4 rental companies; together they have lost 20 percentage points to smaller competitors since 1982.

According to Finnie, the Big 4's share of the U.S. airport car-rental market, based on systemwide revenues, was 97 percent in 1982 and 77 percent in 1987.

He said the reason for their loss in market share is the boom in the leisure segment, as travelers seek lower prices from off-airport firms like Alamo Rent a Car Corp.

Program cars — vehicles sold to the rental companies then repurchased by the automakers at a guaranteed depreciation price — are expected to remain an incentive for the rental companies.

Ford offers programs in which 70 percent of a rental fleet's Fords are repurchased and 30 percent are "at-risk," meaning the car-rental companies must absorb any unexpected depreciation, Budget's Haley said.

National's McKenna said GM programs were 100 percent buyback in 1988 but that has changed to 75 percent repurchase and 25 percent at-risk for 1989.

YUGO

FROM PAGE 1

Kole, then acting chief executive officer of Yugo, testified in court last month.

John A. Spiech, the new president and chief executive officer of Yugo America, acknowledged the settlement will "cost some money, but we feel we have to protect the franchised dealer."

Spiech also announced last week that Yugo America will offer its dealers a $750 rebate on retail sales from inventory. That dealer incentive is being applied retroactively to retail sales from March 1 and will run through May 15. Also until May 15, the company will offer dealer discounts up to $1,500 off the wholesale price of Yugos ordered by dealers, depending on the model.

Zavodi Crvena Zastava, the Yugoslavian manufacturer of the Yugo, is footing the bill to jump-start retail sales, Spiech said.

Spiech also announced that once Yugo America satisfies its debts to Manufacturers Hanover Trust Co., which has a lien on more than 1,000 cars, Yugo America will no longer require its dealers to post letters of credit as a prerequisite to getting or keeping a franchise.

Spiech

Spiech said dealers had complained that being required to provide an irrevocable, $300,000 letter of credit that could be liquidated at any time in return for a shipment of possibly unwanted Yugos was a "sword of Damocles" hanging over their heads.

"Once the Manny Hanny debt is finished, I see no need for letters of credit from anybody," Spiech said. "I want to remove that sword of Damocles."

Commisa earlier ruled in Yugo America's favor in the Norauto matter, refusing to allow Norauto to sell the cars pending the course of Yugo America's reorganization in Bankruptcy Court.

The judge ruled that he found "substantial merit" in Yugo America's argument that the Norauto transaction was a "financing arrangement" subject to the court, and not an outright sale.

Crain Communications files trademark suit

DETROIT — Crain Communications, publisher of Automotive News, filed a trademark infringement suit against Fairchild Publications, which recently began publishing Automotive Electronic News.

The suit charges that Automotive Electronic News infringes on Crain's federally registered trademark by use of a name almost identical to Automotive News; its common page size, layout and format; and distribution to the same audience as Automotive News. The suit claims these actions will cause confusion in the marketplace.

The suit, filed Thursday in U.S. District Court in Detroit, seeks an injunction with punitive and exemplary damages against Fairchild.

Fairchild has offices in Troy, Mich.

ECOLOGY

FROM PAGE 1

"Ten years is not really 10 years, because we are already designing cars for the 1994 model year," said Gerald Stofflet, assistant director of automotive emission control on General Motors's environmental activity staff.

Washington insiders believe that some form of legislation to stabilize global warming will pass into law during this Congress, which ends in 1990. By the end of next Congress, many government and industry officials predict fuel-economy measures will surely pass into law.

This comes at a time when manufacturers are having trouble selling four-cylinder cars and demand is higher for larger cars, passenger vans and trucks. Compact vans and light trucks, which account for one of every three vehicles sold in the United States, are certified under a much lower truck CAFE standard of 21 mpg.

Lutz said small cars powered by four-cylinder engines are "almost sales proof" as consumers demand V-6s, V-8s and even a V-10, as envisioned for the Dodge Viper that Chrysler is showing at the New York show.

Analyst George Peterson, president of AutoPacific Group in Newport Beach, Calif., said if a 40 mpg CAFE were adopted, "automakers, especially domestics, would have to make dramatic changes. Cars would have to be much more fuel efficient, more more aerodynamic, much lighter."

Dealing with higher CAFE would be a much more dramatic problem than tighter tailpipe emissions, Peterson noted.

"Tighter emissions could be met at the expense of driveability and fuel economy, but it would not mean changing the size of the vehicle fleet. But fuel efficiency would force a complete downsizing of the entire fleet," he said.

"Scientific consensus leans to the greenhouse effect" as a legitimate concern that causes global warming, said a spokesman for the Senate subcommittee on environmental protection. "But how fast the greenhouse effect will alter the temperature and the climate are in question. The heat of the summer will play a part in the (legislative) decisions that are made, whether they will occur in this Congress or the next."

The greenhouse effect is a phenomenon that is said to occur when carbon dioxide, nitrogen oxides and other gases absorb and reflect heat radiating from the earth's surface. Some theories say the potential exists for a significant increase in the earth's temperature — from 1.5 to 8.0 degrees centigrade — during the next 50 years.

Cars and trucks are said to account for about 30 percent of greenhouse gas emissions, according to officials connected with global warming legislation.

Much of the proposed legislation in Congress aims to reduce levels of carbon dioxide, the predominant greenhouse gas in the atmosphere. Carbon dioxide is produced whenever fossil fuels are burned. Trees absorb carbon dioxide and releasing oxygen in return. Taken to its simplest form, the proposed legislation aims to burn less fossil fuel, develop alternative power supplies and plant more trees.

Ironically, automakers have been striving for 20 or so years to build cars that emitted water vapor and carbon dioxide rather than more harmful hydrocarbons, carbon monoxide, nitrogen oxides and lead.

Donald Zinger, EPA assistant director of the office of mobile sources said, "Carbon dioxide comes from any combustion. It is not a pollutant, occurs naturally and has been looked at as something you like. But carbon dioxide is a greenhouse gas."

"People working on global warming say the way you're going to reduce carbon dioxide is to conserve energy — that certainly is one way to do it — and that is putting pressure on corporate average fuel economy standards," said Richard Wilson, director of the EPA's office of mobile sources.

"CAFE itself is a mechanism. There are other ways of energy conservation. . . . You could have a carbon dioxide emissions requirement. You could have a gasoline tax and use the price of gasoline to reduce demand," he added.

None of the current legislative proposals, including EPA's own preliminary study, however, appear to take that approach.

Chrysler's Lutz said those bills would increase CAFE to a level "ranging from the very difficult to the frankly absolutely utopian and infeasible."

"Yet, that same government is going to continue to be very reluctant to raise the federal tax on motor fuels," he said. "It is patently absurd to permit motor fuels to be sold at a price that, adjusted for inflation, is cheaper than in 1971.

"I don't see how manufacturers can make the increased CAFE if the federal government doesn't make up its mind to raise the gas tax," Lutz said.

Global warming legislation that includes fuel-economy measures has been proposed in the House of Representatives by Rep. Claudine Schneider, R-R.I., and in the Senate by Sen. Timothy Wirth, D-Colo., Sen. Albert Gore, D-Tenn. and recently by Sen. Max Baucus, D-Mont., chairman of the Environmental Protection Subcommittee.

In addition, Massachusetts Senators John F. Kerry and Edward M. Kennedy, both Democrats, have sponsored a acid rain bill that includes fuel-economy standards around 45 mpg by 2000.

Support for global warming legislation is apparently bipartisan.

Michael Totten, legislative aid for Schneider, said the Congresswoman's bill is a policy measure that includes many legislative ideas that could be included in other pieces of legislation. The entire House bill, he said, is unlikely to be voted upon as it is an omnibus, or policy, document.

Any action during this Congress on fuel economy is likely to start in the Senate, Totten said, especially since its new majority leader, George Mitchell, D-Maine, was successful in getting a clean air bill passed by the Senate last year. However, that effort died when the House failed to pass similar legislation. A domestic industry ally in the House is Rep. John Dingell, D-Mich., chairman of the powerful energy and commerce subcommittee. A stalemate between Dingell and committee member Rep. Howard Waxman, D-Calif., helped stall legislation last year.

If new fuel-economy measures are adopted in this Congress, Totten said, they are likely to be tacked onto another bill or be made part of the expected clean air debate in Congress.

Two proposals to increase federal fuel-economy standards almost became a part of an unrelated bill dealing with oil drilling and gas leasing in Alaskan wildlife refuges recently.

"You can understand the tack-on of a CAFE amendment to that bill to be the first skirmish," said the spokesman for the Senate Environmental Protection Subcommittee.

Congress has yet to update the Clean Air Act; extensions of its clean air deadlines ran out last summer.

While an extension of those deadlines is important to local government officials struggling with attaining clean-air standards, the industry will also be watching that legislation closely as well to see if there will be any further tightening of tailpipe emission standards.

Many sources, however, believe the Clean Air Act will be addressed separate from global warming but that fervent support for it will reawaken in this session of Congress.

Robert Crandall, a senior fellow in economics at the Brookings Institute in Washington said, "I suspect the time is right in the environmental arena. The Clean Air Act is up in the air and there is the global warming issue. But they are two separate issues."

James Mateyka, a vice president with the consulting firm of Booz Allen and Hamilton, said, "We follow emissions legislation for our auto industry clients and my read is that there is a fairly significant new wave of environmental legislation. Our sense is that the legislation is less fanatic than in the early 1970's but the auto industry should be looking at the trend."

Auto industry officials say 45 mpg cars can be built, but the question is not "can we build them," but, "will the customers buy them?"

GM's Stofflet notes that a Suzuki-built three-cylinder 1.0-liter Geo Metro model now is rated at 65 mpg, but accounts for less than 0.5 percent of GM sales.

He also noted that GM recently has had to increase the size of certain, previously downsized models, to increase demand.

"If you want to increase fuel economy, you have to tie that in with a gas tax," said Crandall of the Brookings Institute.

"Any other way would suppress the need and demand for new automobiles. . . . Otherwise buyers will hang onto their gas guzzlers. It is not clear however that anyone will have the courage to introduce such a measure," he said.

Totten of Rep. Schneider's office said European experience has shown fuel taxes to be an incentive only to purchase vehicles up to 30 or 35 mpg capability.

Automotive News Staff Reporters Mary Connelly and Roger Rowand in Detroit, Jim Henry in New York and Jesse Snyder in Los Angeles contributed to this report.

California drops bomb

Clean-air plan would kill gasoline cars

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Automakers expressed doubts about the technical feasibility and timing of a sweeping proposal that would eliminate gasoline-powered cars by 2007 in Southern California.

The 123-part plan, approved March 17 by the South Coast Air Quality Management District and the Southern California Association of Governments, includes 19 measures that directly affect the auto industry. The plan is designed to bring a four-county area into compliance with federal clean-air standards within 18 years.

It still must be approved by the California Air Resources Board and the EPA, a process that is expected to take at least four months.

And if approved, the air-quality and government association groups must go back and take up two proposals per month for implementation, which could take as long as five years.

The four-county region has twice failed to meet interim federal clean air standards and is under court order to adopt a plan.

The plan includes a phase-in of vehicles using alternate fuels that would result in eliminating gasoline-powered cars by 2007 and further tightening of California's already stringent limits on emissions of nitrous oxides, hydrocarbons and carbon monoxide.

But the plan also calls for significant changes in Southern California lifestyles. They range from limiting the number of cars per household and ending solo commuting to eliminating charcoal starter fluid and reformulating hair spray and aerosol deodorants.

Marcel Halberstadt, director of the environmental department of the Motor Vehicle Manufacturers Association, said it is not feasible with present emission-control technology to meet the proposed standards.

Spokesmen for General Motors and Ford Motor Co. concurred, saying the plan assumes the development of emission-control technology that currently doesn't exist. But both companies and most Japanese auto importers based in California cautioned that they have not had time to study the plan.

Many aspects of the plan already are being addressed, such as gradually weaning vehicles off gasoline, a GM spokesman said.

Both Ford and GM have fleets of small cars in California that are powered by a mixture of methanol and gasoline. Ford has 1,000 flexible-fuel Escorts in government service in the state, and GM will deliver 2,200 variable-fuel cars to the California Energy Commission in the next two years.

The goal of the Air Quality Management Board is to convert 40 percent of cars, 70 percent of commercial vehicles and all buses to electricity or alternative fuels within 10 to 15 years.

But the ability of manufacturers to take experimental methanol programs from the concept stage to manufacturing, servicing and fueling vehicles with performance and convenience acceptable to consumers in such a short period is questioned by George Peterson, president of AutoPacific Group, a consultant firm in Newport Beach, Calif.

"Everybody has an alternate fuel program, but it's a big leap from experimental designs to something that can be manufactured and meet driveability standards," Peterson said.

Improving emission controls, while a technological challenge, is far less costly to automakers than complete product-line redesigns that would be required to meet tougher fuel-economy standards that the federal government is expected to take up shortly, he added.

The plan for reducing the number of vehicles per household could include heavily taxing the second and subsequent vehicle registrations.

If that happens, vehicle purchases in the Los Angeles area would drop and eventually reduce dealership values in the area, said Christopher Cedergren, senior analyst for J.D. Power and Associates, Agoura Hills, Calif.

But it's unlikely to happen because no elected politician would dream of taking cars away from Southern Californians, said Mickey Garrett, executive vice president of the Greater Los Angeles Motor Car Dealers Association.

Of greater concern to auto dealers is meeting even tighter controls on emissions of paint solvents from their body shops, he added.

Nissan, which is the only Japanese company represented on an SAE committee studying how to replace chlorofluorocarbons in air conditioners and refrigeration equipment, is ready to launch a Freon recovery and recycling program for its dealers as soon as federal certification is received.

Transplants pace mid-month gain

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

A few fragments of good news for automakers in the United States blew in on the blusterous winds of mid-March. Retail deliveries of U.S.-built cars rose a skimpy 2.83 percent.

Sales in the March 11-20 sales period climbed to 194,597 units, up from 189,245 units in the year-earlier span.

Transplants led the way and all the domestic makers reported sales improvements except Chrysler Motors, which noted a 16.16 percent decline.

The average daily-selling rate totaled 24,325 units, up from 23,656 units a year earlier. Both periods had eight selling days.

Ford Motor Co.'s sales rose 6.08 percent while General Motors inched up 0.21 percent. Sales improvements for Buick, Cadillac and Chevrolet offset drops for Oldsmobile and Pontiac.

Toyota dealers delivered 5,027 cars, compared with 1,169 last year, a gain of 330.03 percent. Of the Toyotas sold, 2,592 were Corollas and 2,435 Camrys.

Mitsubishi, a newcomer to production here, reported retail sales of 557 units. The company's Eclipse is produced in Illinois.

Also reporting sales gains were Mazda, 86.27 percent; Nissan, 55.81 percent; and Honda, 24.51 percent.

PRODUCTION

Good Friday slashes car, truck output

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic car and truck production fell from the prior week's and year-ago week's totals as all but one U.S. assembly plant closed for Good Friday.

Scheduled truck output was 69,543 units last week, 28.02 percent below the prior week's 96,610, which was the highest weekly total since the 96,725 trucks assembled the week ended Dec. 10, 1988.

Last week's projected truck build was 21.39 percent below the year-ago week's 88,469.

Year-to-date, 1,079,959 trucks have been assembled, 6.54 percent more than the 1,013,618 built last year at this time.

Automakers scheduled assembly of 127,636 cars last week, 16.35 percent below the previous week's 152,582 and 13.66 percent fewer than the year-ago week's 147,821.

So far this year, 1,773,499 cars have been built, 14.25 percent more than the 1,552,357 completed last year at this point.

Companies split last week's estimated production as follows: General Motors, 48.50 percent; Ford Motor Co., 24.87 percent; Chrysler Motors, 12.38 percent; Honda of America Manufacturing, 4.86 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.02 percent; New United Motor Manufacturing Inc., 2.51 percent; Nissan Motor Manufacturing Co. U.S.A., 1.61 percent; Toyota Motor Manufacturing U.S.A., 1.59 percent; and Diamond-Star Motors, 0.66 percent.

GM's Janesville, Wis., truck plant shut down March 20 for model changeover; it will be closed until late July. About 1,000 workers are temporarily laid off.

On April 10, GM will shut down its Reatta Craft Centre in Lansing, Mich., for one week to adjust inventory.

GM's Wentzville, Mo.; Doraville, Ga.; and Willow Run, Mich., plants resumed production last week after being idle for inventory adjustment.

All assembly plants except Toyota's Georgetown, Ky., facility were closed Good Friday.

Short week felt in Canada, too

Canadian assembly plants were closed Good Friday, causing car and truck production to dip from the prior week's and year-ago week's builds.

Last week's targeted car output of 18,678 fell 8.47 percent from the previous week's 20,407 and dropped 29.32 percent from the year-ago week's 26,426.

So far this year, 234,615 cars have been built, 11.37 percent below the 264,707 assembled last year at this time.

Truckmakers scheduled 15,987 units last week, 6.15 percent below the prior week's 17,034 and 20.02 percent below the year-ago week's 19,989.

Year-to-date, 240,744 trucks have been assembled, 4.54 percent more than the 230,291 completed last year at this point.

GM maps franchise for '90s

Dealers will fight more takeaways

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — At a time when dealers are accusing General Motors of chiseling away at their profits, the automaker is developing a new dealer franchise agreement that will carry it into the competitive 1990s.

The new agreement, which in essence is a contract that allows a dealer to sell GM-built vehicles, replaces the present five-year agreement on Nov. 1, 1990. The agreement, according to dealers involved in developing the new contract, could include:

- A new process for resolving disputes between GM and dealers.
- More specific sales-target and customer-satisfaction performance levels for dealers.
- More detailed requirements for in-dealership high-tech equipment.
- More detailed requirements for dealership employee training.
- A change in the franchise buy/sell clause that dealers fear would make it harder to sell the dealership to offspring at lower-than-market prices.

What the 1990 franchise agreement won't contain is a wholesale adoption of Saturn-type features.

While GM will reveal few specifics about what it wants in the agreement, Robert H. Ogden, GM's general director of sales operations and dealer relations, said Saturn's clean sheet of paper approach and dealer ranks of no more than 200 allowed it to make its franchise agreement different from GM's.

"We're working with a mature organization of 10,000 existing

Dealers sliding toward red ink

By Laura Clark and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

New-car dealers' pre-tax profit margins declined in 1988 and now are sliding into the red.

Preliminary figures collected by the National Automobile Dealers Association reveal that pre-tax margins dwindled into net losses for a growing number of dealers during the first two months of this year.

The report could indicate the worst January-February performance since the end of the recession in the early 1980s.

The news comes on the heels of a poor dealer profit performance in 1988. NADA reported that nationwide pre-tax profit averages for domestic and import dealerships combined sunk to 1.6 percent of sales last year from 1.9 percent in 1987.

January-February profits are traditionally weak, but the new figures appear to be abnormally bad, said NADA Executive Vice President Frank McCarthy.

"This looks like the worst January-February period we've had since 1983," McCarthy said. "A lot of dealers are in the red."

Jake Kelderman, NADA executive director of industry affairs, cautioned that the analysis will not be complete for another two weeks, but he said the numbers coming in "are not encouraging by any means."

"The resilience within the dealer network just isn't there now," Kelderman said.

Tom Webb, NADA statistical director, said he has not completed analysis of February survey results, but the average dealer pre-tax margin in January was "just barely black."

NADA measures and reports profit margins as net pre-tax income as a percentage of sales.

NADA President Ron Tonkin said it was his impression from talking to dealers around the coun-

Ford leads way to 2.9% loans; GM follows

By David Versical and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

The auto industry headed into another incentive bonanza last week by tempting customers with the most aggressive rebates and discount finance offers in nearly two years.

But the lead player came as a surprise. Ford Motor Co. — the only Big 3 automaker that has increased its market share this year — kicked off the latest round on Wednesday. Ford is now offering financing as low as a 2.9 annual percentage rate or cash rebates worth $500 or more on most of its cars.

General Motors echoed Ford's offer with a program that began Friday. Like Ford, GM offered 2.9 APR rates on 24-month loans, 5.9 for 36 months, 6.9 for 48 months and 9.9 for 60 months.

Volkswagen, trying to pump some blood into an anemic 1989, began a novel new program that essentially adds between $500 and $2,000 to the downpayment on financed purchases. Customers who pay cash get a U.S. savings bond.

And Toyota provided some dealer incentives worth up to $1,000 on 1988 and 1989 Camry models.

Chrysler Motors, meanwhile, said it was studying the Ford and GM moves. As of Friday, however, Chrysler was sticking with its current program. That deal offers financing rates between 4.9 percent and 10.9 percent or cash rebates worth $300 or more, plus additional cash discounts for current owners.

The latest efforts came as little surprise. At the start of the year, analysts had predicted that interest rates would climb and that automakers would have to rely on aggressive sales programs to keep things moving. But the prime interest rate jumped twice in Febru-

Ford scales back '89 sales forecast

By David Versical
AUTOMOTIVE NEWS STAFF REPORTERS

Rising interest rates have prompted Ford Motor Co. to trim its 1989 car and truck sales forecast.

Ford opened the year with the Big 3's most optimistic sales projection — 15.4 million. It has now backed off that number.

"Ford is still forecasting the year will come in above 15 million," said Robert L. Rewey, vice president for North American sales operations. "But certainly there has to be concern over the very rapid movement of interest rates that occurred in the first quarter."

Ford had accounted for the prospect of higher interest rates in its earlier forecast. But that was before the prime rate absorbed back-to-back increases in February. At 11.5 percent, the prime is now the highest in more than four years.

The prime interest rate is the rate commercial banks charge their best corporate customers and is commonly used to measure the cost of money. A rising prime rate could cause a slowdown in borrowing and spending.

Rewey said the increases have

Geo models: Chevrolet's marketing answer to a growing import market

Geo line no barn burner, but Chevrolet is optimistic

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

As Geo receives its six-month report card, Chevrolet's marketing chief expressed cautious optimism about its overall performance.

He shooed aside worries about increasing supply, a softening market, import share decline and a host of dealer woes and said time should prove that Geo will make the grade.

"I guess I'd give it a B-plus," said Michael H. Erdman, Chevrolet general marketing manager, reflecting on the import franchise's first few months as a separate marketing entity.

See related story, Page 57

In the middle of the 1988 model year, Chevrolet said it would merchandise its captive imports plus the Nova under the Geo label for 1989. It offered the Geo franchise to its 4,900 dealers, and about 4,100 are handling the line.

Despite Erdman's assessment,

KIT WOES

London Motors fights shove to bankruptcy

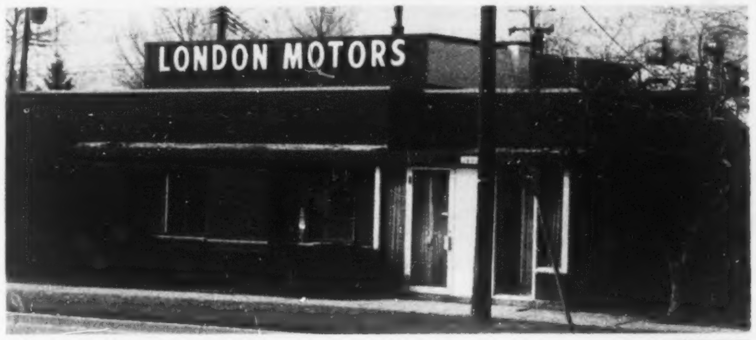
By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

London Motors, an Inkster, Mich., kit car manufacturer, will tell a federal Bankruptcy Court in Detroit this week that it is close to a deal with new financial backers and can repay its creditors without being forced into involuntary Chapter 11 reorganization.

On Jan. 30, three car dealers, who say London Motors owes them approximately $175,000, filed a petition with the U.S. District Court in Detroit to place the firm in involuntary Chapter 11 reorganization.

The dealers claim that London Motors failed to deliver MGTD-replica "London Roadsters" and refuses to refund their advance payments.

Creditors of London Motors have filed claims totaling $200,000 with the Bankruptcy Court.



GLENN TRIEST

Headquarters of London Motors in Inkster, Mich., where London Roadsters are assembled

The company faces similar complaints from more than 27 car dealers, and 14 consumers — who made deposits of as much as $15,000 — have filed complaints with the Michigan attorney general's consumer protection division.

State records show that some of those complaints have been settled by London Motors.

In court papers filed last month, the company said it is trying to reorganize its finances with new financial backers and will resist its creditors' petition to place the company in Chapter 11 bankruptcy.

Morris Goodman, attorney for London Motors, blamed the company's financial troubles on a $1 million loss he said it suffered a few years ago when an agreement to build a convertible version of the Pontiac Fiero fell through after London Motors purchased tooling for the project.

Goodman said the company also lost money when it borrowed from a bank that later dissolved and called the loan early.

In court papers filed March 20, London Motors said its president and sole owner, Ian Stevenson, has met with "several groups of investors to refinance his companies." Stevenson declined to be inter-

Tonkin targets fleet deals, sets meeting

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

As the core of Ron Tonkin's "Rough Riders" prepares for its first meeting April 10, the new National Automobile Dealers Association president is cranking up his crusade against what he considers factory injustices.

In a fiery cassette tape distributed last week to dealers nationwide, Tonkin decried the continuing erosion of U.S. dealer profits and discussed suing carmakers that sell to leasing companies in competition with franchised dealers.

Tonkin

The rousing eight-minute cassette also warns of NADA's readiness to take the factory subsidy issue to Congress if the automakers don't heed the dealers' mounting protests.

Tonkin's challenge to the automakers comes at a time when he says his initial group of 200 Rough Riders has grown to 400 dealer members, although some of his original appointees refused to serve. And NADA's chief staff member says the association is getting masses of mail supporting Tonkin's crusade.

"As your president, I am confident that we could have legislation introduced that would stand better than a 50-50 chance of becoming law," Tonkin said on the tape, which went to all 20,000 NADA dealer-members and an additional 4,500 non-member dealers.

Spokesmen for each of the Big 3 said they had not heard the tape and declined to comment on Tonkin's remarks on fleet subsidies and falling dealer profits.

"Every fleet sale that Chrysler Corp. makes goes through a dealer," a Chrysler spokesman said. "But, Mr. Tonkin never gets around to saying that. Mr. Tonkin has decided he's going to ride his horse for a while, I guess."

A spokesman for General Motors said, "We are in constant contact with NADA. If he (Tonkin) has something he wants to talk to us about, we're always willing to meet with him."

A Ford spokesman also expressed surprise when told of the NADA tape. "We've always gotten along very well with our dealers. We will deal with any problems our dealers have the same way we always have, through our national dealers' council," he said.

In 1985, NADA failed in an effort to get congressional support on the fleet subsidy issue. An Iowa

Ford-Soviet plant deal collapses

By David Versical and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

Ford Motor Co. has withdrawn from a group of U.S. companies working together to set up joint ventures in the Soviet Union.

The announcement marked an abrupt — and perhaps temporary — halt to Ford's efforts to break into the Soviet auto market. A year ago, Ford helped form the American Trade Consortium, a group of seven companies attempting to remove a thicket of economic and political issues that have blocked business opportunity in the Soviet Union.

Ford declined join the other companies in signing a general trade agreement with a Soviet consortium last week. The agreement was seen as a necessary step for each company to pursue its own ventures. Ford, the only automotive company in the group, said the understanding did not offer enough assurances to support a project as large and as complex as it had planned.

The company said it withdrew because it did not want to slow the progress of the other firms, whose projects are quite different from the automaker's.

Ford envisioned a two-stage strategy that would have seen it exporting European-built Scorpios and later building the cars in a Soviet plant.

"We are disappointed," said Philip E. Benton Jr., president of the Ford automotive group, in a statement. "The Ford project included a substantial initial investment for a major new automotive complex. To succeed, it would have required that the Soviets adopt new and innovative financial arrangements."

Ford Werke sources in Cologne, West Germany, said the deal collapsed over a requirement that Ford invest heavily in a new production complex in Gorky. The Soviets made a multi-faceted proposal for compensation that Ford found unacceptable, sources said. Ford reportedly decided the investment was risky without assured means of early repayment.

Benton said Ford is still interested in a joint venture, and it feels it made definite progress in the negotiations. A major project could still be completed if conditions for doing business in the Soviet Union become "better defined," he said.

Ford's interest in a venture was triggered in 1987, when the Soviet Union invited Ford to look into business opportunities there. In April 1988, Ford announced that it had joined the consortium. The other members are Chevron Corp., Eastman Kodak Co., Mercator Corp., Johnson & Johnson, Archer Daniels Midland Co. and RJR Nabisco.

Questions over legal matters, work permits, taxation and ownership rules were among the issues that had to be resolved, a Ford spokesman said. Another was currency.

The Soviets first offered to pay Ford in oil, sources said. Negotiations were held between Ford and Chevron, a consortium member that will seek oil and gas exploration sites in the Soviet Union. Oil and gas are thought to offer the best prospects for generating hard currency revenue for the country.

However, Ford and Chevron could not reach an agreement, sources in Europe said. They said the talks with Chevron broke down because Ford would have had to wait roughly five years for repayment because of depressed world oil prices. As an alternative, the Soviets offered to pay Ford in gold. But once again, low world prices would have required Ford to wait too long for compensation.

A company source said discussions between Ford and the Soviets will continue on a much smaller scale outside the framework of the consortium.

California emission rules urged for New York

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Health and environmental groups are pressing New York and other Northeastern states to adopt California's stricter air pollution standards.

"We want to apply existing technologies that the manufacturers already have," said Russell Hinz, a spokesman for the American Lung Association of New York State in Albany.

He said proposed legislation banning cars that don't meet the California standards is expected to be submitted to the New York Legislature within three months.

Manufacturers would have to be given at least two years' notice of the impending change, so the new rules would not take effect until the 1992 model year or 1993, he said.

"So far, only California benefits from the advanced clean-car technology available today," said a statement issued by the New York Acid Rain Coalition, which includes the Lung Association and such groups as the Sierra Club and the Appalachian Mountain Club.

"By adopting the California auto emissions program now — including the more stringent standards California plans to adopt this spring — New York can reduce carbon monoxide and hydrocarbon emissions from motor vehicles by 2010 as much as 50 percent, and nitrogen oxide by 36 percent," the coalition said.

California's emission control standards are tighter on some pollutants, but are more lenient on carbon monoxide. The federal standards are 0.41 grams per mile for hydrocarbons, 3.4 gpm for carbon monoxide and 1.0 gpm for nitrogen oxides. California allows only 0.39 gpm for hydrocarbons and 0.4 gpm for nitrogen oxide, but 7.0 gpm for carbon monoxide.

William Sessa, a spokesman for the California Air Resources Board in Sacramento, said last week that California is expected to adopt the tougher standards by early this summer.

The tighter requirements, if adopted, would go into effect in 1993 and limit hydrocarbons to 0.25 gpm, carbon monoxide to the federal 3.4 gpm and keep nitrogen oxides at 0.4 gpm.

Sessa cautioned, however, that the California standards were devised to address "some of California's unique air quality problems. Whether they would help other states is up to the judgment of the other states."

Sessa said most cars already meet California standards without having to be modified mechanically, though they may have to be "recalibrated" to pass the California regulations.

Marcel Halberstadt, a spokesman for the Motor Vehicle Manufacturers Association, agreed with that assessment. "Clearly, it is technically feasible for the manufacturers to make cars that would measure up in California to be sold in states other than California," he said. "However, if the idea is to achieve cleaner air, we're not at all sure that doing it this way is going to achieve that end," he said, noting that the California standards were designed for conditions specific to that state.

Hinz said such a move would "not place any undue burden on the consumer." He estimated that equipping cars with California-style emissions packages would cost manufacturers a maximum of about $100 per car.

The California Association of Governments and the South Coast Air Quality Management District recently endorsed a radical anti-pollution plan that would ban gasoline-powered cars in Southern California by 2007.

Hinz said if New York adopts the present California guidelines now, New York could avoid having to consider such radical measures.

Dealership bonuses rank high in Infiniti program

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — As Nissan's Infiniti Division prepares to enter the luxury segment of the U.S. market this fall, it has placed high priority on developing dealer sales and service programs that it feels are the best in the business.

To do that, Rick Lueders, national parts and service manager, said Infiniti talked to such successful "best-in-practice" retailing companies as Mercedes-Benz, McDonald's restaurants and the Nordstrom department store chain and studied their training and retail programs.

Lueders said the first step was to develop a policies and procedures manual on how they want Infiniti dealers to perform parts, service and sales.

"The next thing we are going to do is design a computer system that will integrate all in-dealership departments and programs," he said. "It will help run service, parts and sales. It also will do finance and insurance, scheduling and loading, parts cataloging, parts ordering and inventory management. Everything the dealer needs to operate the dealership."

The final step, according to Lueders, is the creation of a marketing fund for the dealers. He said the fund is currently coded, not too coincidentally, CSI — Customer Satisfaction Index. However, a committee is working on a permanent name for the fund.

Lueders said the division-generated fund will be used to pay bonuses to all dealership personnel based on the kind of performance they actually deliver at the contact level with the customer.

Lueders said Infiniti is developing a measuring system to determine the amount of the bonuses for the employees. The marketing fund is viewed as additional compensation that will be used to reduce personnel turnover at dealerships. He said payments likely will be made to employees quarterly.

All of the policies and procedures, the computer system and marketing fund, will be an important phase of the dealer training program Infiniti will conduct at its new national training center in Scottsdale, Ariz.

The $5 million, two-story, 27,000-square-foot building will serve as the headquarters for the company's comprehensive training program, incorporating all dealer sales, service parts and management functions.

As the model for all future Infiniti dealerships across the United States, the Scottsdale facility will be used to test and fine-tune dealership design and operations.

Lueders said the training center also will have a feature called Dedicated Delivery — a night depository system for 24-hour delivery of parts.

Approximately 65 Infiniti dealerships will be built prior to the introduction of the cars. Each dealership will be based on the training center's design and concept.

After the training sessions are completed and shortly before introduction of the cars, the training center will be converted into a functional dealership and sold to Herbert C. Pell III and Michael J. Heims, the Infiniti dealers in Scottsdale.

This $5 million dealer training facility will become the Scottsdale, Ariz., Infiniti dealership

Training sessions for dealers will begin shortly after construction is completed in early May, according to Lueders. The dealer training sessions will consist of facility and marketing presentations and a ride-and-drive of the new cars.

Lueders said training for technicians will begin about Sept. 18 in shifts of two classes of 12 each for two weeks.

He said Infiniti expects to train an average of one or two technicians per dealership in the first wave of phase of franchise appointments.

"We are recommending the dealer select general technicians rather than specialists for Infiniti training," Lueders said. "We are looking for guys with all-around service experience."

While the dealers must have trained technicians at start up, Lueders recognizes that there probably won't be much work for them in the initial stages, hence the bonus fund.

"We know, as anyone else in the industry — and you can check with the Acura dealers — the technicians are not going to be very busy on day one, unless the dealer goes in with a good used-car operation and predelivery inspection," Lueders said. "Our best guess tells us that each dealership on day one will have one or two technicians."

"What we have decided to do is encourage our dealers to have used-car operations. We think that for the health of the store and the health of the franchise, it is almost a necessity from day one," he said.

Asked whether a technician could live on that quarterly payment if there were no service work in the dealership for a few weeks, Lueders said, "Flat-rate day one for the average general technician is not going to work at our dealerships. We are going to have to come up with a different kind of pay plan and a pay system. We are going to recommend that to our dealers, but we are not yet quite there with such a plan. In the next month or two, we should have that finalized.

"But from day one, the dealer is not going to be able to have a technician on the typical flat-rate pay plan. There is no way to keep a guy. It's just impossible," he said.

"What we are trying to do, and it is a big involved process, is trying to figure out day one what is the minimum head count the dealer has to have to open up," Lueders said, "and then take a snapshot of that one year down the road."

SERVICE INDEX

Shop volume rises for '88, makes strong start in '89

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships in December rebounded from declines in November and continued to expand after the first of the year.

In January, shop volume rose 9.8 percent over January 1988, according to the Automotive News Service Index.

That gain followed a shop volume increase of 2.6 percent in December, which boosted total 1988 shop volume 2.1 percent above 1987 totals.

The December advance, followed by an even better performance in January, capped a string of mixed results in the second half of 1988. While shop volume increased each month in the first half of last year, as well as in August and September, it was off slightly in July, October and November.

Parts and accessories sales to off-premises customers in December were 0.5 percent above the year-earlier total, although for all of 1988 the total rose 4.2 percent above 1987.

In January 1989, off-premises parts and accessories sales were 9.5 percent above January 1988 sales.

Gross profit on all labor, parts and accessories sales was the fastest growing segment of the shop index in 1988, as business in that category outpaced 1987 by 5.1 percent.

However, for December, customer and warranty shop parts sales, up 4.9 percent, posted the largest gain.

In December, the only category showing a decline from the year before was repair orders written, off 0.3 percent, although for the entire year, repair orders written declined 0.6 percent and total labor sales declined 2.6 percent.

In January, all categories posted year-to-year gains over 1988. In fact, repair orders written, up 5.8 percent, was the only category not to post a double-digit gain.

Schools respond to dealer needs

Automotive courses also include computer, interpersonal skills

By John Wisely
SPECIAL CORRESPONDENT

The quest for customer satisfaction and a high customer satisfaction index rating has not only affected the way dealerships are operated, it has also changed the way technical education is conducted.

Jack Richards, head of automotive studies at Ferris State University in Big Rapids, Mich., said that hiring practices indicate the attribute dealers want most in technical people is the ability to "handle driveability problems and relate with the customer."

Technical schools are responding to those needs by supplementing their traditional automotive curricula with more computer courses and with other courses intended to improve the interpersonal skills of the students.

Many of the schools that are affiliated with universities or community colleges are expanding their liberal arts requirements, such as English, speech, psychology and human relations to make the mechanic more responsive to customers' needs.

Typically, a technical school that is part of a college or university will have a two-year program leading to an associate's degree in applied science and then will offer an optional two-year program leading to a bachelor's degree in management.

The liberal arts courses are usually standard at most schools, but computer diagnostics courses can present a dilemma for educators. Because computer diagnostics are changing constantly and each manufacturer has its own system, the schools must decide which systems to teach and how to teach them.

Although all systems are different, they are beginning to show some similarities. "Everybody went their own route for emissions standards in the 1970s, but things are just now starting to look alike," Richards said. He added, however, that the systems are a long way from being interchangeable.

Students currently employed in the industry can be taught the system used by their employers. But students not yet employed do not know which system their future employer will use, so they must be ready for just about anything.

Richards said it is impractical to try to teach all systems on campus, so his school offers a comprehensive diagnostic program and some programs from specific manufacturers. He also said that good basic technical training is transferable and will make it easier to learn any kind of computer system.

The technology changes have also increased the need for hands-on training and, again, the schools have had to respond. Bob Henrickson, director of Mo-Tech Automotive Educational Center in Livonia, Mich., said, "Our courses are about 50 percent hands-on training in the classroom and 100 percent hands-on in the shop."

One way to get additional hands-on training is through internships. Harold Rockwell, dean of automotive studies at Northwood Institute in Midland, Mich., said that more and more of the students do not come from automotive backgrounds and the reasons for internships have changed.

In the past, the students came from automotive families and were looking for money in a summer job instead of getting experience. "Now, they are looking for something that is going to help them when they get out in the business," Rockwell said.

In other words, the learning experience that comes from working at a dealership or for a manufacturer is worth more to the student than the income that could be earned elsewhere. Rockwell also said it is important for students to express themselves well and to be prepared for interviews. Northwood students appear before a panel of dealers to answer questions before they can be certified, he said.

Internships traditionally are served at a dealership or manufacturer to give the students experience in their field. But some schools now provide that type of work environment on campus.

Shoreline Community College in Seattle has its own model dealership on campus. It is run by students. The students perform all the duties of a dealership staff, from repairs to paperwork, except actually selling cars.

Jim Hammond, executive director of the Puget Sound Automobile Dealers Association, which helped fund the model dealership, said it is an innovation in technical education because its teaching is twofold.

"The model dealership teaches them not only how to handle the cars they will be working on, but how to handle the customers as well," Hammond said.

The dealership cost $2.3 million and was funded by several businesses in the Seattle area and by the state of Washington. That price puts it out of range of most schools but others are using the same concept to a different degree.

Oklahoma State University Technical Branch at Okmulgee also has students working in a real-world atmosphere on campus. Steve Doede, head of the automotive technology department, said students work at the on-campus National Automotive Parts Association store and serve all the body shops on campus as well as the students' needs.

Videotape assures new-car buyer that dealership CAREs

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The new Chevrolet Nova had been sitting in the parking space outside Jacqueline Steinhart's apartment in Alexandria, Va., for nearly two weeks. Her infatuation with the shiny new car she bought was just about wearing off when a videotape called "Because we CARE" arrived in the mail last fall.

Steinhart's first reaction was, "What in the world is this?"

To Steinhart's surprise, the key employees of Pallone Chevrolet, Springfield, Va., where she had bought the Nova, appeared on her television screen, thanking her for the purchase and telling her about the dealership's hours and services.

The tape provided special telephone numbers, outlined how she could drop off her car at night for service the next day, and talked about maintenance schedules.

Steinhart was impressed: "There is a great deal I don't know about the maintenance and repair of my car — that can be a very scary feeling. The video gave me a comfortable feeling in that I could call Pallone and they would take care of my needs."

And when her Nova hit 5,000 miles she popped the tape back into her VCR and was reminded it was time for an oil change.

Steinhart is one of thousands of new car buyers in the Washington area who has received a videotape from a new-car dealer. The tape was prepared by VSI Productions, a Virginia-based company.

VSI is the brainchild of an unlikely duo: Keith Johnson, a former drummer for rock bands like Kiss, who professes to love cars but knows little about them, and Ron Poland, a car buff and 22-year veteran of the car business who has done everything from sell cars to manage a dealership.

Johnson and Poland joined forces two years ago to produce television ads called Video Car Lot, which featured dealers selling used cars. It was through exposure to the retail car business that Johnson realized dealers had unjustly gained a bad image.

"I could go up to anyone on the street and say, 'Give me your first reaction to these two words — car dealer' and the reaction would be negative," Johnson said. "If I asked them to react to the words 'used car dealer,' I'd usually get an expletive as the first word."

Poland suggested that he and Johnson put their skills to work at developing a video product that could help dealers shake this negative image.

Johnson was hesitant: "I just didn't see it."

But Poland persisted. "Many dealers are community-minded and involved . . . but the only thing that the public hears is about dealers turning back mileage and dealers who falsify contracts for new cars."

Johnson was persuaded a video program would work, provided the tapes were short enough to keep a customer's attention. They named the product Because We CARE (short for customer awareness and reassurance of excellence). The tapes are designed for each dealer and are about 12 minutes long.

An interested dealer is sent a script that suggests which employees could be shown on camera and what kind of message they could deliver. In addition to providing information, the videotape can help a dealer focus on problem areas, reinforce a dealership's commitment to correct errors and attempt to leave the customer satisfied with his selection of that dealership.

"Some put on their service managers and (they) say, 'We're not perfect. If we make a mistake, let us try to fix it.' " He said this kind of approach has helped some dealers improve their customer satisfaction rating.

Other dealers use the videotape to say their service department is just as competitive as the neighborhood garage for a new muffler or brake job, the kind of work some car owners wouldn't think of having performed at a dealership.

The tape is also a "hassle-free" form of advertising. After the initial taping session, the dealer just provides VSI with the names and addresses of new-car buyers, and VSI ships the videotapes.

VSI's fees are based on the dealership's annual sales. Fees range from $5,650 for producing the tape and $14 per tape (for the dealer who sells 360 or fewer vehicles annually) to no charge for production and $7.65 per tape for dealers whose sales volume exceeds 4,800 vehicles annually.

Dealers say the cost is worth the investment.

Mary Brandis, secretary/treasurer of Jennings Springfield Toyota in Springfield, Va., said her customers are pleased with the tape. Brandis said she couldn't say yet whether the tape has boosted sales, but she doesn't regret the investment. "They did a good job," she said.

Barry Drain, general manager of Pollone Chevrolet, said the dealership is pleased with the program. "We got good response. The videos did extremely well."

But Poland warns the videotape is no substitute for good service. "Creating the proper image will get the customer back the first time. But if you treat him like dirt, I don't care what kind of image you have, he'll never be back," he said.

California tightens gray-market air rules

By Tom Lankard
SPECIAL CORRESPONDENT

SACRAMENTO, Calif. — Emissions standards for used gray-market cars have been tightened in California.

Under the state's rules, recently approved by the EPA, gray-market cars more than two model years old must be equipped with an emissions control system previously approved by the state's Air Resources Board for that car and its engine.

Also, the car must meet the state's standards for the year of its original manufacture. Previously, used gray-market cars had to meet only the less-stringent federal standards.

The state's regulations for new gray-market cars, adopted in 1987 and covering cars two model years old or less, require that a car meet the emissions standards for the year it is first licensed in the state.

Any company that wants to modify direct imports for sale in California must now meet three basic requirements to obtain the state Air Resources Board's approval.

- It must use an emissions control system that meets the board's requirements.
- It must have a recall and warranty program.
- It must have insurance or post a bond with the board to cover the costs of a recall in the event the board orders one and the manufacturer is no longer in business.

Prior to the change, meeting federal standards for used gray-market cars meant nothing more than having a car's emissions control system altered to the extent necessary to get the car past a federally prescribed test on a dynamometer. That was the extent of the modifier's legal responsibilities to the car's buyer and government clean-air agencies.

In mid-1988, however, the EPA began its own phase-in of stricter rules for direct imports in all states except California. Generally, the federal rules for cars less than six model years old are similar to California's.

For cars between six and 20 model years old, EPA-licensed modifiers may use the dynamometer test to prove the effectiveness of their emissions control system.

In all cases, though, the modifier must have a recall and warranty program to cover any failures.

EPA's rules exempt cars more than 20 model years old.

L.A. auction adds inspection plan

"My Mechanic Dealer Protection Plan," an inspection service for customers, has been added at the Los Angeles Dealer Auto Auction.

"The program offers dealers the chance to evaluate the mechanical condition of their purchases with on-site, third-party inspections," said John Duca, auction manager.

My Mechanic Corp., a Massachusetts-based company offering diagnostic services to the automotive industry, backs its inspections with a seven-day warranty on the engine, transmission, drive axle, air conditioning and frame.

Cost of the inspection and warranty is $35. The fee is split between My Mechanic and the auction.

The program operates as an after-sale inspection but a spokeswoman said eventually it will be converted to a pre-inspection program.

Dealers make their purchases, then bring the vehicles to My Mechanic's on-site facility for evaluation. A seven-day warranty is issued on all vehicles that pass inspection.

If the vehicle doesn't pass, the My Mechanic inspection report can help a buyer reach a quicker and more equitable settlement with the seller through arbitration, said Bob Wolfsen, auction operations manger.

All mechanics are certified by the National Institute for Automotive Service Excellence.

"Dealers are just like consumers," Wolfsen said. "They worry about ending up with somebody else's problem, too. And unlike consumers, lemon laws don't protect them."

The auction is a subsidiary of GE Capital Auto Auctions.

AUCTION BRIEFS

CHARLES THOMAS

Prep center opens

Omaha Auto Auction has opened a $1.5 million vehicle reconditioning center that can recondition up to 1,200 vehicles per week.

Staffed by 40 reconditioning specialists, the 35,000-square-foot facility is on the auction's 47 acres in Omaha, Neb.

The facility can recondition up to 150 vehicles per eight-hour shift and can complete body work on about 240 vehicles a week.

"Omaha Auto Auction has been one of the most efficient and profitable auctions in our system," said Michael J. Richardson, president and chief executive officer of Anglo American Auto Auctions.

The auction, one of 21 owned by the company in the United States, has five lanes and 47 acres of blacktop storage space for vehicles.

Record truck sale

Anglo American Truck Auctions' Atlanta subsidiary, Southern States Vehicle Auction, had a record sale in February selling 212 of 302 trucks consigned, or 71 percent, for a total of $1.2 million.

The consignment, sales percentage and value of trucks sold were all records for Southern States Vehicle Auction.

"Trucks are in short supply in the South and demand is heavy," said Carl Miskotten, president of truck services for Indiana-based Anglo American Truck Auctions.

Included in the record sale were 80 Ford U-Haul trucks; 40 beverage-carrying Ford, Chevrolet, GMC and International trucks from the Coca-Cola fleet; 44 GMC Brigadiers; 27 new Chevrolet Tiltmasters that were untitled 1987 models, and a wide variety of dealer-consigned trucks and trailers.

Sales reach peak

Minneapolis Auto Auction, a GE Capital Auto Auction, set a volume record by selling more than 10,000 vehicles for Chrysler Motors in 1988.

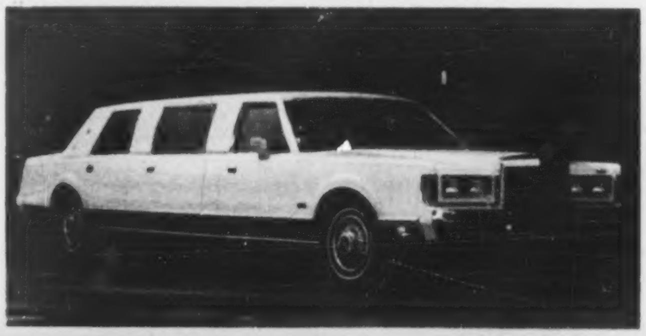
Bill Rambow, assistant general manager of the auction, attributed the increase to a strong joint marketing effort by the auction and Chrysler.

"Both groups worked very hard. It was a consistent effort throughout the year," he said. "One of our goals was to increase dealer attendance and unit sales."

Wayne Snyder, used-vehicle sales and marketing manager for Chrysler, said the number of Chrysler dealers supporting closed dealer auctions is growing.

Only franchised Chrysler dealers are permitted to buy cars at closed auctions. The cars are program vehicles from rental companies and executive vehicles.

GE Capital Auto Auctions, based in Barrington, Ill., operates 18 auto auctions nationally.



64-inch stretch
American Custom Coachworks, Beverly Hills, Calif., has unveiled a 64-inch stretch of the 1989 Lincoln Town Car. Approximately 250 will be built. The five-door conversion retails for $64,000; the regular Town Car starts at $25,562.

DEALERS

FROM PAGE 1

try that the annual spring rebound — which traditionally begins in mid-March — "just is not happening" this year.

An NADA study showed that the average pre-tax profit for an import dealership in 1988 was 1.6 percent of dollar sales, the same as for domestic dealerships, but below the average import store pre-tax profit of 2.2 percent in 1987.

Pre-tax profits for domestic dealerships dropped slightly to 1.6 percent of sales in 1988 compared with 1.7 percent of sales in 1987, according to the NADA study.

Import franchises in the NADA study were Honda, Toyota, Nissan, Mazda, Mercedes-Benz and Volvo. Domestic lines were Ford Motor Co. (Ford Division and Lincoln-Mercury combined), Chrysler Motors (Chrysler-Plymouth and Dodge combined), Buick, Cadillac, Chevrolet, Oldsmobile and Pontiac.

Jeep-Eagle was not included in the Chrysler Motors report.

Total dealership pre-tax profits — all makes — totaled $4.7 billion in 1988, down from $5.0 billion in 1987. The decline in total dealership profits occurred despite a 4 percent increase in the number of vehicles sold and a 9 percent increase in total dollar sales.

Total dollar sales reached a record $293.1 billion in 1988.

Dealership profits in 1988 were hurt by lower new-vehicle profits and higher expenses. Import-make dealerships were hit the hardest in 1988 as they experienced sharp price increases from their manufacturers, lower demand for luxury vehicles and a rise in floorplanning expenses, especially among European luxury-make dealerships. Kelderman said European-make dealerships reported the highest increase in floorplanning costs because dealers were not moving the higher-priced cars as quickly as in the past.

Both Japanese- and European-make dealerships relied heavily on income from their service and parts business in 1988. NADA said the parts and service departments contributed 67 percent of the total pre-tax profits for Japanese-make dealerships and 97 percent of the profits for all European-make dealerships. That compares with 11 percent of total profits from parts and service for domestic dealerships.

On the sales side, domestic dealerships as a whole received 61 percent of their pre-tax profits from their new-vehicle sales compared with 6 percent for Japanese-make dealerships and losses for European make dealerships. Kelderman said European-make dealerships suffered greater sales declines than Japanese-make dealerships on a percentage basis.

The remainder of the profits were from used-car sales.

Honda dealers reported an average pre-tax profit of 2.3 percent of sales — the highest for any franchise in the survey — compared with 2.7 percent in 1987.

Among the domestics, Ford Division and Lincoln-Mercury dealers recorded the highest average pre-tax profit as a percentage of sales — 2 percent of sales.

Cadillac and Buick dealers both reported average pre-tax profit margins of 1.1 percent in 1987 and 1988. Pontiac was the only GM franchise to see a decline in average dealership profits: 1.4 percent of sales in 1988, down from 1.7 percent in 1987.

"I'm not going to risk losing a potential repeat customer by selling him a cheap bedliner."

"LRV-Easco makes sure I'm satisfied and I have satisfied truck customers." A guy, a gal, whoever, comes in here and spends ten to fifteen thousand on a new pickup. First I tell them, 'Now make sure you've got a decent trade-in in a couple of years. Put in a bedliner now.'

"Then I point out that if I can install a Line-A-Bed,® ProTecta® Liner or Rubber Queen® Bedliner for them now, it costs just pennies a day because I figure it into the loan. If they go down the street, that's a couple hundred bucks in one shot. I'll even have it installed for them before they take delivery.

"I make sure it's always a Line-A-Bed, ProTecta Liner or Rubber Queen Bedliner. Why? Quality! Satisfied customers that I can give a better trade-in later because they've gotten premium pickup bed protection. I know I'll have a minimum of problems. And I know they'll be back. Sure, maybe not for a few years. But they will be back. And they'll send their friends by too.

"Why should I risk another potential ten to fifteen grand sale on a cheap bedliner? ... I can't think of one good reason, either."

LRV-Easco has a lot to offer you as a dealer. Find out more about Line-A-Bed, ProTecta Liner or Rubber Queen Bedliners. Call us today! 800-356-0712 Outside Ohio. 800-356-0715 Ohio only. Or (419) 738-8536.

Output rises in another 4-day week

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers scheduled production of 132,420 units last week, 3.86 percent more than the previous week's 127,502 and 4.50 percent more than the year-ago week's 126,723.

All three were four-day weeks. Production was affected by the shutdowns for Good Friday and Martin Luther King Jr. Day.

So far this year, 1,905,785 cars have been assembled, 14.04 percent more than the 1,671,175 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 46.41 percent; Ford Motor Co., 25.37 percent; Chrysler Motors, 12.69 percent; Honda of America Manufacturing, 5.85 percent; New United Motor Manufacturing Inc., 3.02 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.81 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.59 percent; Toyota Motor Manufacturing U.S.A., 1.46 percent; and Diamond-Star Motors, 0.80 percent.

Truck production was slated at 74,132 units last week, 2.16 percent more than the prior week's 72,562 and 10.46 percent more than the year-ago week's 67,113.

Year-to-date, 1,157,110 trucks have been built, 7.03 percent more than the 1,081,081 assembled last year at this time.

Toyota announced that it has reached full production of 400 cars a day on the first shift at its plant in Georgetown, Ky.

GM's Linden, N.J., plant was closed last week for inventory adjustment. The plant was expected to reopen today.

As reported earlier, GM's Janesville, Wis., truck plant is idle until late July for model changeover. About 1,000 workers are laid off.

Overtime was slated last Saturday at GM's Lordstown, Ohio; Arlington, Texas; and Oklahoma City plants.

Chrysler scheduled overtime last Saturday at Newark, Del.; St. Louis (No. 2) and Toledo, Ohio.

Ford scheduled overtime last Saturday at its Lorain, Ohio; Wixom, Mich.; and Twin Cities, Mo., plants.

Full week hikes Canadian totals

Canadian automakers planned to build 21,312 units last week, 24.28 percent more than the previous week's 17,148 but 1.42 percent below the year-ago week's 21,619.

Production in the previous week and the year-ago week was affected by the Good Friday holiday.

So far this year, 254,397 cars have been assembled, 11.33 percent below the 286,896 produced last year at this point.

Truckmakers targeted 21,057 units last week, 32.20 percent more than the prior week's 15,928 and 38.42 percent more than the year-ago week's 15,212.

Year-to-date, 261,742 trucks have been assembled, 6.54 percent more than the 245,679 built last year at this time.

Subaru upheld on franchising

Race not issue, Fla. court says

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A Florida used-car dealer lost his bid for a Subaru franchise after failing to convince a Dade County Circuit Court judge to restrain Subaru from giving the franchise to someone else.

Don Lloyd, owner of Don L Motors, had charged that Subaru of America denied him a franchise because his business is in a predominantly black area of Miami.

"The judge said race played no role in our cancellation of the franchise," said Philip Lustbader, Subaru of America group vice president and general counsel.

Circuit Judge Gerald Wetherington ruled last week that Subaru had the right to cancel its letter of intent with Lloyd because he failed to fully disclose that he was investigated by U.S. Customs for importing gray-market cars.

Subaru had maintained all along that it canceled the franchise because of the criminal investigation by Customs. The investigation is over and no charges have been filed against him so far, the dealer said. He said he had informed Subaru of the investigation.

Wetherington had separated Lloyd's suit against Subaru into three parts — redlining, breach of contract and negligence.

Last week's arguments centered on whether Subaru should sign a dealership agreement with Lloyd. He sought an injunction restraining Subaru from giving the franchise to someone else.

According to Subaru's Lustbader, the ruling also nullifies the negligence charge.

Arlene Muenz, Lloyd's attorney, said the court will be asked to rehear the case on procedural grounds. The judge must deny a rehearing before it can be appealed to the Florida appellate court.

Meanwhile, both Subaru Credit Corp. and Marine Midland Automotive Financial Corp. — also named in Lloyd's suit — have asked for dismissal of the redlining charge. Marine Midland is a partner with Subaru in Subaru Credit Corp., the importer's captive finance company.

Lloyd said he will probably drop the redlining charge unless a civil rights group comes forward to pursue it.

Whether Lloyd can prevail on his redlining charge on his own is doubtful because none of his customers were actually denied credit by Subaru Credit or Marine Midland. Lloyd is white.

Lloyd's redlining charge was rooted in the location of his dealership, in a 78 percent black area of Miami.

"The whole race issue was subterfuge," said Subaru's Lustbader.

Lutz, left, and Bidwell announce Chrysler's new incentive program

Dealers reduce build-out orders

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — While automakers continue to express optimism that bold incentive campaigns will resuscitate a sagging market, domestic-car dealers throughout the country report they are reducing 1989 model year build-out orders due in late April and early May.

If the trend continues, domestic automakers will face production cuts or extended model changeovers this summer as their aggressive production schedules collide with mounting dealer wariness that the market cannot rebound to 1988 levels.

Big 3 dealers interviewed by Automotive News said that despite the latest round of incentives, they are not ordering as many build-out units as they did one year ago.

Chrysler Motors last week became the third Detroit automaker to offer aggressive, wide-ranging incentives. It began offering 24-month loans at zero interest for all new 1988- and 1989-model cars and selected trucks. Chrysler also sweetened rebates and offered additional low-interest loan rates in response to the programs announced at the end of March by General Motors and Ford Motor Co.

Changes slow GM's F

Camaro/Firebird may be delayed until '93

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' next-generation Pontiac Firebird and Chevrolet Camaro — now scheduled for introduction as 1992½ models — may actually end up 1993 models because of last-minute changes in the program.

Economic considerations and new technologies have sent GM engineers and designers back to the drawing boards, sources familiar with the project said.

Meanwhile, the current generation Firebird/Camaro will be freshened up in the spring of 1990, though the changes are minor, and labeled 1991 models.

The next-generation Firebird and Camaro, planned for a 1992½ or 1993 launch, will be rear-wheel-drive cars, just like today's models. But they will be built on a space-frame chassis, a bird-cage like structure to which body panels are attached. Originally, all of the body panels were to be composite plastics, but now GM is considering a combination of plastic and steel panels because of costs. Those decisions will be made within a couple of months.

Also to be decided in that time-frame are details of the engines for the new Firebird and Camaro. The current base engine in the Firebird and Camaro is a 2.8-liter V-6 with multi-port fuel injection. The base engine in the next generation will be an upgraded version of the same engine. It will feature new technology and likely will have a larger displacement.

The Series 3400 engine, GM's new dual-overhead cam, 3.4-liter, high-performance V-6 has been ruled out.

The high-performance versions of Firebird and Camaro will be powered by a V-8. An all-new V-8 is being considered to replace the 5-liter V-8 in today's F-cars, as they are known within GM.

The new V-8 slated for the Fire-

Reaching high

Truck industry on road to powerful 1989

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ORLANDO, Fla. — As medium- and heavy-truck dealers gather for TRX-89, the 26th annual American Truck Dealers convention and exposition, their financial health and the industry's market outlook are the best they have been in years.

In most dealerships, sales and profits are up strongly, according to ATD's most recent 20 Group surveys. ATD is a division of the National Automobile Dealers Association.

At the same time, medium- and heavy-truck manufacturers have been producing at full capacity. In contrast to plant shutdowns and capacity cutbacks of recent years, a number of companies — Kenworth Truck Co., Volvo GM Heavy Truck Corp. and Freightliner Corp. — are adding facilities.

Industry forecasters are looking for 1989 to emulate last year, which was the best in a decade. Some feel 1990 will bring record sales. In the short and long terms, however, there are still worrisome clouds on the horizon.

Rising interest rates, for example, could take their toll on sales. And 1991 emission standards promise to drive prices up sharply, with a potentially big impact on sales.

But for the time being, the industry is enjoying some welcome prosperity.

"I haven't been as optimistic as far as the dealers are concerned for some time," said Bob Young, manager of ATD Consulting Services, McLean, Va.

He pointed to a "lot of good stuff" in the average truck dealer's financial results last year, as represented by ATD's 20 Groups. The 20 Groups — which organize about 20 dealers with similarly sized dealerships and products into regular meetings to discuss all facets of their business — include more than 200 medium- and heavy-truck dealers.

The data indicate dealers are doing a somewhat better job of managing their businesses. Their unit sales have increased, but the real key to their improved before-tax profits is in management — particularly in used-truck operations.

The medium- and heavy-truck dealers' average monthly pre-tax profit as a percent of sales was 2.2 percent in 1988, up from 1.8 percent the previous year. By comparison, car dealers averaged 1.6 percent in 1988 and 1.9 percent in 1987, according to NADA.

Toyota U.S. elevates 8 to VP posts

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Toyota Motor Sales U.S.A. promoted eight managers to vice president in what was described as a "youth movement" to prepare for future growth.

"Our goal by the mid-1990s is to sell 1.5 million vehicles in the United States," said Robert B. McCurry, Toyota's executive vice president of sales and operations. "To do that, we have to have more senior people."

While Toyota referred to the changes as a reorganization, few duties or reporting relationships changed.

An exception is George Borst, 40, the youngest of the new vice presidents. He was promoted from corporate marketing manager to vice president of marketing and strategic planning. His new duties include strategic planning and product planning in addition to marketing, merchandising, advertising and sales training.

Borst

Illingworth

Olson

Pitts

Other promotions include: J. Davis Illingworth, 45, vice president and general manager of Lexus Division, from general manager; James R. Olson, 47, vice president of public affairs, from corporate public affairs manager; and Robert Pitts, 41, vice president and gen-

Show stopper
This Cadillac Seville Ultra, developed by the General Motors Advanced Concept Center in California, was designed as a "what if . . ." project car to explore the outer regions of Cadillac performance. Unveiled at the 1989 Arizona Auto Show last week, the Seville Ultra sports a 275-horsepower, 4.5-liter engine built by Jack Rousch Racing that is said to be capable of propelling the car to speeds up to 150 mph. A Cadillac spokesman said there is no plan to put this car in production.

Ford gives nod to Gilmour; Ross, Trotman to new jobs

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. will shuffle three key executives in a series of moves to be announced today.

Ford is expected to reveal in its annual proxy statement that Allan D. Gilmour, 54, will become executive vice president of corporate staffs. In addition, Gilmour — whom many observers believe is destined to head Ford someday — will return to the four-man office of the chief executive after an 18-month absence.

Louis R. Ross, 57, will replace Gilmour as executive vice president in charge of international operations. Ross will be succeeded by Alexander J. Trotman, 55.

The changes, which have been approved by Ford's board of directors, take effect May 1.

Gilmour will assume a title that has not been used for nearly a decade. Vice Chairman Harold Poling was executive vice president of operating staffs in 1979, before he was put in charge of North American Automotive Operations. What Gilmour's duties will be is unclear.

The vacancy in the office of chief executive was created by the April 1 retirement of William Clay Ford.

Gilmour had served in that office as Ford's chief financial officer until October 1987, when he was named head of international automotive operations. Although the move was a step down on paper, it gave Gilmour an opportunity to run an automotive operation and experience on the international scene. Both are viewed as essential rungs on the ladder to the top.

Poling is due to retire in 1990; Chairman Donald Petersen turns 65 in 1991.

Ross, in a lateral move, takes over on the international side after more than four years as head of NAAO. He oversaw the launch of the Ford Taurus/Mercury Sable as well as some significant gains in market share in North America.

Gilmour

Ross will continue to report to Philip E. Benton Jr., 60, president of the Ford Automotive Group.

Trotman's ascension will give him his fourth job in 14 months. Early last year he was promoted from president of Ford of Europe to chairman. On Feb. 1, 1989, he moved to the United States as an executive vice president, reporting to Ross.

Although the arrangement was not without precedent, it was peculiar. It appears to have been a vehicle to get Trotman reacquainted with the North American market.

Iacocca takes cut

Compensation fell below $4 million

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. Chairman Lee Iacocca, who took home $17.9 million in compensation in 1987, received compensation totaling $3.66 million in 1988.

In 1988, Iacocca exercised stock options valued at less than $2.03 million compared to the $13.45 million in options he exercized in 1987, according to the company's proxy statement mailed to shareholders on Friday.

General Motors and Ford Motor Co. are expected to release proxy statements this week.

Chrysler Motors Chairman Bennett Bidwell was the only other executive to exercise warrants among the five highest-paid Chrysler employees. As a result, the compensation of Chrysler's top-five executives dropped sharply in 1988.

Iacocca's other 1988 compensation included a salary of $865,673, a $600,000 cash bonus, a $159,254 stock bonus and a $12,000 company contribution to the employee savings plan.

Iacocca's compensation reached a high of $20.6 million in 1986 and totaled $17.9 in 1987. He was the highest-paid automotive executive both years.

Iacocca's compensation in recent years has been a red flag to UAW officials, which again criticized it this year.

According to the proxy, the Chrysler chairman will receive an additional 191,250 shares of common stock Nov. 2, 1990, and 63,750 shares Dec. 8, 1991. He also has an option to purchase 540,000 shares exercisable Dec. 8, 1990 and 180,000 shares exercisable Dec. 8, 1991 at $33.50 per share.

According to the proxy, the five top Chrysler executives received the following 1988 compensation:

- Gerald Greenwald, Chrysler Corp. vice chairman: total compensation of $1,207,929. In 1987, Greenwald's compensation totaled $6.60 million, including $5.28 million from exercised stock options.
- Bennett E. Bidwell, Chrysler Motors chairman: total compensation of $1,210,143, including the $159,235 realized from exercised stock options. In 1987, Bidwell's compensation totaled $2.45 million, including $1.33 million from exercised stock options.
- Robert A. Lutz, Chrysler Motors president: total compensation of $979,256. Lutz' 1987 earnings were not detailed in last year's proxy.
- R.S. Miller Jr., Chrysler Corp. executive vice president: total compensation of $902,453. His 1987 compensation was $1.27 million, when he exercised stock options totaling $377,960. Miller did not exercise any stock options in 1988.

Chrysler stockholders will vote on two proposals at the May 18 annual meeting in San Francisco. One calls for cumulative voting in the election of directors. The other would require each company director to hold at least 2,000 common or preferred Chrysler shares.

Ex-dealer to pay customers $2.1 million

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A former Maryland dealer has agreed to pay customers $2.1 million to settle consumer fraud charges brought by a county agency.

Dennis L. Spencer, who owned two dealerships in Silver Springs, agreed to the settlement with the Montgomery County office of consumer affairs. The two dealerships, Astro Chevrolet and Metro Ford, are in bankruptcy proceedings.

It is the largest consumer protection cash settlement in the state's history, county officials said.

The money collected from Spencer — who denies all charges of fraud and deception — comes from assets frozen by a court order obtained by the county. Those assets include proceeds from the sale of two Virginia dealerships owned by Spencer — S&R Chevrolet-Oldsmobile in Leesburg and Imperial Dodge-Chrysler in Warrenton.

John Koons Jr., a Washington-area megadealer, bought those points. Spencer's last Virginia dealership, M&M Pontiac in Springfield, was sold recently to David Perno.

The settlement also prohibits Spencer from owning, operating, managing or working in any dealership in Montgomery County for at least 10 years.

The consumer affairs office filed suit in September 1987 and for the first time authorized the hiring of an outside law firm to handle the complicated case. In addition to the customer payments, Spencer agreed to pay $650,000 in legal fees for the outside counsel's investigation, which was handled by the Washington law firm of Arent, Fox, Kintner, Plotkin and Kahn.

The consumer office acted on 400 consumer complaints and said it will now send letters and claim forms to 7,000 to 8,000 Spencer customers who bought cars between 1985 and 1988. The dealerships were closed in 1988. Using records seized from Spencer, the county can supplement what may be inadequate consumer records.

Payouts are expected to start by early fall. The restitution does not cover any fraud complaints on repairs or service. Any money not paid back to customers will go to the county to pay the expenses of the investigation.

Last October, a state court moved to preserve Spencer's assets and shortly afterward enjoined him from engaging in any of the allegedly deceptive practices. The Maryland dealerships then went into bankruptcy proceedings. Included in charges made of Spencer:

- Selling used cars, demonstrators, wrecked cars or repossessed cars as new.
- Selling "dealer-installed accessories" at "unconscionable" prices even though some were factory installed and thus included in the sticker.
- Failing to disclose prices for certain items and for additional dealer markup.
- Rejecting liability for repairs despite sale of extended-warranty and service contracts.
- Offering to sell at a certain percentage over "factory invoice" but failing to have such vehicles in stock unless "dealer-installed options" also were purchased.
- Falsely advertising that buyers would "get back in trade every dollar you paid for your car when new toward the purchase of any in-stock" new car.

European makers face soft sales, new rivals in Canada

By Alex Law
STAFF CORRESPONDENT

TORONTO — Import firms competing in Canada's luxury market admit demand is soft and think it may get even softer.

The luxury market, $30,000 Canadian ($25,000) and up, accounts for about one sale out of every 20 in Canada, about half the U.S. rate.

Despite the smaller market, the number of competitors is no less and the sharply competitive nature of the Canadian market may foreshadow a shakeout south of the border. Canada's population and car sales are about one-tenth the size of that in the United States.

Import sales in Canada were down 9.5 percent in 1988. Luxury imports suffered losses ranging from 4 percent at Mercedes-Benz to 33 percent for Volvo. BMW was the sole exception in the luxury group, posting a 3 percent gain.

March sales for most in the European group are down anywhere from 10 percent for BMW to more than 37 percent for Audi. While sales held their own in the first two months of this year, first quarter results show declines ranging from 1.7 percent for BMW to about 13.5 percent for both Jaguar and Volvo.

"I don't see it (the downturn) as a disaster," said Dennis DesRosiers, president of DesRosiers Automotive Research. But the softness is "a serious concern."

Adding pressure to luxury-import sales is higher interest rates — the prime rate now stands at 13.5 percent in Canada — a weak Canadian dollar, domestic competition undercutting prices and the specter of upscale Japanese competition.

Also, recent changes in the Canadian tax structure, similar to changes in the United States, limit a car's write-off status to $20,000 ($16,760).

And the launch of Toyota's Lexus and Nissan's Infiniti next year could make things even tighter for Europeans.

"Everything I see says we're going after BMW and Mercedes," said F. David Stone, Toyota Canada's director of public affairs. He figures Lexus might develop another niche: "A high-quality product at a better price."

As a percentage of total sales, several long-standing factors have kept the imported luxury-car segment below that in the United States. That is because:

Mackie: "I believe consumers are poised to re-enter the luxury car sector"

- Imported cars are subject to a 9.2 percent duty and a 10.71 percent sales tax.
- Provincial taxes generally are higher than taxes in the United States, leaving less disposable income.
- Canadians, among the world's biggest savers per capita, are not inclined to spend money on luxury cars.

Most manufacturers are reigning in their operations and holding fast or reducing the number of dealers in an effort to ride out the storm.

The major exception is BMW, which just boosted its dealer network to 48, up from 41 points in 1987. The company hopes to double its 1988 sales pace and sell more than 10,000 units.

CANADIAN LUXURY MARKET

March Sales

	1989	1988	% Change
Audi	129	207	−37.7
BMW	401	450	−10.8
Jaguar	151	190	−20.5
Mercedes-Benz	345	433	−20.3
Porsche	90	66	+36.0
Saab	116	161	−27.9
Volvo	565	510	+ 8.8

Vic Doolan, president of BMW Canada, has led the move to increase sales. He has brought more dealers on board, opened a BMW gallery in the heart of Toronto's business-financial district, and unveiled new leasing programs.

Other luxury importers imply that BMW's strategy for a growing dealer network is the wrong way to go.

"That's a Band-Aid solution to a problem you have. In the long term it'll haunt you," said Dieter Scharf, general manager of marketing, planning and services for Mercedes-Benz Canada. "We don't believe in just opening new dealers."

While Mercedes is making no changes, others are paring back their dealer networks. Audi is in the final stages of a dealer-trimming program (from 92 to 60) that left some ex-Audi dealers unhappy.

Audi sales in 1988 were about 2,500 units, down from 7,000 in 1986.

Max Finestone, manager of Volkswagen Canada's Audi division, characterizes that performance as "not too bad, but not great."

VW Canada calls the 1986 performance an aberration.

"The boom of the early 1980s cannot and should not be used as an accurate barometer for our present policies and market strategies," said then VW Canada President Detlef Witting during the marque's new model launch last August. Wittig has since replaced Hans-Jorg Hungerland, now president of Volkswagen of America, as VW AG's export manager.

He said Audi is "not a 10,000- or even a 6,000-car Canadian franchise, nor should it be. More appropriately, more correctly, Audi will strive toward stable new-car sales of between 4,000 and 5,000 per year."

Fred Dubee, general manager of VW Canada's Porsche division, said his division's sales "will be up in 1989," to about 700 units, but still off from the "heady volume days with the 924" in 1986 when the company told 1,200 units.

Barratt: Volvo sales are increasing due to "better availability of product"

Last year, VW Canada sold 630 Porsche cars, down from 918 the year earlier.

"The luxury sports car market had a rough last 12 to 16 months," he said.

Porsche has 16 dealers in Canada. Originally, all 315 Canadian VW dealers sold and serviced Porsche models, but that number was "rationalized to 16 several years ago," Dubee said.

In recent years, Jaguar Canada has seen double-digit sales increases through its 23 dealers. That ended last year for the Brampton, Ontario-based importer.

Instead of the 3,000 units projected, the reality was 2,154, down 19 percent from 1987's record 2,660. Still, it was Jaguar Canada's second best year.

Company President John Mackie said that in Canada, "the political uncertainty of an election year, combined with the economic anxiety caused by the debate over free trade with the United States, seemed to have a numbing effect on consumer confidence.

"I believe consumers are poised to re-enter the luxury car sector," he said.

Jaguar has been especially hard hit by federal tax changes that limit the write-off for a company car, since 30 percent of existing Jaguars have company-car status.

Volvo Canada sales have been off, but Ken Barratt, the company's public affairs director, said sales by the company's 68 dealers are increasing.

He attributed that to "better availability of product" now that the company's Halifax assembly plant is turning out 36 units a day of the 740-series.

Saab-Scania Canada is struggling in its long-term goal to sell 3,000 units a year. Last year Saab sold 1,369 cars.

"Saab is unknown to people," said Ulf Bundell, the firm's president. He said studies show that Saab's competition is "five to six times better known."

The 32 Saab dealers are selling a greater number of 900-series models than the 9000-series, but Bundell would like to see the breakdown change in favor of the more expensive series. The immediate sales goal for Saab in 1989 is 1,800 cars, Bundell said.

Meanwhile, a Canadian distributor handling Maserati recently entered the market, hoping to sell about 500 cars a year. Autolion Distribution is setting up 30 dealers across Canada to sell the Peugeot 405. There also is talk that Sterling may be sold in Canada.

But the big question is the impact of the Japanese luxury divisions that launch their cars in the fall of 1990.

European importers vary on how direct the Japanese competition will be.

BMW's Doolan says his cars — particularly the 5- and 7-series — will not be at much risk from the less expensive Japanese luxury cars. He believes consumers will not put BMWs and the Japanese cars on the same plateau.

Wayne Jefferey, general manager of Toyota Canada's Lexus division and an ex-BMW executive, believes the Europeans will lose sales to Lexus. His first target group, however, are buyers moving upscale from the Toyota Cressida to European models.

His second target group is domestic luxury car owners. The third is European car owners. He admits the latter group are less likely to cross over.

Other car company spokesmen admit to concern over Lexus and Infiniti. Audi's Finestone said, "We'll be competitively priced, plus we'll have our warranty. We're worried but not terrified."

John Arnone, Jaguar's director of public affairs, said "with all due respect, they're green. It'll take them a long time to settle in and by then we'll have new product."

Canada car sales dip

Feb. sales slip 6% but trucks rise 5%

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canadian sales of domestic and imported cars slipped again in February, but the 6.4 percent drop was not as high as the 8.6 percent decline in January. Trucks sales, however, increased 4.6 percent.

Domestic cars led the slide, dropping 8.94 percent, while imports stayed virtually even, logging 21,709 sales compared with 21,945 in February 1988. There was one less selling day in February versus the year-earlier month.

"Sales are holding up reasonably well despite the growing concern with regard to higher borrowing costs," said William Atkinson, GM of Canada's vice president, sales, service and marketing. "We are hopeful that the inflationary pressures will soon ease and interest rates will begin to fall."

Ford suffered the most of the domestic makers, both on a percentage and unit basis. The company's car sales were down 19.71 percent from a year ago.

Udo Kaul, Ford of Canada's vice president, general sales, said the steep decline was attributed to unusually high sales a year earlier.

"Car sales are down mainly because of the contrast with high Tempo and Topaz catchup sales recorded last year after a three-month plant shutdown," he said. Comparing last month's result "to those inflated sales numbers accounts for 13 of our 19 percentage point decline."

In other segments, "Ford did very well. Escort sales were up 19.9 percent. Thunderbird and Cougar sales were up 21.1 percent, and before we've even officially introduced it, we've (taken orders for) nearly a quarter of available Festiva minicars," Kaul said.

While car sales slipped, light trucks were up, a segment showing continuing strength.

Imports led the monthly gain, rising 37.24 percent, strongly paced by Mazda and its new MPV. Mazda's sales jumped 115 percent to 1,459 units in February, up from 678 a year earlier.

Domestic truck sales held about even at 28,646, compared with 28,490 a year earlier.

Chrysler's light truck, van and Jeep sales increased 6.5 percent. In spite of having five major competitors (GM, Ford, Mazda, Nissan and Toyota), Chrysler's minivan continues to command close to 60 percent of that segment.

Ford managed to post a small gain of 387 units, due to strong Aerostar sales, especially the long wheelbase version. GM's light-truck sales slipped 6.32 percent.

Overall, domestic and imported truck sales posted a combined sales gain of 4.59 percent for the month and 3.34 percent year-to-date.

Total vehicle sales are down 2.95 percent for the month and 3.96 percent year-to-date.

LEGAL BRIEFS

Service contract buyers sue National Warranty

A class action filed in a North Carolina state court seeks refunds for thousands who bought extended warranty coverage on used cars from National Warranty Corp.

In 1985 and 1986, some 30,000 persons paid a total of $7 million for National Warranty Corp. policies designed to cover repairs for up to five years. The company operated in North Carolina, South Carolina, Virginia, West Virginia, Georgia, Alabama and Texas.

The lawsuit was filed by the law firm of Moore and Brown, which has offices in Washington and Winston-Salem, N.C. It seeks unspecified compensatory and punitive damages, charging breach of contract, breach of "service contract" as defined in the 1974 Magnuson-Moss Warranty Act, unfair and deceptive trade practices and fraud.

The suit charges that in September 1986, the company, based in Kinston, N.C., canceled the service contracts without making refunds for the time remaining on the agreements and without reimbursing many policyholders for repairs made before cancellation.

National Warranty had told dealers they would be free of liability because either it or its underwriter, Interstate Casualty Insurance Co., would cover the repairs.

Interstate and its owner, William C. Shackelford, who also owns National, are also named in the suit.

In 1986, North Carolina's insurance department warned National Warranty that because it was not licensed to sell insurance, its service contracts may have violated state law.

The suit charges that instead of obtaining the necessary licenses and putting up reserves to cover potential liability, Shackelford changed the contracts to make dealers liable for the repairs if National Warranty did not pay valid claims. The suit said new dealer contract sales then fell off sharply.

In August and September 1986, according to the suit, National Warranty, referring only to "underwriter request," canceled all policies and gave only a few refunds. The suit charges Shackelford with preventing National Warranty from getting any funds from Interstate to pay for refunds.

After receiving hundreds of consumer complaints about policy cancellations, the state moved against National Warranty and obtained an agreement from the company last February whereby National will pay the state $122,429 for all remaining consumer claims.

That agreement covers only 2,000 persons who complained to the state, the suit said. It added that 10,000 to 20,000 others, including purchasers, dealers and repair shops, may be eligible for refunds.

Alabama dealer fights $225,000 fraud award

A jury has awarded $224,000 in punitive damages and $1,000 in compensatory damages to a customer in a fraud case brought against Sunbelt Chrysler-Plymouth in Mobile, Ala.

Vincent F. Kilborn, an attorney for the dealership owned by Allen Holzhauer, said two post-trial motions have been filed, one seeking a new trial and the other to reduce damages. If both are rejected, an appeal is planned, he said.

The customer, Roosevelt Davis, entered an agreement to buy a 1987 Dodge B-250 van for almost $30,000 if Davis could get the loan approved by his credit union. Davis' trade-in was valued at $1,000. The credit union refused financing, and Davis said the dealer would not tear up the retail contract and cancel Davis' order. Davis sued for fraud and converting his trade-in as a dealer sale.

Holzhauer said Davis first accepted the van, which the dealer had financed through a bank, but then turned down the deal.

Kilborn, the dealer's attorney, said the verdict — with punitive damages 224 times the compensatory damages — is a record for Alabama.

Judge refuses GM plea on second collision

A Florida appellate judge has refused a motion by General Motors to dismiss a suit charging that a 1985 Corvette was defective because it did not have air bags or restraints to protect its occupant in a secondary collision.

GM argued there is no cause of action under Florida law for failure to install air bags and that the federal government's 1966 vehicle safety law pre-empts such action.

Palm Beach Circuit Judge Jack H. Cook disagreed, siding with the plaintiff, Betty E. Seemann, who was wearing the car's seat belt during the accident.

"As plaintiff notes, she is not claiming that General Motors was negligent because it chose to equip the Corvette with a seat-belt restraint system as opposed to an air-bag restraint system," Cook said in his opinion.

"Rather, she is alleging that the vehicle as equipped is designed defectively because it did not impose some restraint system that would protect her from the secondary collision." He found those charges sufficient for a cause of action under Florida law.

Cook also said that the law states that compliance with a federal safety standard "does not exempt any person from liability under common law."

Court says lemon owner can recover loan fees

A U.S. District Court judge has ruled that finance charges are recoverable under Pennsylvania's lemon law.

General Motors brought the case to clarify the state law after a consumer, who won an arbitration case, sought reimbursement of finance charges.

GM said the Pennsylvania law does not specifically mention finance charges, and those charges, unlike lien fees, sales tax, license and document fees, are not part of the "collateral" fees related to the purchase of the car.

GM said finance charges are separated from "collateral charges" in the lemon laws of Connecticut, Kentucky, Ohio and North Carolina, whereas in Virginia and Florida collateral charges specifically include finance charges.

U.S. District Judge Charles R. Weiner ruled that by not defining "collateral charges," Pennsylvania meant to construe the phrase "liberally as to allow the innocent purchaser to recover all possible charges."

Weiner said there were two earlier opinions by the federal District Court for the eastern district of Pennsylvania that said finance charges are recoverable under the state's lemon law.

ATD

FROM PAGE 1

The truck dealers in ATD's 20 Groups averaged $33,400 a month in profit before taxes, based on the 2.2 percent rate of return and average sales of $1,518,200 a month. Dealers' average monthly gross profit rose to $216,500 from $188,600 in 1987. Their average monthly expenses also rose to $190,900 from $178,800 in 1987, reflecting increased business.

Expenses as a percent of sales rose to 13.6 percent from 13.1 percent in 1987. However, expenses as a percent of gross profit dropped to 93.8 percent from 94.8 percent in 1987. That is a particularly positive indicator because gross profit went up while the percent of the gross to cover expenses declined.

Dealers' parts, labor and warranty sales declined 1.79 percent in 1988 to an average of $390,000 a month compared to $397,000 in 1987.

Their warranty receivables from factories for labor and parts were up sharply — another indication that they did more warranty business.

Warranty receivables as a percent of warranty sales increased to 304.1 percent from 282.1 percent in 1987. That means for every $100 in warranty work a dealer did, he carried on his books $304.10 owed by the factories.

"That number is terrible," Young said, calling it both a major and a complex industry problem for which both the factories and dealers share some of the blame.

The problem is chiefly due to extra administrative costs that have been imposed on dealers by the new super warranties, along with slow payments by factories and, in some instances, dealers being required to install parts without a markup, Young said. Super warranties include components that used to be warrantied for 100,000 miles, for example, and now have 500,000-mile coverage.

TRUCK DEALERS' PROFITS CLIMB

SOURCE: American Truck Dealers division, NADA

*Does not include cost of goods sold

Dealers' gross profit on new-truck sales increased to 6.2 percent from 5.7 percent in 1987. Young didn't consider the 1988 number very good, but called it a "move in the right direction."

Dealers averaged $153,000 a month in used-truck sales, compared to $133,300 in 1987. Their gross profit as a percent of such sales increased to 7.9 percent from 6.8 percent in 1987.

Meanwhile, heavy-truck manufacturers are generally looking for U.S. sales this year to be equal to or slightly below calendar 1988's total of 148,361.

In the medium-duty Classes 4-7 market, where General Motors, Ford Motor Co. and Navistar International Corp. account for about 90 percent of the sales, manufacturers are looking for U.S. sales to stay roughly in the same, 186,000-unit, range as last year.

Forecasts for U.S. heavy-truck sales range from a low of 137,000 Class 8 trucks by Freightliner to a medium-range forecast of 142,000 by Navistar to a bullish 149,000 projected by Volvo GM Heavy Truck.

Supplier Eaton Corp. is probably the most bullish about future sales, though. It is projecting 1989 North American factory sales of 175,000 to 180,000 heavy trucks — roughly comparable to 1988's 177,000. Factory sales to dealers for the heavy-truck market are very close, if not identical to, retail sales since heavy trucks are generally built to order.

Eaton expects North American Class 8 sales to be in the 205,000 to 210,000 range by 1993, based on its perception of how the market has adjusted to deregulation and replacement cycles.

Honda U.S. stock split part of world strategy

By Marcia Parker
CRAIN NEWS SERVICE

Honda Motor Co.'s recent five-for-one split of its American Depositary Receipt shares traded on the New York Stock Exchange is part of a larger attempt to rely less on cash flow for investment and more on global capital markets.

After purposely avoiding capital markets in recent years, Honda in March raised more than $700 million in the Euromarket. On April 3, it split its ADRs to make their trading price more attractive to U.S. investors.

Honda is striving to diversify its investor base, especially in the United States and Europe. About 8 percent of Honda is owned by foreign investors, including U.S. investors. This is on the high side for a Japanese company. The majority of its investors are Japanese financial institutions and corporations.

Foreign investors will be the key buyers of the bonds Honda issued in Europe to finance expansion of Japanese production facilities. The automobile manufacturer issued in the United Kingdom $500 million worth of bonds with warrants to subscribe for shares of common stock. Honda also issued in the Netherlands about $200 million worth of bonds with warrants.

In the past, Honda executives have been reluctant to float debt to finance capital projects, preferring to use cash, according to Fumihiko Ike, assistant to the senior vice president of Honda North America. Honda hasn't been in the market since 1985.

Honda, however, has made raising its profile in the global financial community a key objective, which is one catalyst for the new debt financings.

While the weak dollar and fierce competition among the world's automakers have put pressure on Honda, the company was able to boost sales and net income in calendar 1988.

Benjamin Moyer, who follows Honda for Merrill Lynch Capital markets, said in a report last month that because of its high dependence on North America, Honda should have been hit more than other Japanese automakers by the yen's rise. But he said profitability was sustained on volume growth, cost cuts, mix improvement and price hikes.

Honda is concentrating on expanding production in Japan, as well as the United States, Canada and Mexico.

The company is not planning to make big investments in Europe because it fears that when a unified European market is created in 1992, the barriers to foreigners will be high, said Wendy Beale, an auto analyst for Smith Barney, Harris Upham & Co., in a recent report.

Beale projects a 23 percent rise in operating income in the fiscal fourth quarter ended March 31, but expects ADR earnings to fall sharply because huge currency gains boosted year-earlier earnings per share. However, non-operating items should be less of a factor in fiscal 1990 and ADR earnings growth should be 10.1 percent, she said.

She said Honda, which is selling at 16.7 times Smith Barney's fiscal 1990 estimate, is a cheap stock by Japanese standards but an expensive one by U.S. levels, which might keep some U.S. investors at bay. It is selling at 47 percent premium to the Standard & Poor's 500 Stock Index, which Beale said fairly reflects the company's earnings prospects, but it also is dependent on the vagaries of both the yen and the Nikkei 225 stock exchange.

The April 3 change in Honda's basis of issuance of its ADRs to two common shares per ADR from 10 common shares was the second split since it first issued ADRs in 1962.

Prior to the split, the 52-week high and low for Honda's ADRs was $187.75 and $124.50, respectively. The ADR traded for $146.75 on March 31. Following the split, the ADR closed at $29.875 on April 3 and $30.25 on April 4.

Turbo long-wheelbase minivan debuts at Chrysler St. Louis plant

HIGHLAND PARK, Mich. — Chrysler Motors began production April 3 of its first turbo-powered long-wheelbase minivan at its St. Louis assembly plant No. 2.

Dodge Grand Caravan and Plymouth Grand Voyager LE and SE models are now available with an optional 2.5-liter turbocharged four-cylinder engine with three-speed automatic transmission. The engine-transmission package carries a discount of $510 from the manufacturer's suggested retail price.

The base price of the Dodge Grand Caravan and Plymouth Grand Voyager LE models is $16,462; the SE models are $14,526. The 3-liter V-6 with Ultradrive four-speed electronic automatic transmission is standard on those models.

The turbocharged 2.5-liter four-cylinder delivers 150 horsepower at 4,800 rpm and a net torque of 180 pounds-feet at 2,000 rpm.

Chrysler did not specify why the four-cylinder engine package is being offered. However, availability of the V-6, which is imported from Mitsubishi Motors, is limited and Chrysler has acknowledged it is correcting a design defect in the Ultradrive transmission.

Chrysler subsidiary named

WASHINGTON — Chrysler Technologies Airborne Systems is the name for a new subsidiary of Chrysler Technologies Corp. The new unit produces military aircraft products and systems.

Formation of the subsidiary was announced in January. It will be headquartered in Waco, Texas.

The new subsidiary combines military aviation functions of two Chrysler Technologies units: Gulfstream Aerospace Corp. and Electrospace Systems.

The new company will develop airborne electronic systems for both commercial and military aircraft markets. It will also modify large transport aircraft.

Chrysler Technologies is a subsidiary of Chrysler Corp.

Cars, trucks dip for March, year

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Despite incentives throughout the month, there was little wind in the sails of automotive retailing in March. Deliveries of new cars and trucks stumbled in the month and in the first quarter of the year.

New-car sales were down 11.80 percent for the month and 11.16 percent for the quarter. Sales have shown year-to-year declines in each month since November.

March sales of light trucks, domestic and foreign, eased by 9.79 percent in March and were off 7.06 percent in the quarter.

Combined car and light-truck sales totaled 1,311,664 in March, down 11.15 percent from 1,476,343 last year. For the January-March period, car-truck deliveries were 3,480,732, a decline of 9.87 percent from 3,861,848 in 1987.

Dealers handling cars built in this country saw March retail deliveries slump 12.83 percent to a total of 639,631 units compared to 733,738 a year earlier.

Sales of imported cars dipped 9.01 percent to 245,161 vs. 269,433 in March 1988.

Combined domestic and foreign car sales totaled 884,792 in March, down 11.80 percent from 1,003,171 in March 1988.

In the month's final 10-day period, sales of domestic cars fell to 272,520 units, down 18.09 percent from 332,721 a year ago.

Sales of domestic cars in the first quarter of this year were off 11.06 percent. The total of 1,702,240 compared to 1,914,022 in 1987.

Import sales in 1989's first three months were off 11.40 percent and totaled 650,417 compared to 734,107 in the initial quarter of 1988.

Combined quarterly sales of domestic and imported cars were off 11.16 percent, totaling 2,352,657 against 2,648,129 in 1988.

Year-to-year declines in domestic-car sales for March and the three months were reported by each of the Big 3 and by Honda. Toyota, Mazda and Nissan gained for both periods in sales of U.S.-built cars. Mitsubishi, which had no domestic car sales last year, reported sales of 1,831 units in March this year and 3,878 in the quarter.

Toyota's sales of U.S.-built cars in March were up 211.47 percent with deliveries of 16,078 units vs. 5,162 a year before. Camry models produced at its new Georgetown, Ky., plant sparked the surge. Nissan's deliveries of 10,374 units were up 33.27 percent, from 7,784

SALES

FROM PAGE 54

a year before and Mazda's were up 82.73 percent in the month to total 5,142 against 2,814 in March 1988.

First-quarter sales of U.S.-built cars nearly tripled for Toyota and were up 78.49 percent for Mazda and 53.73 percent for Nissan.

Sales of domestically built Honda cars eased 6.58 percent in March and 2.71 percent in the quarter.

Chrysler Motors dealers delivered 26.49 percent fewer domestic cars in the month and 22.64 percent fewer cars in the 1989 quarter. General Motors dealers delivered 14.61 percent fewer cars in the month and 15.67 percent fewer cars in the first three months of the year compared to the similar 1988 periods. Ford Motor Co. dealers' new-car deliveries were down 11.20 percent in March and 5.31 percent in the quarter.

Although 1989 sales have been generally lackluster, only Ford among the Big 3 has publicly reduced its 1989 car sales forecast.

The sizable plunge in light-duty truck sales in the United States in March reflected a steady, continued softness in the market.

Manufacturers retailed 426,872 light trucks in March, 9.79 percent fewer than in the year-earlier period. In February, truck sales were down 10.75 percent.

With sales of 1,128,075 light trucks for the first three months, 1989 trails last year by 7.06 percent.

Domestic manufacturers continued to gain market share against foreign-based firms, though the latter's market erosion appears to be leveling off.

Domestics grabbed 86.10 percent of the market in March, up from 85.84 percent a year ago.

For three months, they held 86.08 percent of the market compared to 85.48 percent in 1988.

Chevrolet accounted for all the market share gain chalked up by the domestic truck industry in March.

Chevrolet garnered 27.83 percent of the market in March, up from 25.66 percent a year earlier.

Ford's light-truck share dropped to 30.18 percent in March from 31.81 percent last year.

GMC's share dipped to 7.52 percent from 7.73 percent.

Chrysler's share held steady at 15.78 percent vs. 15.79 percent a year ago; while Jeep's share declined slightly to 4.80 percent from 4.85 percent last year.

There were few bright spots in the March truck report.

GM's compact sport-utilities, the Chevrolet S-10/GMC S-15, continued to buck the overall market by showing increases over last year. Sales of the S-10 Blazer were up 21.47 percent in March, while S-15 Jimmy sales were up 6.00 percent.

Sales of the Jeep Wrangler were up 28.33 percent.

Domestic stock rises to 77 days

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto companies and their car dealers, awaiting the traditional spring selling season, entered April with inflated inventories of new, unsold cars.

The April 1 stockpile of domestically produced cars equaled a 77-day supply — a full two weeks more than the 63 days' supply the industry averaged on April 1 the past five years.

Car stocks on April 1 totaled 1,822,224, the highest count since the record of 1,900,096 cars in inventory on July 1, 1987.

The April 1 stockpile was more than 25,000 units greater than the March 1 inventory of 1,796,544 unsold cars, which represented a 78-day supply. On April 1, 1988, inventory stood at 1,574,529 — a 58-day supply.

During March 1988, the Big 3 offered retail incentives, and General Motors and Ford Motor Co. sweetened them in the final days of the month.

The need for the new incentives was apparent, with GM at an 83-day supply, or 916,180 cars in stock, Chrysler Motors at an 80-day supply, or 246,599, and Ford with an 81-day supply, or 575,800.

Both GM and Chrysler additionally took the inventory-reduction step of idling plants during the past few months. GM extended some of the shutdowns to two and three weeks instead of the usual one-week closings.

By company on April 1, domestic inventory shares were as follows: GM, 50.28 percent; Ford, 31.60 percent; Chrysler, 13.53 percent; Honda, 2.02 percent; Nissan, 1.11 percent; Toyota, 0.82 percent; Mazda, 0.54 percent; and Mitsubishi, 0.10 percent.

The year-earlier the shares were: GM, 51.35 percent; Ford, 28.71 percent; Chrysler, 15.55 percent; VW, 1.53 percent; Nissan, 1.15 percent; Honda, 0.97 percent; Toyota, 0.41 percent; and Mazda, 0.33 percent.

There were several models with inventory in excess of 100 days' supply on April 1.

A number of car lines showed substantial month-to-month increases March 1 to April 1: Geo Prizm/Nova, 246 vs. 180; Cutlass Supreme, 150 vs. 81; Monte Carlo, 121 vs. 42; and Regal, 124 vs. 105.

The uneven inventories mean some dealers may find themselves short of some models. Although overall stocks were glutted, car lines with less than a two-month supply included: Honda, 29 days; Toyota, 25 days; Mitsubishi Eclipse, 26 days; Dynasty, 44 days; Celebrity, 46 days; Continental, 55, Laser, 57 days; and Plymouth Acclaim, 59.

Shares by market classification on April 1 were: intermediate, 43.88 percent; compact, 23.35 percent; standard, 18.06 percent; subcompact, 13.91 percent; and speciality, 0.80 percent.

On April 1, 1988 the segment shares were: intermediate, 42.90 percent; compact, 24.26 percent; standard, 18.79 percent; subcompact, 12.78 percent; and specialty, 1.27 percent.

Raider hits Toyota affiliate

Pickens buys 20% of Japan supplier

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Corporate raider T. Boone Pickens Jr. revealed last week that he has purchased 20 percent of a Toyota affiliate.

The Texas-based investor acquired stock in Koito Manufacturing Co., an auto light maker and major Toyota supplier. Toyota owns 19.1 percent of the company.

Pickens denied he purchased the stock in an effort to "greenmail" Toyota into buying out his shares.

If greenmail is Pickens' aim, the market is signaling him that it won't work, according to analyst Stephen Usher, Kleinwort Benson International, Tokyo. Not only might Toyota not respond, but other Japanese firms might refuse to trade Koito stock in a united front against an unfriendly takeover.

Analysts say Pickens is eyeing Toyota's 1.3 trillion yen ($10 billion) in cash and liquid assets.

In 1987, a domestic investor bought up 7 percent of the Toyota Automatic Loom Works, the founding company of the Toyota group. Within two months, a settlement was reached, and Toyota bought back the shares for 30 billion yen ($230 million).

But there was undoubtedly some emotional factor involving the founding company.

Koito has been subject to frequent speculative moves, pushing up the stock price from 700 yen ($5.38) a few years ago to 5,470 yen ($42.07) — double most auto issues — a few days before Pickens' announcement. The stock dropped 14 percent when Pickens' interest was revealed.

SUBARU

FROM PAGE 1

"He was using it for personal gain, knowing it was an inflammatory issue."

Lloyd said the ruling means he won't recover his $700,000 investment in the Subaru dealership that he operated for four days.

He had acquired the franchise from Warren Henry Subaru, which is about three miles from his dealership. Lloyd said he will probably drop Warren Henry Subaru from the suit. Lloyd cited a longtime friendship with the owner as the reason. Lloyd had paid $339,000 to the owner for the inventory and parts.

Lloyd built a showroom, created advertising and participated in a Florida auto show as a Subaru dealer. But four days after he obtained the franchise from Warren Henry Subaru, Subaru said it was canceling the letter of intent. Lloyd sold three cars from the inventory he acquired before the company took down his signs.

"I am very disappointed in the ruling," said Lloyd. "I just lost $700,000, but I'm still the largest used-car dealer in Miami."

Lustbader said Subaru has several black dealers. The company is searching for a dealer for Warren Henry Subaru's franchise, he said.

PRODUCTION

Truck output sets record for quarter

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers built more trucks in the first quarter of this year than in any other first quarter.

Truck output reached 1,158,338 units, 7.26 percent higher than the previous first-quarter record of 1,079,887, set in 1988. The total was 12.22 percent more than the last year's fourth-quarter build of 1,032,183.

In March, truck production totaled 396,020, 3.93 percent more than February's 381,046 but slightly (0.25 percent) below the year-ago month's 396,997.

Last week's targeted truck output of 89,040 was 15.67 percent above the prior week's 76,977 and 18.45 percent higher than the year-ago week's 75,171.

Auto output for the first quarter was 1,899,299, a bit above (0.99 percent) the 1988 fourth-quarter total of 1,880,687 and 11.70 percent more than the year-ago quarter's 1,700,404.

March car assembly of 652,146 was 7.08 percent above the February total of 609,024 but was 1.16 percent below the year-ago month's 659,793.

Scheduled auto output last week totaled 160,166, 22.81 percent more than the previous week's 130,416 and 18.96 percent more than the year-ago week's 134,637.

Companies split last week's estimated build as follows: General Motors, 47.56 percent; Ford Motor Co., 26.36 percent; Chrysler Motors, 12.05 percent; Honda of America Manufacturing, 4.84 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.19 percent; New United Motor Manufacturing Inc., 2.50 percent; Nissan Motor Manufacturing Co. U.S.A., 1.46 percent; Toyota Motor Manufacturing U.S.A., 1.25 percent; and Diamond-Star Motors, 0.79 percent.

GM's Doraville, Ga., plant and its Reatta Craft Centre in Lansing, Mich., are idle until April 17 for inventory adjustment.

The Jeep Grand Wagoneer line in Toledo, Ohio, is shut down until April 17 to adjust inventory.

Canada trucks climb to peak

Canadian truckmakers set a quarterly production record with first-quarter assembly of 260,430.

The total surpassed the prior first-quarter peak of 245,463 built in 1988 and also beat the 1988 fourth quarter's 247,025, which had been highest quarter ever.

Last month's truck assembly totaled 87,379, slightly above (0.70 percent) the February build of 86,770 but 4.62 percent below the year-ago month's 91,612.

Auto production for the first quarter was 252,834, 12.15 percent more than the 1988 fourth-quarter build of 225,433 but 12.36 percent below the year-ago quarter's 288,485.

March's auto assembly of 88,681 increased 5.54 percent over the February total of 84,028 but dropped 19.49 percent from the year-ago month's 110,143.

Japanese drive for fleet sales

Bigger car supply opens fat market

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Japanese car importers are worrying domestic automakers again, this time by flinging down the gauntlet for a share of the lucrative U.S. fleet market that consists of about six million vehicles.

Japanese cars accounted for 18.5 percent of all fleets in the 1988 model year, up from 14.4 percent in 1984, according to Ford Motor Co. figures. Most of the inroads made by Japanese imports into the total fleet market have been on the rental-car side of the industry.

But now the Japanese makers are eyeing corporate and government fleets. Currently, imports account for less than 1 percent of the corporate sales, service, executive, government and utility fleets nationally, according to a survey of members by the National Association of Fleet Administrators. The association pegs this market at roughly 3 million vehicles.

And the Japanese want a part of it.

For the first time, several fleet-leasing companies have included Japanese cars in their fleet selector lists to customers.

"They have become very competitive," said Harold Barton, Chrysler Motors general manager of fleet operations. "Now they have availability. Their docks are loaded with cars. They're knocking on doors they never knocked on before."

Barton characterized the types of deals being offered to fleet managers by Japanese importers as unbelievable. "I could almost say they are dumping cars or trying to dump cars on the fleet market," he said.

In the past, companies like Nissan and Subaru ignored the fleet market because they didn't have enough vehicles available to bother with it, particularly earlier in the decade when they were retailing as many vehicles as quotas would allow them to import.

Besides, their cars were so popular in the retail end that fleet managers, who weigh incentives before buying, were edged out by retail customers who were willing to pay premiums over sticker prices in many cases. If a fleet wanted Japanese imports, it had to buy them out of dealer stock, just like a retail customer.

But that has changed now that the devalued dollar has increased Japanese-car prices and Japanese automakers have built assembly

Executive income off

Big 3 leaders make less on stock options

By David Versical and Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — The top five executives at each of the Big 3 automakers saw their collective compensation fall 36 percent in 1988 as income from stock options declined dramatically.

But the salaries and bonuses of those 15 executives rose as the Big 3 recorded their best combined profits ever. The average 1988 salary was $656,600 — 15 percent above the previous year. Average bonus payments rose 1 percent to $1.07 million.

Combined income from stock options dropped more than half, however, chiefly because of a severe drop at Chrysler Corp. Three of the top executives at Chrysler, two at General Motors and one at Ford Motor Co. exercised no stock options last year, the automakers revealed in their 1988 proxy statements.

GM's top executives took home more in 1988 than in 1987.

Ford Chairman Donald E. Petersen took home more than twice as much as any of his peers in the executive elite. His $10.5 million compensation was boosted by $7.1 million in stock options last year.

Although the total payouts were down, the UAW again criticized the Big 3 chiefs. It lambasted Ford, for example, for indulging in what the union called "Detroit's annual executive pigout."

Salaries of the Big 3 chiefs — excluding bonuses and stock options — have risen 42 percent in the last five years. That's about triple the rate of increases in the con-

Saturn runs race for 1990 intro

By Al Fleming and Michelle Krebs
Copyright, 1989, Automotive News
AUTOMOTIVE NEWS STAFF REPORTERS

LeFauve

Smith

Fourteen months before the much-publicized target date for Job One, Saturn Corp. President Richard G. "Skip" LeFauve acknowledges that some participants might find Saturn's development chaotic.

But he says General Motors' new car channel is on schedule — although the schedule has become a little fluid.

GM Chairman Roger B. Smith has vowed repeatedly that he will drive the first Saturn car off the assembly line in Spring Hill, Tenn., before he retires in July 1990.

LeFauve told Automotive News, "At this point we would be very ambitious talking about summer 1990 (production startup) with introduction in the fall. We're talking June, July, August in terms of actual vehicle start."

Asked whether November 1990 is still Saturn's market debut target, LeFauve said: "That's a good guess, but it's not formalized. We think it's important that dealers get involved in that decision."

Meanwhile, a number of sources within Saturn, GM and the supplier community say body engineering snags may delay public introduction of the car, possibly into 1991. Newly hired engineers are joining engineers from other GM divisions and suppliers to work on Saturn.

Friday in Spring Hill, GM Chairman Roger Smith was emphatic that Saturn is on schedule and then some.

"I've seen just-in-time inventory, but this is the first time I've seen just-in-time investment," Smith told Automotive News. "They've got everything running just right and they're coming along great.

"Everything I've seen is ahead of schedule and under budget. Everything is coming into place just in time. The biggest problem was lost foam casting (for engines). That is now in hand.

"Just-in-time investment is helping to get the car off the line on time."

In an interview a week earlier, LeFauve said some suppliers may be having trouble meeting ambitious deadlines, but he said the schedule will be met.

Pontiac tackles fraud, revs up fix-it program

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Although Pontiac apparently has eliminated system flaws that allowed zone employees to bilk the division of as much as $1 million, the division continues a policy of reimbursing car owners for product defects not covered under warranty.

Dealers report Pontiac has increased non-warranty reimbursements — to maintain high customer satisfaction — since criminal abuses by division employees in at least four zones were discovered more than two years ago.

"They are more lenient now than ever with trustworthy, CSI-conscious dealers," one dealer said last week. "Pontiac changed the system that allowed dishonest employees to steal, but they give dealers more leeway to take care of their customers."

Pontiac last week again declined to go beyond its previous responses to inquiries about the non-warranty fraud and related matters.

"We consider it a private business matter," a Pontiac spokesperson said last week. "We have investigated it, we've taken appropriate disciplinary action, and we are cooperating with the authorities."

Since the February sentencing of the final Detroit zone employee involved in the scams, two more former Pontiac aides have pleaded guilty to mail fraud and have been sentenced in connection with a type of non-warranty fraud that plagued Pontiac zone offices in Detroit, Buffalo, Chicago and Dallas.

The latest guilty pleas bring the number of former Pontiac employees convicted in the scams to eight, with fraud losses to Pontiac of more than $225,000 from 1981 to 1987, according to federal criminal indictments.

But the total could be much higher, according to one federal government source who asked not to be identified.

"It would be very foolish to think they uncovered it all," he said. "You never do in this kind of a fraud."

One dealer whose dealership was used in the scam said he was told by Pontiac officials that losses in just the Detroit and Buffalo zones surpassed $250,000 each. Another dealer said that based on the checks he saw, he believes total fraud losses to Pontiac could approach $1 million.

A former Pontiac official who was familiar with the series of frauds told Automotive News last week that even $1 million is probably too low an estimate.

Baker to direct kinder, gentler Rough Riders

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

ORLANDO, Fla. — While reaffirming a get-tough policy with automakers on fleet subsidies, the steering committee of Ron Tonkin's Rough Rider dealer group is seeking to soften its adversarial image to build greater dealer support.

The group is so concerned about its image that it considered a name change from Rough Riders to the Franchised Dealer Guardian Angels. The motion was defeated during the five-hour meeting.

During that first official meeting last week, the committee elected Robert H. Baker chairman. He is president of Bob Baker Enterprises of San Diego, which holds nine franchises in Southern California.

The committee and Rough Riders were formed by Tonkin, the fiery president of the National Automobile Dealers Association.

"We want to emphasize that we are not an adversarial group and we are not out to run roughshod over the manufacturers, as the name 'Rough Rider' has suggested to some people," said Baker. "We are out to correct a situation that we see as an erosion of the franchised dealer's position, and we will do whatever is necessary to protect ourselves. But we believe we can accomplish that without getting into a fight with the factories."

Baker's election as point man for the group signaled Tonkin's move to the background.

Tonkin said he was extremely pleased with the group's first meeting, but deferred comments on the details to Baker, who will now serve as the group's spokesman.

"For me to sit there and watch the group come together was a dream come true," Tonkin said. "It was one of the happiest moments of my life."

He said the committee's first order of business at the meeting was to seek assurances from NADA officials present that the Rough Rider group will continue

EC official wants to dump quotas

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The European Commission heard a proposal that existing national restrictions on Japanese cars be lifted and not replaced by a single Europe-wide quota after 1992 market unification.

It was also recommended, in a message delivered by Martin Bangemann, the EC's new industry commissioner, that rigid local-content rules for Japanese transplants be softened somewhat and that EC producers must become more competitive in the post-1992 era.

Bangemann's new, less-protectionist posture was aired at a meeting of the 12 EC industry ministers in San Sebastian, Spain.

While the commission has always opposed quotas and local-content targets in principle, it has seemed willing in the past to find a compromise between the differing views of member states. The most recent comments signal a change that is deemed likely to touch off a lively debate.

"This is going to be a very difficult debate," said a commission official, who requested anonymity.

The official said the commission will almost certainly develop definitive car industry proposals to take to member states before the end of summer.

Auto execs from outside view post-1992 Europe, Page 30

Bangemann, who is West German, received a mixed initial reaction from the his colleagues. The French, Italian and Spanish governments support stronger protectionist measures than West Germany, Britain and others.

Europe's Committee of Common Market Automobile Constructors did not respond formally to the remarks, a committee source said, because member companies could not agree on a common position. Peugeot and Fiat have taken a much harder line regarding Japanese imports and transplants than West German makers.

A commission source in Brussels, Belgium, said Bangemann's proposal was based on various studies showing that Europe's car industry trails Japan's in productivity, quality and financial resources and must concentrate on improving competitiveness rather than invoking protectionism.

Bangemann said he opposed rigid requirements for local content that have been pushed by French and Italian officials.

The Brussels official predicted that the EC will not adopt specific local-content rules for Japanese transplants.

"We don't like any rules on local content that contain figures," he said. "That can lead to protectionism."

Many industry leaders in Europe regard 80 percent as a critical level because they feel it necessitates production of powertrain and other high-technology components in Europe.

Cesare Romiti, managing director of Fiat S.p.A., recently told the European Parliament that Japanese transplants must be willing to make a full commitment to EC production beyond "pure assembly lines of obsolete models."

Rather than focusing on protectionism, Bangemann's remarks signal a new focus on the international competitiveness of European producers.

He cited an analysis showing that European-owned companies needed 35.9 production hours to build a vehicle in 1987, while Japanese plants in Japan took 19.1 hours. He said Japanese plants in the United States needed just 19.6 hours, American companies in Europe took 30.9 hours and U.S. domestic makers needed 26.5.

Still, Europe's volume carmakers have tightened costs and improved profitability in the buoyant market of recent years. The EC's four largest European-owned companies have all reduced break-even levels drastically since 1980. Since that time, Volkswagen AG has pared its break-even point from 2.5 million units to 1.7 million last year, while Fiat, Peugeot S.A. and Renault have all declined from two million units to 1.2 million.

"But the key issue is how is the car industry in the EC is going to cope when there is a slower rate of growth and new capacities come on stream," said the official. "It will require huge investments to renew models, and the EC carmakers have less financial resources than competitors."

He cited a study showing that EC makers are 65 percent below the Japanese when comparing cash flow as a percentage of needed investment.

AIADA sees threat in European unity

WASHINGTON — Import car dealers are worried that 1992 market unification in Europe could lead to a trade war that would result in quotas on European cars.

Robert McElwaine, president of the American International Automobile Dealers Association, told the U.S. International Trade Commission last week he expects the United States will retaliate against Europe if U.S.-made Hondas are included in European quotas as Japanese cars. Such a trade war would hurt dealer business, he said.

"Our members who sell European makes for their livelihood could well be held hostage in any trade dispute with the European Community," he said.

Honda plans to export 50,000 cars annually from its Marysville, Ohio, plant to Europe, beginning in 1990. McElwaine said inclusion of those cars under European quotas as Japanese vehicles could lead to retaliation in the form of quotas or higher tariffs on BMW, Jaguar, Mercedes-Benz and Volkswagen.

McElwaine said high local-content requirements for Japanese transplants in Europe combined with low import quotas in some countries being expanded across the entire market could cause problems in the United States.

"Low quotas combined with high domestic-content requirements will constitute a virtual ban on cars otherwise destined for Europe," McElwaine said.

As a result, he said, more Japanese cars, built at U.S. transplants and in Japan destined for Europe may be forced on the U.S. market. That, in turn, would put pressure on Japan to reduce export quotas to the United States.

Hot-shot Taurus meets lukewarm reception

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

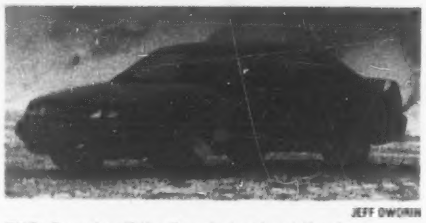
DETROIT — The Taurus SHO — Ford's hot new performance sedan — has been greeted with a lukewarm reception in the marketplace.

Since its introduction last fall, Ford has sold 4,400 SHOs. Ford had planned on about 20,000 sales for the model year — a figure that matched the supply of the 24-valve Yamaha-built V-6 that powers the SHO.

With the model year about half over, the pace will have to pick up considerably to meet the goal. But at the start of production last October, Ford officials gave every indication that the car would sell out the model-year build without a sweat. The optimism stemmed in part from enthusiastic reviews in buff magazines, which were impressed by Ford's efforts at mating 220 horsepower and a front-drive family sedan.

"It has really surprised me," said one engineer who worked on the program. "When the marketplace rejects you, you kind of take it personally."

Ford Division officials acknowledge that the car has not done as well as expected. But they say their sights are set on spring, the traditional peak for performance cars.



JEFF DWORIN

SHO: Speedy off the line, but not out the door

A number of explanations have been offered by those within Ford for the SHO's sluggish start. They include:

- The SHO is available only with a manual transmission, a stiff handicap in the U.S. market. Ford is said to be looking closely at the possibility of adding an automatic.
- Ford dealers aren't used to selling a car like the $19,739 SHO. The division and its dealers are learning as they go. One dealership manager said customers interested in the car know more about it than his people do.
- The car doesn't stand out visually from the standard Taurus. In the words of one insider, it needs "more bells and whistles."

Others argue that the SHO should keep its understated styling cues. A dramatic change might violate the European styling theme embodied by Taurus.

Changes for 1990 won't be readily apparent. The SHO is expected to get anti-lock brakes and driver-side air bags as standard features.

Thomas Wagner, Ford Division general manager, also is upbeat about the car's prospects.

"The market is pretty thin up there with manual transmission and a $20,000 price," said Wagner. "We have done what we wanted. We have a presence there. People who have them are happy. They feel they got a hell of a bargain for $20,000."

Two of the nation's largest Ford dealers, meanwhile, reported sharply different responses to the SHO.

Paul Swerling, general manager at Wilmington Sales in suburban Boston, said he has sold just a few. But Craig Kapson, president of Jordan Ford in Mishawaka, Ind., said the SHO has done very well, particularly with the engineering community in his area.

Ford sold 1,400 SHOs as the car came to market in November and December. In the first quarter of 1989, sales totaled 2,990.

RV makers waiting for sales upturn

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RV manufacturers started 1989 with strong wholesale shipments, but the industry is still waiting for the traditional spring retail upturn.

One bright spot is Chrysler Motors' recent incentive on full-sized vans. As of April 1, Chrysler began offering $2,000 rebates on full-sized van conversions and $1,000 on unconverted full-sized vans.

Chrysler told dealers a van had to have a conversion package worth a minimum of $2,500 before it could qualify for the $2,000 rebate. Consumers can select low-interest financing in place of the rebate. The Chrysler program runs indefinitely.

Converters like William Snook, president of Coachmen Vans in Elkhart, Ind., and Good Times Van in Bentley, Texas, would like to see Ford and General Motors place incentives on their full-sized vans.

"We all have to get something going. Van converters have been discounting rampantly since mid-February to keep (their wholesale) inventories flowing because we all made commitments to (Detroit manufacturers) to get the chassis," Snook said.

Even dropping prices at the wholesale level hasn't been enough, he said.

Ultimately, it will be up to Detroit manufacturers to stimulate the market.

Part of the problem facing van conversions is that when cars are heavily incentivized, buyers tend to gravitate toward them. Converters believe they need parity with auto incentives for their products to compete equally.

Meanwhile, converters opened 1989 on a strong note, wholesaling 15,300 conversions in January, a 9.30 percent increase over the year-earlier month. Overall, the RV industry wholesaled 32,400 vehicles of all types during the month, a 5.19 percent increase over last year, according to the Recreation Vehicle Industry Association.

That represents a seasonally adjusted annual rate of more than 423,000 deliveries, RVIA noted, representing a very strong start for the industry as a whole.

The association said the average wholesale price of a compact van conversion in January was $15,538. Compact conversions accounted for 27.33 percent of the vans in its price survey.

The average wholesale price of a standard van conversion was $18,642.

Those prices were based on reports by 96 van converters and shipment of 6,630 units — 43.33 percent of the total number of van conversions shipped in the month.

Shipments of seat-delete vans to converters by Chevrolet, GMC, Ford and Chrysler, portending future conversion activity, increased 85.83 percent in January. Detroit manufacturers shipped 22,300 raw chassis to converters during the month, up from 12,000 in the year-earlier period.

Of the January total, 5,100 were compact chassis and 17,200 were full-sized chassis.

Compact chassis shipments were up 50.00 percent from 3,400 a year earlier, while full-sized chassis shipments were up 100.00 percent from the 8,600 units shipped in January 1988.

Firm plans standards to judge converters

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Automotive dealers soon will have standards to judge the quality — and customer satisfaction levels — of many major van converters.

Service Marketing Unlimited of Fort Worth, Texas, is developing a program to establish industry standards by which converters can be compared and rated on their vehicle quality, aftersale support and other key criteria.

Many of the industry's biggest firms are involved with the Service Marketing program. They include Mark III Industries of Ocala, Fla.; Starcraft Corp. of Topeka, Ind.; Coachmen Vans of Elkhart, Ind.; Good Time Vans of Bentley, Texas; and U.S. Conversions of Elkhart.

Glaval Inc. of Elkhart previously announced a similar plan to develop customer satisfaction index ratings through J.D. Power and Associates, a market research firm in Agoura Hills, Calif.

Jake Cash, chairman of Service Marketing, said customer surveys have been undertaken for some converters. The companies are expected to use the results in their sales and promotional efforts next fall.

Cash said the program was inspired by one of his clients, James Payton, the 1988 president of the National Automobile Dealer Association and owner of Payton-Wright Ford in Grapevine, Texas.

Payton told Automotive News that he informed Service Marketing, "We were not handling any van conversions because our experience with them had been so bad. By the time the vans were sold and customers drove them 6,000 or 12,000 miles and we filed a claim for warranty, the converter was either out of business or didn't pay the warranty well.

"I said that before we got back *into it, we wanted to talk to a* company that had a track record, not just a salesperson saying how great they were. I wanted them to show me where they stood — in a recognized survey, something similar to what NADA does, something with credibility and validity. And, out of that, Service Marketing developed this program."

Payton added, "I feel there are a lot of dealers who feel the same as I do. They've been burned (by van converters) in the past," and are leery of them.

He has stocked as many as 15 conversions at a time in past years, but he doesn't currently market any.

"If we could find the right company, with the right kind of reputation to back the products, somebody we felt would be there down the line, I would give it (retailing conversions) serious consideration," he added.

Cash's firm has done sales follow-up and customer-satisfaction work for many individual dealers and has worked with Ford Dealer Advertising Fund groups, such as the one in Dallas County, Texas.

The firm isn't large, but it counts a roster of blue-ribbon dealers among its clients.

Beside Payton, they include James Caplinger, 1987 NADA president and owner of Caplinger Chevrolet-Oldsmobile in England, Ark.; Robert Russell, the 1987 Time Magazine Quality Dealer Award winner and owner of Russell Chevrolet-Honda in North Little Rock, Ark.; and Sam Pack, Time's 1988 Quality Dealer and owner of Lee Jarmon Ford in Carrollton, Texas.

Cash said the firm is not interested in promoting itself and also is not interested in publicizing ratings for individual manufacturers as J.D. Power does.

"We're not interested in competing with J.D. Power. We're not going to put out a public list of who is No. 1, 2 or 3," such as Power does in the car market, Cash said.

The company is surveying the purchasers of various brands of van conversions and will turn the survey results over to individual converters.

It will supply industry standards to dealers, and the dealers then will be able to ask converters how they rank compared to the standards.

The survey information also will enable individual converters to determine any weak spots and improve on them, said Derrell Pitcock, president of Service Marketing.

Under a separate program, Pitcock said, the firm is conducting similar surveys and developing data for a number of Ford dealers.

Along with Dallas-Fort Worth Ford dealer groups, his company is also working with a group of dealers in Tulsa, Okla.

It is working with 248 Ford dealers in developing standards by which they can judge their individual performances, Pitcock said.

AWARDS TIME: *RVIA honors Starcraft chief, others at its annual meeting*

RESTON, Va. — Don Cuzzocrea, president of Starcraft Corp., Topeka, Ind., and immediate past president of the Recreation Vehicle Industry Association, has received the association's highest honor, its Distinguished Service to the RV Industry Award.

The award was presented at the association's annual meeting in Maui, Hawaii.

Bill S. Doyle Jr., president of Western Recreational Vehicles, Yakima, Wash., received RVIA's Distinguished Achievements in RV Standards Award. Dave Preston, publisher and editorial director of RV West magazine, Alameda, Calif., received the Distinguished Service in RV Journalism Award.

The meeting was attended by nearly 300 association members and their spouses.

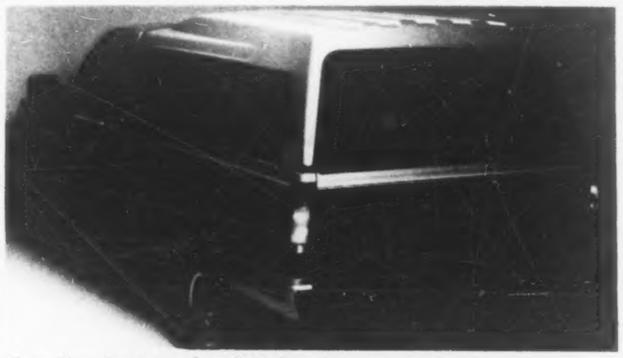
Also at the meeting, Richard T. Curtin, director of the University of Michigan Survey Research Center, announced the results of his 1988 RV consumer survey. Curtin, who has been monitoring consumer reaction to the RV industry since 1980, reported that the growth in the number of households with recreational vehicles has averaged about 100,000 per year since 1984.

Keynote speaker at the meeting was Phillip M. Novell, general marketing manager, Ford Division, who provided association members with an overview of Ford's continued commitment to the RV industry.

In his state of the association address, Allen Yoder Jr., RVIA chairman and president of Jayco Inc., Middlebury, Ind., said, "RV sales are stronger today — with more people involved in the lifestyle — than at any time in our history. Numerically speaking, 1988 was the best year that the industry has experienced in over a decade."

Yoder also presented David J. Humphreys, RVIA president, with a "first and only" RVIA president's ring. Speaking for the association's executive committee, Yoder thanked Humphrey for his "year-in, year-out work to advance the RV industry and recreation."

Over the past 20 years, Yoder told Humphreys, "you've successfully worked to establish a solid RV industry presence on Capitol Hill and have given us and the more than 100 recreation-related trade associations an active voice in government policy making on recreation issues."



Gem Top features insulated caps
Gem Top Manufacturing of Clackamas, Ore., has introduced a new line of polyurethane foam-insulated Navajo and Poly tops. The vacuum-formed polymer caps are available in either textured or high-gloss finish.

RV BRIEFS

Aviator's Street Heat

Aviator Conversions of Nappanee, Ind., has formed Street Heat Automotive Accessories to market dress-up accessories for the sporty pickup market.

The company is marketing the brand-name accessories, including some it manufactures itself, to auto dealers. It is also talking to major mass merchandisers about distribution, according to Larry LaGuardia, Aviator vice president and general manager.

The accessories include dress-up interiors, graphics, mag wheels and "anything you can put on a truck." They are being marketed individually and in kits for Ford, Chevrolet and GMC pickups, LaGuardia said.

Dynasty relocates

Dynasty International, a van and truck conversion company, recently moved into a new facility in Elkhart, Ind. The site houses corporate offices and conversion operations.

"We moved from our Wakarusa (Ind.) plant to be closer to our suppliers and to obtain a larger facility," said Jim Bumgardner, company president.

Oshkosh assembly sites

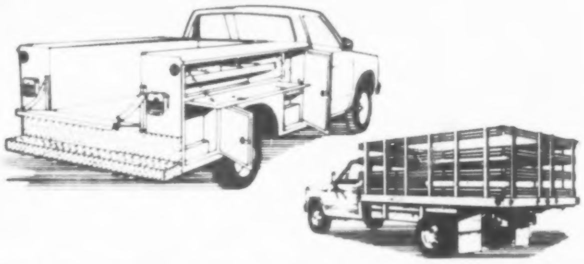
Oshkosh Truck Corp. of Oshkosh, Wis., selected Oshkosh and Gaffney, S.C. as sites to manufacture two new lines of motor home and commercial step van chassis.

The dominant factor in site selection was proximity to component suppliers.

The company is currently producing a high-capacity chassis in Oshkosh. The new chassis is a low-profile unit designed for the light-weight capacity sector of the market. Most of the major components will come from Chrysler Motors' Acustar distribution center in Beaver Dam, Wis.

The company will produce a medium-capacity chassis, acquired earlier this year from John Deere, at the Gaffney facility.

NEED A CHASSIS?



Reading's Chassis Pool Means Quick Delivery

Let us help you make the sale by making sure you have the pickup chassis you need to get your customers into their new service or stake body with little delay.

With our Chassis Pool, we can quickly dispatch the complete service or stake body unit you need.

Reading's Chassis Pool — time-saving availability backed by Reading's well-known quality and reliability.

Car sales blossom

Early-April climbs 30% over sub-par '88

By Karen Detkowski
SPECIAL CORRESPONDENT

With incentive programs in full bloom, U.S. automakers reported a 30.12 percent sales gain for the first 10 days of April.

Deliveries of U.S.-built cars totaled 188,608, compared to a sub-par 144,954 in the same period of 1988. Last year's early-April total was 24.95 percent below the 1987 figure, despite major incentive programs.

Each of the domestic makers delivered more cars in the April 1-10 period than they did a year ago. It was the first time this year that all makers reported gains for a 10-day period.

The average daily-selling rate was 23,576 vs. 18,119 last year. Both periods had eight selling days.

Ford's sales rose 46.97 percent in the first 10 days of April.

General Motors' total was up 20.80 percent over 1988, and Chrysler Motors' sales increased 12.36 percent.

Honda's transplant car sales rose 44.06 percent, and Nissan's sales jumped 40.73 percent.

Toyota delivered 2,700 domestically produced cars — 1,591 Camrys and 1,109 Corollas — up from 519 units last year when only the Corolla was assembled in the United States.

Mazda reported 977 sales of MX-6 models built at its Flat Rock, Mich., plant. The year-ago total was 230.

Domestic-sales newcomer Mitsubishi delivered 511 Eclipse models. The Eclipse is built by Diamond-Star Motors, the Mitsubishi-Chrysler joint venture in Normal, Ill.

Sales of U.S.-built light trucks nearly matched the percentage gains recorded by cars.

Truck sales rose 24.74 percent to 108,151 units in the first 10 days of April, up from 86,704 last year.

All light-truck producers reported increases this year.

Ford truck sales were up 28.19 percent; GM's light-duty deliveries rose 26.53 percent; Chrysler truck dealers increased sales 14.56 percent, and Nissan domestic light-truck sales rose 62.65 percent.

Combined sales of domestic cars and light trucks were 296,759 for April 1-10, up 28.10 percent from last year's 231,658.

Import supply eases to still-high 79 days

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

With new-car sales trailing the year-ago pace by nearly 12 percent and inventories above last-year's totals, domestic automakers and importers are watching the sales charts with nail-biting concern.

Unless the hoped-for spring upturn becomes a reality, the solution to the inventory problem may involve production cutbacks and reductions in shipments from overseas in addition to the incentive programs that already are in place.

Early-April sales of domestic cars were encouraging, but it will take a few more periods to tell whether the industry is really making a dent in the domestic and import stockpiles.

Sales of both domestic and imported cars rose last month after a lackluster February, but they were weak compared with March 1988. Domestics were down 12.83 and imports dipped 9.01 percent.

Inventories of both domestic and imported cars are higher than usual for this time of year.

On April 1, the import car inventory declined somewhat from the March 1 level but still was higher than that of April 1, 1988.

There was a 79-day supply of imports on April 1, — 36 days higher than the 43-day average for that date the past five years. The stockpile of U.S.-built cars was 77 days, two weeks more than the domestic five-year average.

The days' supply of import cars dropped from 87 on March 1, but rose from 67 on April 1, 1988.

Import car stocks on April 1 totaled 713,783, down about 6,300 from the March 1 total of 720,056, but up about 43,000 over 670,608 on April 1, 1988.

Combining the domestic and import inventories on April 1, dealers had 2,536,007 cars to sell, a 77-day supply. On March 1, there was an 80-day supply or 2,512.026 cars in stock, indicating that the industry made little headway in reducing the new-car inventory during March. The April 1 total was almost 300,000 units higher than the stockpile of 2,245,137 cars on April 1, 1988, a 60-day supply.

The Big 3 reported sharp increases in their days-supply numbers on April 1 this year compared with the same date in 1988. GM's total car supply, including captive imports, was 88 days on April 1 vs. 66 a year ago. Ford Motor Co.'s numbers were 82 vs. 58, and Chrysler Motors' were 90 vs. 64.

Imported truck inventories were 170,500, compared to 201,420 on April 1, 1988. The days-supply figures were 73 this year and 74 in 1988. Since total inventories were down 15 percent and the days' supply was about the same, the daily selling rate has declined during the past 12 months.

PROXIES

FROM PAGE 1

sumer price index and more than three times the rise in the average autoworker's wage.

The profit trend lines for each maker have varied over that five-year span. Ford earned 82 percent more last year than it did in 1984. GM was up 7.5 percent. Chrysler's net income was down 55 percent from 1984.

In all, the 15 chiefs took in an average of $2.7 million each last year in salary, bonuses and stock options. That compares to $4.2 million the previous year.

Ford and GM released their proxy statements last week. Chrysler announced the previous week that salaries for its top five executives rose an average of 10 percent, bonuses fell 22.5 percent, and income from stock options declined 90 percent.

Here are summaries of GM' and Ford's proxy statements.

Ford Motor Co.

Ford disclosed that its top five officers shared $11.00 million in salaries and bonuses last year.

The five also exercised $11.68 million in stock options, bringing their total payout to $22.68 million. That compares to a record $23.06 million shared the previous year.

Petersen nearly tripled his 1987 income of $3.73 million. Last year's $10.49 million payout included $7.15 million from stock options. Petersen exercised no options in 1987 while taking home a $929,934 salary and a $2.8 million bonus.

Vice Chairman Harold A. Poling, meanwhile, saw his compensation fall from $10.87 million in 1987 to $4.07 million last year. Poling's 1987 income was boosted by $8.06 million from stock options. Other compensation that year included an $808,697 salary and $2 million bonus.

Total compensation for Executive Vice Presidents Philip E. Benton Jr. and Allan D. Gilmour also fell last year.

Gilmour exercised no stock options in 1988 after taking in $999,937 the previous year. His 1988 salary was higher than the $379,918 in 1987, while his bonus fell from $1.37 million to $1.20 million.

Benton's income from stock options fell more than $300,000 from the $1.48 million he collected in 1987. His bonus dropped by $70,000 to $1.30 million, while his salary climbed to $534,785, an increase of more than $121,000 from the previous year.

Executive Vice President Louis R. Ross saw his income climb by more than $1 million. His $1.85 million in stock options tripled his 1987 take. Ross's salary increased nearly $70,000 from 1987's $452,568; his bonus fell from $1.37 million to $1.1 million.

General Motors

Total compensation for the top five GM executives rose 38.91 percent in 1988, to $9,893,673 from $7,122,420, according to GM's annual proxy statement, mailed to shareholders last Friday.

Total compensation for Chairman Roger B. Smith increased 55.04 percent in 1988 to $3.69 million from $2.38 million in 1987.

Total compensation for President Robert C. Stempel rose 41.98 percent last year to $1.86 million from $1.31 million in 1987, when he served just four months as president.

Compensation for Vice Chairman Donald J. Atwood rose 35.94 percent last year. The 1988 total was $1.74 million vs. $1.28 million in 1987.

F. Alan Smith, GM executive vice president for operating and public affairs staff groups, saw his total compensation decline 20.86 percent last year to $1.10 million from $1.39 million because of less stock-option activity.

Lloyd E. Reuss, executive vice president for North American automotive operations, joined the ranks of the five top-earning executives in 1988. Reuss' total compensation last year was $1.5 million. His 1987 compensation was not reported.

The proxy disclosed that three directors will not seek re-election at the company's May 19 annual meeting in Detroit.

They are Atwood, who has been nominated as deputy secretary of defense by the Bush administration; Walter A. Fallon, former Eastman Kodak Co. president; and James D. Robinson III, chairman of American Express Co. The retiring directors will not be replaced.

PONTIAC

FROM PAGE 1

Automotive News first reported the existence of the scam, the resulting intensive General Motors warranty audit and the federal probe in April 1987. At that time, Pontiac said that the incidences of fraud were limited, isolated and involved only a few thousand dollars.

U.S. Postal inspectors are believed to be investigating at least one other zone.

The first indictments for fraud in the Detroit and Buffalo zones were returned in Detroit in February 1988.

One former Pontiac employee was indicted in that first wave in Detroit for fraud in both zones. He subsequently pleaded guilty to mail fraud charges. He had worked in both the Detroit and Buffalo zones and is believed to have carried the fraud with him from Detroit to Buffalo.

However, there seems to be no evidence to suggest the frauds in Chicago and Dallas are related to each other or the Detroit and Buffalo scams, according to federal investigators.

Typically, the Pontiac zone employees supplied phony vehicle identification numbers and induced or tricked Pontiac dealership employees to submit reimbursement claims for work that was never performed. The guilty zone employees then approved the phony claims, which were paid to accomplices or to aliases.

Pontiac was particularly vulnerable to this type of scheme because its system allowed zone employees to approve checks written by dealerships to customers with product defects not covered by warranty.

Zone personnel could "authorize Pontiac dealers to reimburse Pontiac owners for charges they had previously paid for repairs not directly covered under warranty," but "for defects for which Pontiac agreed to accept responsibility," according to the federal indictments.

As with a regular warranty claim, Pontiac dealers would write a repair order and submit a claim to the division. However, the repair order would not show normal parts and labor costs but would simply indicate that it was a customer refund.

The dealership would submit the non-warranty claim with a bill for repairs — supposedly submitted by the car owner who had his car repaired elsewhere — and the appropriate zone authorization.

The dealership would then write a check to reimburse the car owner and Pontiac would credit or reimburse the dealer.

The system allowed zone employees with the necessary approval codes — like assistant zone managers for service, as many of the guilty were — to approve payments for work that was never performed, frequently using vehicle identification numbers from scrapped vehicles in conjunction with accomplices or aliases.

Generally, the involved zone employees would simply take the bogus claim to a dealership and have unwitting dealership employees process it.

There has been no indication that other General Motors divisions suffered the same kind of systematic fraud.

A GM corporate spokesman last week said that divisional procedures vary on many matters — including refund and reimbursements for defects not covered under warranty.

In the most recent criminal developments, Michael J. Murray, former assistant zone manager for service in Pontiac's Chicago zone, pleaded guilty to two counts of mail fraud in U.S. District Court in Chicago.

On March 24, U.S. District Judge Ann Williams sentenced Murray to a six-month work-release program involving 1,000 hours of community service plus 4½ years' probation as part of a plea agreement with the U.S. attorney's office there. Williams also ordered Murray to make restitution of $27,000 to Pontiac.

Lloyd A. Novak, former district service manager in Pontiac's Dallas zone, pleaded guilty to two counts of mail fraud in U.S. District Court in Dallas. He had been indicted and arraigned on 27 counts of mail fraud but signed a plea agreement with the U.S. attorney in Dallas.

On March 16, U.S. District Judge Sidney Fitzwater sentenced Novak to four years in prison on one count, to be followed by five years' probation on a second. Fitzwater also ordered Novak to make restitution of $71,337.52 to GM.

Elaine B. Schneider, a Novak accomplice, was indicted with him, signed a plea agreement and pleaded guilty to one count of mail fraud. She was the first non-Pontiac employee to be charged as an accomplice in any of the cases. Schneider's role was as payee for some of the bogus customer reimbursements, according to the Dallas indictment.

She was sentenced to five years' probation and ordered to make restitution of $910.50.

Pontiac dealers whose dealerships were among those utilized by the guilty zone employees said that Pontiac changed its reimbursement procedures two years ago.

Although Pontiac still pays non-warranty claims, the dealers said, the division tightened control by issuing reimbursement checks directly to car owners at the zone level from a "sundry account," rather than by the dealerships.

One dealer said the division also seems to be "moving zone employees around more frequently" since the scam was uncovered.

The various scams disclosed so far involved 14 dealerships in the Detroit zone, eight in the Buffalo zone, seven in the Dallas zone and perhaps 10 in the Chicago zone. No dealership personnel were indicted.

In the the mid 1970s, several Chevrolet zones, particularly Boston, were hit with organized warra fraud — known as "Motorgate" — stemming from phony claims submitted by dealers.

In 1974, a Chevrolet regional service manager who had been investigating the Motorgate fraud was murdered.

One dealer was found guilty of defrauding GM of more than $600,000 in the Chevrolet scam. That dealer and several of his employees were convicted of fraud in Massachusetts state courts.

TONKIN

FROM PAGE 3

beyond Tonkin's term as NADA president.

"They wanted a commitment that the effort wasn't just going to die out after they went through the trouble of standing up and being counted," Tonkin said.

Other members of the committee also expressed optimism after the meeting, although specific questions about content were referred to Baker.

"I thought it went very well," said Iowa dealer Max Holmes, who had initially expressed some reservation about participating in the committee. "We accomplished what we set out to accomplish, which was getting organized."

The committee adopted as its top priority halting the factory practice of subsidizing fleet sales to vehicle leasing and rental companies. But Baker said it is too early to say how the group will force factories to end the practice.

He downplayed the possibility of resorting to lawsuits and federal legislation to solve the problem. In a taped message distributed to 25,000 dealers last month, Tonkin said both avenues would be explored.

After the Orlando steering committee meeting, Baker said the alternatives of turning to Congress or the courts are "a last resort — absolutely our last resort on this issue."

Asked how the group planned to attack the problem instead, Baker said only that the group would "communicate with the manufacturers. That suggests some kind of compromise. We're just now mapping out how we will proceed."

Baker said a position paper will be published within the next week that will spell out the committee's plans. That paper will also be presented to the more than 300 dealer members of the Rough Riders, said Baker.

The steering committee also pushed the issue of "shifting factory costs" to the top of its grievance list, he said.

"That includes a whole wide range of costs that have traditionally been assumed by the factory, including advertising costs, APR (annual percentage rate) and carrying costs, which are slowly being shifted onto the dealer and which are gradually eroding dealer franchise profitability," he said.

He added that there was no discussion at the meeting of how to address that issue.

Tonkin's group is the latest effort to address complaints that have troubled dealers and factories for years. Manufacturers maintain that dealer grievances can be resolved through individual dealer council groups, but Baker said those councils are ineffective.

"Yes, dealers can bring a limited number of issues to the councils," Baker said. "The manufacturers listen, but the issues seem to stay there. Some issues have been on the table for 10 years. We need the carmakers to do more than listen. We need them to act."

Tonkin's effort to organize a dealer action group since he became NADA president in February has stirred up heated debate among some dealers who contend that a confrontational approach to factory relations would be a mistake. After Tonkin published a list of 200 dealers who he said had expressed support for the group, several on the list said they knew nothing about it and wanted no part of it.

"People have gotten the idea that we are going to be a confrontational group, and that isn't correct at all," Baker said. "What we hope to do is communicate with the manufacturers about what our concerns are. We kept the name 'Rough Riders' because it calls to mind the people who rode with Teddy Roosevelt, who volunteered to do a tough job."

Baker said he expected the process of resolving current dealer-factory squabbles to be a long-term project.

FLEETS

FROM PAGE 1

plants in the United States and Canada.

"As their capacity for retail sales fails to match their production capacity, you will probably see a more aggressive approach to the commercial world," said Bill Willis, Ford Division general fleet manager.

Virtually every leading Japanese importer is eyeing the fleet market except one — Honda. But even Honda may be softening its stand against selling cars to fleets.

"If it becomes necessary, then we will get into it, but we have no plans for fleet sales at present," said a company spokesman.

Meantime, Toyota, Nissan, Subaru and Mazda are organizing dealer delivery systems, rolling out attractive incentives aimed at fleet managers and adding fleet departments.

Mazda is developing a nationwide courtesy delivery program through its 840-member dealer body. It has signed more than 500 dealers. And for the first time it is offering a nationwide incentive program for fleets.

The most aggressive of the Japanese is Toyota, which apparently believes it can convince the nation's police departments to buy Camrys. This summer, it plans to make a return appearance at the National Association of Fleet Administrators' Law Enforcement Seminar/Workshop to pitch police fleet managers.

That would be a real coup because to gain a share of the fleet market, Japanese importers have to overcome an unwritten rule of the fleet industry: Buy American.

James Rallo, senior vice president of sales for Maryland-based PHH FleetAmerica, said 1.5 percent of the company's 1989 vehicle purchases were Japanese vehicles. The company has 285,000 leased or managed vehicles in its fleet. In the 1988 model year, Japanese vehicles accounted for 1.0 percent, up from 0.4 percent in the 1987 model year.

Although the numbers are relatively small, Rallo said there seems to be a growing acceptance of foreign products by American companies.

PHH FleetAmerica is the second largest leasing company in the United States. Its customers are leading American corporations.

Rallo said the company's current equipment recommendation list to customers included Toyotas for the first time in the 1989 model year, and Toyotas again made the list for 1990.

"The Japanese are serious players," he said. "Each year, they are demonstrating their intentions to respond to the fleet community more."

Rallo said the Japanese recognize they have to overcome the "buy American" stigma.

"If I were in an industry hurt by their products, then I might not want to buy Japanese vehicles for my fleet," said Rallo. "But there has been a tremendous turnaround by American companies to give thought to the Japanese because of the number of plants they have in this country and the number of Americans they employ."

Even smaller leasing companies like Mike Albert Leasing, Cincinnati, Ohio, hope to see more imports. Less than 1 percent of its 20,000 vehicles are Japanese vehicles.

"We will try to include some imports on our 1990 selector list," said company Vice President Robert E. Ryan.

One reason for such interest in Japanese vehicles is residual value, which is perceived as being higher on many of the Japanese models than comparable domestic models.

Leasing giant Wheels Inc., based in Des Plaines, Ill. declined to say whether it will put Japanese vehicles on its fleet selector lists.

But George Largay, manager of marketing, said the Japanese are becoming more aggressive even though Japanese vehicles are a negligible part of Wheels' 104,000-vehicle fleet.

"We are seeing an increase in our fleet because the Japanese are aggressive," he said. "They are beating the bushes."

Michigan-based McCullogh Leasing also will put Japanese vehicles on its 1990 selector list for the first time. The company, which says it is the fourth largest fleet leasing company in the United States, has 72,000 vehicles in its fleet portfolio.

"We are including them but only to the extent that they are domestically produced," said Paul Allmacher, vice president of marketing. "It is a very touchy situation because some of our customers are taking a beating from Japanese companies."

He said all foreign vehicles account for about 3 percent of the company's fleet and that there was a small increase in demand in 1988 compared to 1987.

For Japanese importers to be competitive in the fleet market, they have to create courtesy distribution networks using their dealers and make more cars available.

Domestic automakers have had such dealer networks in place for decades, enabling them to deliver a vehicle anywhere in the nation to an employee of a company.

Dealers receive a fee for preparation and delivery.

Toyota began organizing its dealer network for fleets three years ago. Unlike other Japanese importers, Toyota has always made some vehicles — mostly trucks — available to the fleet market.

"Toyota has set up a system to order vehicles and customers receive prompt delivery," said Allmacher. "We are not held to out-of-stock vehicles."

Rallo pointed out other trouble spots the Japanese will have to overcome: giving fleet managers a choice of vehicles and pricing consistently rather than negotiating price with each dealer.

"If we can't factory-order vehicles to customer specifications, then that will be a problem, too" he said.

Yet another hurdle the Japanese have to overcome is that they neglected the fleet market for so long.

"Many daily-rental companies and many commercial companies knocked on the doors of the imports for years, saying they wanted to use their vehicles in their fleets," said James Pirtle, director of fleet sales for Buick. "Distribution and lag time of ordering fleets and shipping across the ocean stopped them (the Japanese) from doing it."

Are the Japanese serious about gaining a share in the fleet market? Domestic manufacturers seem to think so. At any rate, they're watching their Japanese competitors closely.

Said Chrysler's Barton: "I don't know how they can make money. I don't know what their profit picture is per car. But when I see these things and see what they are guaranteeing or willing to pay, I say, 'Wow.' "

Added Jack Losch, director of fleet sales for Pontiac: "They are making deals that are tough. Thank God for the valuation of the dollar — that's helped us out tremendously."

Automotive News Reporters Mary Connelly, Michelle Krebs and David Versical contributed to this report.

CALIFORNIA

FROM PAGE 2

said John Rettie, editor of The California Report. But the significance is not so much Ford outselling GM, but how domestic manufacturers led by Ford are staging a comeback in the state where Japanese importers first established themselves, he said.

"This is where the Japanese got their start, and now there is a swing back to domestic cars," Rettie said.

A GM official dismissed January's California results as a fluke, possibly caused by heavy Ford rental-car sales, and said GM beat Ford Motor Co. by 1,900 registrations in February. But Ford has been making steady gains on GM for 30 months and has been close in recent months.

Ford's strength in California, where import nameplates captured 51.62 percent of the 1988 car market, is reflected in the January results. Ford took 22.57 percent of California new-car registrations in January, compared to its national share of 24.02 percent. Ford Division took 17.07 percent of the California January registrations, compared to its January U.S. sales share of 16.94 percent.

GM's California penetration is well below its slipping national share. GM's January share of California car registrations was 21.76 percent. In total U.S. registrations, GM captured 34.89 percent of the January market.

In January 1988, GM was well ahead in California with 22.27 percent of the car market to Ford's 16.67 percent.

"General Motors took a nosedive in California at the end of 1986 and never seemed to recover," Rettie said. "GM's trend line suddenly went from slightly declining at just under 30,000 a month in 1985 and early 1986 to steady at just over 20,000 a month.

"Meanwhile, Ford has gone steadily upward from just about half GM's sales 30 months ago to take a one-month lead."

Power's figures don't go back more than a decade, "but it might be the first time since the 1920s that Ford beat GM in California car sales," Rettie said. Months when GM was shut by strikes would be an exception, of course. In November 1970, for example, Ford Motor's national registrations was more than doubled GM's and Ford probably won in California, too.

Ford sales executives in California say several models attractive to California buyers are responsible for the recent sales gain.

Mustang, Thunderbird and Probe are especially strong for Ford Division in California, said J.C. Collins, Los Angeles district sales manager.

The sporty, Mazda-built Probe "has been extremely well received since its introduction last May," Collins said. Importantly, Probe has not cut into sales of Mustang, which sells better in California than it does nationally.

Ford decided to continue the existing Mustang model rather than replace it with Probe, which opened a new segment for Ford. "Mustang is still considered the California car," Collins said. "We're getting two different buyers."

Jay I. Stark, executive director of North American vehicle operations, marketing and product planning staff for GM, said GM beat Ford in California registrations by 700 to 3,800 cars per month last fall and by 1,900 in February.

"The aberrant number is January," Stark said. "We beat Ford at the retail level of the business — individual households — but Ford outsold us by a wide margin in fleet sales, and no insignificant part of that is the daily rental business.

"They own a significant interest in Hertz," said Stark, who hinted that Ford may have put many cars into rental service.

Ford also owns a share of Budget Rent A Car Corp. But GM has an ownership interest in Avis Inc. and National Car Rental System.

"As far as February, it's back to a more normal kind of keel for both companies. Let the data speak. Data for January is unusual. We did beat them at the retail sales level," Stark concluded.

But Rettie said the January results are no fluke.

"Ford has almost caught GM two or three other months recently. The question is whether Ford can do it for an entire year," he said.

"If you include truck sales, Ford has a good chance. But cars alone, I don't think Ford will. Ford may hold a lead for the rest of the (1989) model year, but GM has more new product coming this fall than Ford does, and its California marketing is already firming up. I have a feeling that GM will turn it around."

Ford, while enthusiastic, also is reluctant to predict a calendar-year victory in California.

"GM is strengthening on the truck side and (Chevrolet) Lumina is going to be very tough," Collins said. "We had a good month, but can we do it for a whole year? I'll give a qualified yes."

Collins predicted that Ford will continue to gain in California regardless of what GM does. He is forecasting gains of more than one percentage point of market share for both Ford cars and trucks this year for the Los Angeles district, which includes Southern California, Arizona and southern Nevada.

Automotive News Staff Reporter Philly Murtha in Detroit contributed to this report.

U.S. trucks boost lead in '88 Calif. tally

LOS ANGELES — Led by a swing to minivans and larger pickups, domestic trucks increased their lead over imports in the California market in 1988.

Unlike California car registrations, where domestic and import nameplates split the market almost evenly, Big 3 trucks took 68.75 percent of their market last year, up from 61.22 percent in 1987, according to figures provided to J.D. Power and Associates' California Report by R.L. Polk & Co.

The gains were at the expense of the Japanese imports and Volkswagen.

The domestics' gain of 7.53 percentage points was shared fairly evenly by the Big 3.

Registrations of Chrysler Motors' Dodge, Jeep and Plymouth trucks rose 21.2 percent to 107,239, with market share rising to 19.47 percent from 16.95 percent.

General Motors also was up 21.2 percent, to 126,905, moving its share to 23.04 percent from 20.05 percent.

Ford posted the lowest Big 3 percentage gain in volume, up 14.4 percent to 144,386, but that boosted its share to 26.21 percent from 24.18 percent.

Winnebago accounted for the balance of Polk's market-share rundown each year.

BIG 3 CALIF. LIGHT TRUCK REGISTRATIONS

	1988	1987	Pct. change
Chrysler ..	107,239	88,466	21.2
Ford	144,386	126,234	14.4
GM	126,905	104,686	21.2

SOURCES: J.D. Power Forecast Division, R.L. Polk & Co.

While compact pickup registrations in California fell 7.7 percent to 206,914, two other segments jumped in popularity. Full sized pickups rose 21.7 percent to 93,692. And compact vans soared 24.1 percent to 101,057 registrations.

Overall, state truck registrations totaled 550,803, up 5.5 percent from 522,004 in 1987.

The only imports with increased truck sales in 1988 were low-volume sellers Isuzu and Range Rover.

America Isuzu, which has been shifting its marketing emphasis from cars to specialty trucks, increased California truck sales 1.8 percent to 9,573 units, although its market share dropped to 1.74 percent because the state market was up 5.5 percent. British newcomer Range Rover sold 580 units last year, up 56.3 percent.

Total Japanese new-truck registrations dropped 14.9 percent as an unfavorable yen-dollar exchange rate and a 25 percent tariff on imported trucks continued to take a toll.

The biggest hits were taken by Suzuki, Nissan and Mazda.

Suzuki's California truck registrations fell 35.5 percent to 10,054, with market share off to 1.83 percent from 2.99 percent.

Nissan, although most of its pickups are built in Tennessee and are not subject to the import tariff, was off 25.8 percent to 34,002, dropping its share to 6.17 percent from 8.78 percent.

Mazda dropped 16.1 percent to 18,803 truck registrations, with share sliding to 3.41 percent from 4.3 percent.

Subaru, closing out its discontinued Brat, registered just eight trucks last year compared to 239 in 1987.

Toyota's pickup remained the state's most popular vehicle (ahead of Honda Accord) with 66,605 registrations, down from 1987. Toyota fell 8.4 percent to 79,081 trucks, with share slipping to 14.36 percent from 16.54 percent.

VW was off 31.6 percent to 2,224, a share decline to 0.40 percent from 0.62 percent.

Car output holds firm; trucks slip

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled assembly of 160,553 cars last week, slightly above (0.98 percent) the previous week's 159,001 but 2.74 percent below the year-ago week's 165,073.

So far this year, 2,218,853 cars have been built, 10.31 percent more than the 2,011,502 completed last year at this point.

Companies split last week's targeted build as follows: General Motors, 46.53 percent; Ford Motor Co., 26.49 percent; Chrysler Motors, 13.20 percent; Honda of America Manufacturing, 4.83 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.14 percent; New United Motor Manufacturing Inc., 2.49 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.28 percent; Toyota Motor Manufacturing U.S.A., 1.25 percent; and Diamond-Star Motors, 0.79 percent.

Truck production was estimated at 88,836 units last week, 4.14 percent below the the prior week's 92,671 and 4.71 percent below the year-ago week's 93,226.

Year-to-date, 1,342,690 trucks have been assembled, 7.98 percent more than the 1,243,437 built last year at this time.

Cadillac's Allante line was idle last week to cut inventories. Output was expected to resume today.

GM's Doraville, Ga., plant and Reatta Craft Centre in Lansing, Mich., are expected to reopen today. Both were idle to reduce inventories.

Chrysler's Jeep Grand Wagoneer line in Toledo, Ohio, was expected to resume operations today. The line was shut down to cut inventory.

GM scheduled overtime last Saturday at its plants in Lansing, Mich., Arlington, Texas; and Oklahoma City.

Ford slated overtime last Saturday at its Lorain, Ohio, car plant.

Truck total dips 13% in Canada

Last week's scheduled Canadian truck output dipped from the prior week and year-ago week as one plant was idle because of slow sales.

Targeted production of 18,787 trucks dropped 13.40 percent from the previous week's 21,695 and fell 6.81 percent below the year-ago week's 20,159.

Year-to-date, 299,773 trucks have been built, 5.04 percent more than the 285,394 completed last year at this point.

Chrysler Motors' Pillette Road plant in Windsor, Ontario, was shut down last week for inventory adjustment. The plant assembles the Ram Van and Ram Wagon.

Canadian automakers scheduled production of 22,696 cars last week, 2.20 percent more than the previous week's 22,208 but 3.97 percent below the year-ago week's 23,634.

So far this year, 297,055 cars have been assembled, 13.06 percent below the 341,671 built last year at this time.

MPVs top most cars on resale

Minivans, utilities rival luxury autos

By Dutch Mandel and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

The next wave of television commercials touting a vehicle's high resale value may show the smart owner stepping out of a sport-utility vehicle or a minivan rather than a European luxury car.

A study of randomly selected year-old premium sport-utility vehicles and minivans shows the majority retaining their value better than many domestic or imported cars, and a few rival the values of year-old luxury imports.

Two 1988 domestic sport-utility vehicles and a minivan dropped only 10 to 12 percent, about $1,900 to $2,200 in 12 months.

That's less than half the average loss for a one-year old car, according to William Geen, vice president of CCC Information Services of Chicago, an automotive data services firm. The study, prepared for Automotive News, compared manufacturers' suggested retail prices for new 1988 model vehicles with the used values of similar vehicles as of March 1, 1989.

Top performers in the sample were a year-old Chevrolet Suburban Silverado and a Chevrolet T10 Blazer Tahoe. Both held their retail values nearly as well as a year-old Jaguar XJ-S and better than a 1988 Mercedes-Benz 300E.

The two Chevrolet vehicles lost 10.22 and 11.52 percent, respec-

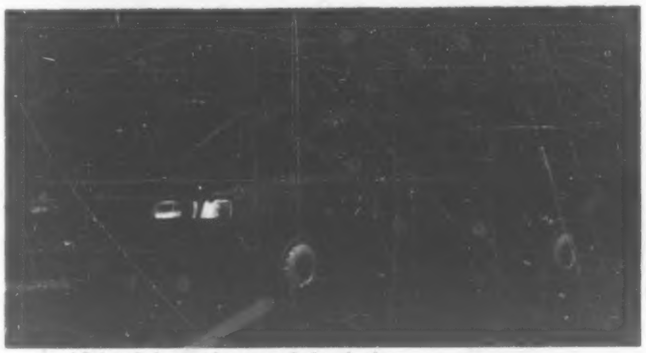
Intro 1990: A decade dawns

Chevrolet's Lumina bows with a fleet incentive. . .

AUTOMOTIVE NEWS/JOE WILSSENS

. . . while Nissan's 300ZX hopes to recapture the spirit of the original Z-car . . .



. . . and Subaru's Legacy is aggressively priced

New models map makers' strategies

Just past the midway point in the 1989 model year, four manufacturers introduced 1990 models last week, each model crucial to its maker's strategy for the coming decade.

And the success or failure of any of those models will play a significant role in reshaping the industry.

The quartet, Chevrolet Lumina, Nissan 300ZX, Subaru Legacy and Honda Integra (which is sold as an Acura in the United States), enter an uncertain, incentive-riddled market that some analysts believe may have seen its best days.

Each car is important to its manufacturer for different reasons.

Chevrolet is expecting its Celebrity replacement to sell at a rate of 350,000 units per year. When joined by its version of General Motors' all-purpose van, the Lumina line is being counted on to provide more than a half-million units per year in sales for the division.

But the sedan's conservative styling in an era of rapidly changing products is a gamble. Chevrolet officials say that family-car shoppers prefer a more traditional look. The division is also counting on Lumina to perform the same yeoman service performed by Celebrity in fleets. As a result, it isn't taking any chances, offering a $650 fleet incentive as the car is introduced.

Subaru of America, which has quietly plied its niche as a pioneer in four-wheel-drive passenger cars and consequently watched its sales erode as others jumped on the bandwagon, is apparently ready to break out of that mold with its new Legacy. Aggressively priced at $11,299 for its base sedan and $13,699 in 4wd trim, Subaru is aiming squarely at Honda Accord, Toyota Camry and Mazda 626 with its new model.

Subaru is counting on the low introductory price to enable the company to break its dependence on incentives, programs costing $97 million per year over the last two years, almost equal the company's advertising budget. In fiscal 1989's first quarter, the publicly traded importer lost $12.3 million.

Fuji Heavy Industries, which owns a 49 percent stake in the dis-

Honda's new four-door Integra replaces a five-door hatchback model

GM increases option prices

Some package discounts die; buyer rebates sweetened

By Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors has boosted prices by charging more for popular items of optional equipment. At the same time, the automaker sweetened its cash incentives for buyers.

GM hiked the prices of stand-alone options. In addition, all GM car divisions except Chevrolet have eliminated some discounts on options grouped in packages. The divisions said that eliminating those option-package discounts allowed them to increase the amounts of cash rebates.

Ford Motor Co. and Chrysler Motors made no changes in incentives. Chrysler earlier this year increased prices of some options on selected models. Ford has made no pricing changes.

The pricing action left GM dealers baffled and, in many cases, angry.

Dealers say GM's recent actions make selling a vehicle even more confusing than before. They complain that price increases on options aren't uniform — they vary by division and by model; elimination of discounts on packages also varies by division and model; and the incentives are confusing.

Cash rebates on some models, for example, vary in amount — based on whether a dealer wants to contribute — and vary from state to state depending on whether a regional incentive is in effect in addition to the national incentive.

At the very least, the timing — in the midst of the spring selling season — is poor, they say.

"I think they are bringing it out at the wrong time," said Greg Meyer, general sales manager of Coast Cadillac in Sarasota, Fla. "Price increases then rebates to move the inventory?"

Said a Chevrolet dealer in Texas who didn't want to be identified: "I don't understand how they can up the rebates one day and increase prices the next. . . . The only thing the customer is going to hear is the price increase, and they're going to look elsewhere. They'll think the worst."

GM said the price increases on options were necessary to recover substantially higher costs for wages and materials, particularly aluminum.

Price increases on stand-alone options, effective April 17, generally ranged from $5 to $100, although leather trim on the Pontiac Bonneville SSE was raised $300.

Price hikes included such commonly ordered

Japan ships less than full quota

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japan's car shipments to the United States last year dipped about 120,000 units below the self-imposed 2.3 million quota, and Nissan Motor Co. accounted for most of the shortfall.

It was the second year in a row Nissan's shipments were below quota.

Preliminary figures gathered by the Japan Automobile Manufacturers Association indicate the final tally will be 2.17 to 2.18 million units for the 12 months ended March 31, the period covered by the voluntary export restraint agreement.

Swang song due for GM's geese

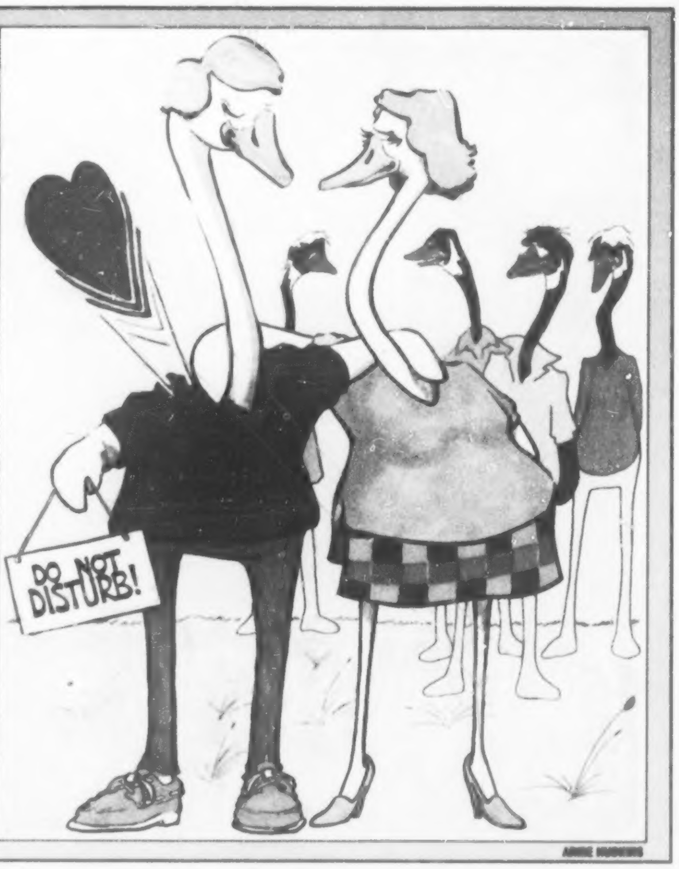
WARREN, Mich. — Hundreds of Canada geese have taken over a 20-acre lake at the General Motors Technical Center where cuter, tidier ducks would be preferred as tenants.

Site Operations Manager Joseph J. Bieda wants the geese to fly off and stay away. He said ducks are not only cuter and more fun but are less damaging to plant life.

The presence of nesting swans will make geese leave an area, so GM took that approach last summer. But the two swans proved to be males, so this year, a male and female were moved in. Bieda hopes they'll get in a family way, flex their territorial muscle and drive off the 225 or so pesky geese.

Canada geese are protected by law, and in past years the Michigan Department of Natural Resources has helped GM round up the geese periodically, Bieda said.

— Roger Rowand



DO NOT DISTURB!

Big '90 Chryslers offer sporty flair

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors' Y-body Fifth Avenue sedan will bow in the 1990 model year in both luxury and sport versions.

The Chrysler Fifth Avenue GTS will be offered with a 3.3-liter V-6 engine, four-speed automatic transmission, leather seats, sport suspension and 15-inch aluminum wheels, according to information the company made available to fleet buyers. The luxury version of the Fifth Avenue shares the same engine.

Use of the 3.3-liter V-6, which is being built by Chrysler in Trenton, Mich., marks a milestone for the company. Until the upcoming 1990 model year, Chrysler relied on Mitsubishi Motors for V-6 engines and has suffered in the marketplace because demand outstripped supply.

Chrysler also will use its new V-6 in the Chrysler Imperial Y-body sedan, scheduled to debut this fall. This flagship model has thicker front and rear door glass to reduce noise and an optional rear air suspension. Chrysler will offer an electronic navigation system for the first time as part of an electronics option package on the Imperial.

The Y-bodies are stretched versions of the C-body Chrysler New Yorker and Dodge Dynasty. The Y-bodies ride on a 109.3-inch wheelbase, compared with the C-body's 104.3-inch wheelbase.

Chrysler will continue to use Mitsubishi's 3-liter V-6 in the C-bodies during the 1990 model year. Chrysler-badged models will be the New Yorker Landau and New Yorker Salon. The New Yorker Salon replaces the New Yorker. Dodge will continue to offer base and LE versions of the Dynasty.

Chrysler's own V-6 will be available in the Chrysler Town & Country minivan debuting this summer. The Town & Country, an upscale model available only with the extended wheelbase, also will be offered with Chrysler's 2.5-liter four-cylinder turbocharged engine with three-speed automatic transmission.

The Chrysler V-6 also will be available in the Plymouth Grand Voyager and Dodge Grand Caravan. The Mitsubishi V-6 will remain an option in the Plymouth Voyager and Dodge Caravan.

The 2.5-liter four-cylinder turbocharged engine will continue to be used throughout the minivan lineup.

As expected, Chrysler told fleet buyers that the A-body sedan (Plymouth Acclaim/Dodge Spirit) will be available in a Chrysler version as a 1990½ model. The Chrysler LeBaron Landau, as it will be called, replaces the Chrysler LeBaron GTS, which went out of production in March.

A Dodge version of the Eagle Premier also will bow at mid-year. A 2.5-liter four-cylinder engine with four-speed automatic transmission will be standard on LX models. A Renault-built 3-liter six-cylinder engine with five-speed manual will be standard on ES models.

Chrysler also plans a mid-1990 introduction of a Dodge Shadow convertible. The company did not mention a convertible version of the companion Plymouth Sundance but Chrysler Motors has considered such a model.

In addition, an ES sport model of the Mitsubishi-built Summit sedan will join the Eagle lineup in 1990.

Chrysler told fleet buyers that it has improved suspensions throughout its lineup. The 1990 vehicles also include added air bag and passive restraint systems.

Chrysler Motors President Robert Lutz has said the additional passive restraint content in 1990-model cars will increase vehicle prices.

"There is no cheap system on that," Lutz said, referring to passive restraints.

Chrysler Motors Chairman Bennett Bidwell agreed on the impending higher prices.

"I do not see how the industry can hold the line on 1990 model prices versus 1989," Bidwell said earlier this month. "I'm sure it will stay under the Consumer Price Index as it has for several years now but I don't see a scenario where we can hold the line."

Chrysler raised 1989 model-year prices 2.3 percent on a comparably equipped basis and 3.9 percent on a base model to base model basis.

Chrysler raps Jeep re-export in Germany

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER
